Clean air could limit stick shifts

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Tougher emissions standards proposed in the Bush clean air bill would limit and possibly eliminate manual transmissions in some powerfu[illegible]orty cars and light-duty pickups.

Manual transmission versions of certain General Motors V-8-powered autos and light-duty trucks have less than a 50 percent chance of meeting the emissions standards proposed in the bill, said Samuel A. Leonard, director of GM's automotive emission control environmental activities staff.

A Ford Motor Co. emissions expert said it was getting significantly tougher to get certain powerful manual-transmission cars through the 7½-mile emissions test. But he said few of Ford's cars with multi-port injection systems are in serious danger. Manual-transmission Ford trucks are in more of an emissions pinch, he said.

Ford and GM experts refused to identify troublesome car and truck models. But one expert referred to them as the heavier, rear-wheel drives with V-8s and turbocharged V-6s.

"What we're talking about are the vehicles that enthusiasts tend to feel very passionately about," he said. "And this is a very real problem. There have been times in the past when we haven't offered manual transmission in certain powerful, sporting vehicles destined for the California market." California has tougher emissions standards than the rest of the country.

Although not identified as such, Ford's Mustang and Chevrolet's Camaro and Corvette fit the engineers' description of vehicles likely

Big 3 price hike expected to average $430 on 1990 cars

DETROIT — Automotive News estimates that prices of Big 3 passenger cars will rise an average of $430 when the 1990 models are introduced.

The average increases are estimated at $525 for General Motors, $360 for Ford Motor Co. and $250 for Chrysler Motors.

The estimate is based on tentative prices of comparably equipped models disclosed by Chrysler and Ford and pre-introductory prices announced by GM.

2-part GM boost adds up to $525

DETROIT — General Motors last week said that pre-introductory prices of its 1990 cars will rise an average of 3.4 percent above the final prices of 1989 models. Automotive News estimates that the hike amounts to $525 per car.

GM divided its 3.4 percent boost into two parts. The first segment is what it called an "economic increase" of 2.5 percent on comparably equipped models. The corporation said that will "provide for the partial recovery" of higher costs of materials, labor and health care.

The second part is a hike of 0.9 percent to cover the cost of making passive restraints on all models.

Federal safety standards require passive restraints on all 1990 cars sold in the United States.

GM said air bags will be standard or optional on 15 of its car lines. Its other cars will have passive belts.

GM said destination charges will not be changed on its 1990 autos.

GM was the last of the Big 3 to disclose pricing plans for the 1990 model year, which is a departure from the industry practice of some years ago.

In earlier days, GM set the pattern on the pricing of new models. Ford Motor Co. and Chrysler Corp. sat on the sidelines until GM announced its prices.

"It was an indication of GM's total domination of the domestic industry," a veteran price analyst remarked last week.

AUTOMOTIVE NEWS/JOE WILSSENS

Ford Chairman Donald Petersen greets shareholder Roscoe Byrd in front of a 1990 Town Car at the annual meeting. The price, just announced: $27,315.

Ford increase is 3-12 percent

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. has given its dealers tentative 1990 prices showing increases of 3 percent to 12.28 percent on base models in its various car and light-truck lines.

Automotive News estimates that the average increase for 1990 Ford vehicles is $360 on comparably equipped models and $680 without adjusting for equipment changes. Ford would not give dollar amounts.

Standard-equipment changes such as the addition of driver- and passenger-side air bags and anti-lock brakes on some models contributed to the price hikes. In addition, Ford said its material costs have risen.

In the Ford Division car lineup, tentative increases range from 3.18 percent on Ford Thunderbird ($15,076 for 1990) to 7.91 percent on Crown Victoria ($17,706).

On light trucks, not including F-250 and F-350 models, price increases range from 5.29 percent on Ranger ($8,100 for 1990) to 12.28 percent on Econoline vans ($12,848). Anti-lock brakes will be standard equipment on Econoline vans in 1990.

In the Lincoln-Mercury lineup, tentative increases range from 3 percent on Mercury Cougar ($15,911 for 1990) to 6.86 percent on

Chrysler prices up 5 percent

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors has tentatively increased prices of 1990 domestic cars an average of 5 percent over prices of 1989 models, with much of the boost due to making air bags standard equipment.

Omar Matt, Chrysler Motors manager of competitive pricing and analysis, said the overall increase amounts to an average of $700 per car, but he said about $450 of that is for air bags, which are standard on almost all of Chrysler's U.S.-built 1990 autos.

Matt said, "The increase is 2 percent on a comparably equipped basis, including air bags as standard, which is $450 a unit. Taking out that value would make the increase 5 percent."

Matt

He said Chrysler is not passing along to customers the full air-bag price tag, but he declined to specify the full cost.

General Motors and Ford Motor Co. offered passenger-side air bags on selected 1989 models as an option costing about $800.

The new Chrysler Imperial lux-

GM may let Camaro, Firebird die

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

TRAVERSE CITY, Mich. — General Motors may decide to let the present Pontiac Firebird and Chevrolet Camaro die a natural death rather than replace them in the 1990s as once planned.

Lloyd Reuss, GM executive vice president in charge of North American automotive operations, said here that the next-generation F-car, as it is code-named, is again stalled in the early planning stages.

Reuss said the vehicle remains in Phase 0, the first phase of GM's product planning process, maintaining its original theme as a rear-wheel-drive car. But he said the future of the vehicle is affected by stricter fuel economy and anti-

BMW names Gerlinger to top U.S. job

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

WOODCLIFF LAKE, N.J. — BMW of North America named a new president and chief executive officer as part of a worldwide restructuring that began last spring.

Karl Gerlinger, 50, who had been operations director for BMW sales and operations in Central Europe, succeeds Gunter Kramer. Kramer continues as chairman.

Gerlinger will eventually succeed Kramer as chairman. Kramer, who will be 59 Oct 1, faces mandatory retirement at 60.

"I have another year to go. It's better to put the successor in place ahead of time so there can be a smooth transition. That's the goal for the rest of my tenure here," Kramer said following last week's announcement.

In a related move, Kramer also stepped down as BMW AG's board member in charge of export sales, creating an opening that will allow the West German company to complete its plan to restructure its world operations into four regions.

Each has a regional director who has full responsibility for the sales and profit performance of his region. Previously, the local companies were assigned to different management board members, and there was a separate department to coordinate independent importers.

Region 3, North America, was the last of the four regions to be assigned a regional director. Kramer had been sharing those duties with Robert Buchelhofer, who is worldwide manager of sales and marketing and a member of the parent company's management board.

Gerlinger

Buchelhofer becomes regional director for North America, the only region in the world directly represented on the board. BMW's Canadian subsidiary continues to be a separate company, reporting to him.

The other regions are Region 1, which includes West Germany, Austria, Switzerland, Holland and Belgium; Region 2, which covers Italy, France, Spain, Great Britain and Scandanavia, and Region 4, which encompasses South Africa, Japan, Australia, New Zealand and South America.

Kramer said he is relieved to give up his double duty on the

Corrections

- Schott Fiber Optics, maker of Massachusetts Institute of Technology's solar-powered racer's fiber optic rear-view system, is in Southbridge, Mass., not Southfield, Mass., as reported Aug. 7.
- A chart on Page 52 of the Aug. 7 issue should have said that employment at Nissan Motor Manufacturing Corp. U.S.A., excluding salaried workers, is 2,400. The plant's annual capacity without overtime is 240,000 units and is expected to rise to 440,000 by 1992.

POPULAR MECHANICS/JIM DUNNE

The biggest factor in renaming Bronco II was a Ford decision to drop Roman numerals from vehicle names.

EXPLORER: *Ford's Bronco II will be renamed when new model debuts next spring*

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

After spending a considerable amount of time and money defending it, Ford Motor Co. will drop the Bronco II name when the sport-utility's successor debuts in the spring of 1990.

The redesigned Bronco II two-door and its new four-door sibling will be called Explorer, a name now used on Ford Ranger value-leader models.

The announcement comes three months after Consumer Reports magazine rated the Bronco II "poor" because of its "unsettling" behavior during the magazine's vehicle testing procedures. Ford vigorously defended the Bronco II and conducted its own tests based on those used by the magazine.

Henry Fradkin, Ford Division marketing plans manager, said the Consumer Reports story on the Bronco II played a small role in the name change. That does not affect Lincoln-Mercury Division, which markets the Lincoln Mark VII.

"Too many numbers came into play, it was very cumbersome to say," said Fradkin, who added that the division once sold Mustang II and LTD II models.

The new four-door and redesigned two-door gave Ford Division "a good opportunity" to use a new name and apply it to the whole vehicle family, according to Fradkin. The Bronco II designation will continue to be used on all 1990 carryover models.

The decision to use the Explorer name was made last month after research on the name was complete. Fradkin said the Explorer name, which has been used on both the Ranger and F-series trucks, conveys characteristics such as fun-to-drive, utilitarian, independent, good value and adventurous.

Ford has learned some valuable marketing lessons from other automakers about new names.

"There is a proliferation of new products; it's hard to name a product without finding someone else who owns the name as Lexus found out," said Fradkin, referring to the legal battle between Toyota's luxury division and Mead Data's Lexis computer service over the use of the name Lexus.

"We already own the name Explorer and it fits the kind of image we wanted for the vehicle," he said.

Ford will introduce the Explorer name with a heavy advertising and merchandising campaign that is being developed for next spring. Because of corporate average fuel economy considerations, it has not been decided whether the Explorer will be a 1990 or 1991 model, a Ford spokesman said.

Lexus dealers resist padding stickers

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Initial sales are strong for Lexus models, but dealers appear to be resisting the temptation to add a "pack" above sticker price.

Unlike Mazda Miata, whose low price and limited availability translated into dealer add-ons, the higher-priced Lexus, also in limited supply, seems to be rolling out at sticker or below.

"A lot of my first buyers are long-time customers and personal friends," said Edward Eskridge, principal of a Lexus dealership in Oklahoma City. "Why would I upset them by selling over sticker for a few quick dollars?"

The fact that Lexus is a new brand may be a factor, said one analyst.

"This is a critical period for Lexus dealers and the taste they leave in customers' mouths will last a long time," said Christopher Cedergren, senior automotive analyst at J.D. Power and Associates, Agoura Hills, Calif.

Lexus dealers were also chosen in part for their financial strength and they can afford at this point to be patient, he added.

"We're selling them at manufacturer's suggested retail," said Dan Frogge, a sales manager at Carl Sewell Lexus in Dallas.

"We could sell them for more than sticker, but we aren't and we won't. None of our dealerships operate that way," Sewell said.

Lexuses are going out the door at sticker at Germain Lexus in Columbus, Ohio.

"A lot of customers are a little surprised that we aren't adding any charges above sticker, especially after the publicity about dealer packs on Mazda Miatas," said Sharon Whitaker, sales business manager at Nesen Lexus, Westlake Village, Calif.

See LEXUS, page 35

Toyota to sell Lexus in Europe

By Jean-Jacques Renaux
STAFF CORRESPONDENT

DUSSELDORF, West Germany — Toyota Motor Corp. will introduce the Lexus LS400 to Europe by the spring of 1990, but its bid in the European luxury car market is much more modest than the U.S. effort.

Toyota aims to sell some 2,000 LS400 models in a full year, against a goal of 40,000 in the United States in 1990, according to Shiro Sasaki, executive vice president of Toyota's research and development. Toyota has no plans to market the smaller ES250 in Europe.

Toyota does not intend to set up a special Lexus dealer network in Europe as it has doine in the United States. Selected Toyota dealers in Europe will sell the LS400 along with the rest of the Toyota line, although they will be asked to invest in better service facilities.

The main marketing tool will consist of direct mail, said Eugene Paesmans, marketing manager for Toyota in Belgium. Television and other mass media will be avoided.

Toyota quoted no prices but, according to the Belgian distributor, the LS400 will retain a substantial price advantage against its main European rivals.

Several European distributors are disappointed with the low allocation of cars, confident that the LS400 could fare better. But, Sasaki said, current production capacity of the LS400 is 50,000 with 40,000 earmarked for the United States in 1990.

PN38 is now plainer plan for Ford

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

TRAVERSE CITY, Mich. — Ford Motor Co's ambitious PN38 truck project is alive, but it has "substantially changed its complexion," said the president of Ford's Automotive Group last week.

Executive Vice President Philip E. Benton Jr. said the program has been stretched out over a longer period of time and may yield more products than previously planned.

But industry sources said a key element in the original plan, using a single "flexible" platform for virtually all its light trucks, including vans, has apparently been scrapped.

The first of the models to be developed under the umbrella code PN38 was to have appeared in about 1993, with others arriving in the following five years.

"Because of our workload, we had to stretch out our plans," Benton said. "The PN38 as originally conceived tended to peak a number of new products at one point in time. So we've had to stretch them out."

But industry sources say the project they knew as PN38 no longer exists. In its place, they say, Ford has pencilled in programs

Automotive News promotes Kranz; Sawyers joins staff

Automotive News last week promoted Rick Kranz to chief editor, copy desk and announced that Arlena Sawyers has joined the paper as a staff reporter covering marketing and advertising.

Kranz, 41, had been a copy editor since joining the staff in 1986. Before joining Automotive News, he was with the Rockford (Ill.) Register Star, a Gannett newspaper, from 1981-1986, where he served as reporter, copy editor and automotive columnist. In 1985 and 1986, his weekly columns — including car reviews, buying tips and industry news — were carried by the Gannett News Service for distribution to the chain's 93 dailies. He was co-editor of the news service's 1985 and 1986 auto preview and its 1985 automotive centennial projects.

Mazda seeks a new leader; second-channel OK near

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — A year after combining two regional companies into a national concern, Mazda Motors of America is searching for a new U.S. executive to unite sales, marketing and distribution operations under a single command.

That position could become even more critical. A top official said last week that company studies are pointing toward Mazda launching a second distribution channel as early as 1992.

The search is focusing on outside import executives experienced in running entire automotive operations, sources inside Mazda say.

But two senior Mazda Motors of America managers are also being considered. They are George McCabe, deputy general manager and group vice president for sales and marketing, and James Seidel, deputy general manager and group vice president for operations.

"This essentially fills in an open position," a source inside the company said.

"It's awkward having sales and marketing split apart from dealer operations and administration and no one directly in charge of both parts."

Company sources expect a general manager to be selected within a month. That would put the executive in place before Mazda makes the final decision by December on whether to launch a second, upscale division.

McCabe said that research and product development so far points to Mazda's "pulling the trigger" and launching an Acura-like luxury division by 1992.

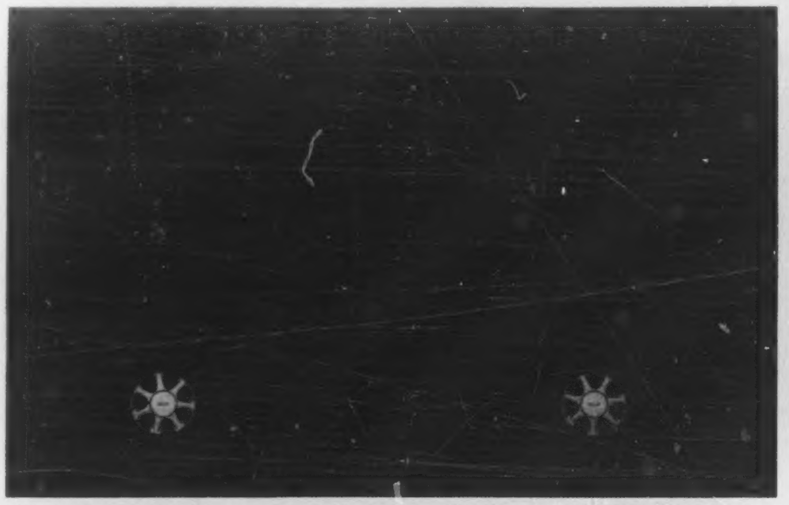
McCabe

Richard Colliver, senior vice president for the Western area, has been appointed head of the Mazda Motors of America task force for the second-channel feasibility study, McCabe said.

Colliver's role is similar to those held by the current heads of Lexus and Infiniti before those two operations were announced in 1987.

Last year, Mazda combined a U.S. sales operation that had consisted of Mazda Central, headquartered in Irvine, Calif., and Mazda East, headquartered in Jacksonville, Fla. The two distributors were formed when the Japanese parent company, Mazda Motor Corp. (then called Toyo Kogyo), was nearly forced out of business in the mid-1970s.

Combined car and truck sales in the United States in calendar 1988 were 343,620 vehicles, up 3.5 percent from 331,724 in calendar 1987.



"We decided not to build any more small cars," says Mazda's ad for the 1990 323 Protege.

Mazda ads shift from price to quality

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Mazda Motors of America's new corporate image program, dubbed "It just feels right," began today, kicking off a three-week ad blitz.

The centerpiece spot, in 30- and 60-second versions, shows a test-car driver wired up and monitored by a "mission control" team as he puts a car through its paces. The twist is that what's being tested is not the car's performance, but how it makes the driver feel.

Mazda believes it can compete successfully with Toyota and Honda, but it does not have the public image necessary to go head-to-head with those two brands in advertising, said Janet Thompson, Mazda advertising vice president.

So Mazda "will change the ground rules" and put its advertising creative focus on the concept of "Kansei engineering, taking into

Recessions or boom times, auctions keep on growing

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Though the auto industry is highly susceptible to the ups and downs of the economy, one small segment contends that is recession-proof. It is the auction business, a segment that operates almost in the shadows of the industry.

Vehicles flowing from dealers, manufacturers, fleets, banks, captive finance companies and daily rental car companies to dealer-only auto auctions abound in good times.

And in bad times, vehicle repossessions pick up the slack.

"GE wasn't in the auction business then, but auto auctions were immune to the recession that began in 1981." said Mike S. Zafirovski, president of GE Capital Auto Auctions.

"What auctions lose in trade-in volume from the used-car side in a recession, we make up for in significant increases in repossessions," he added.

The decade has been favorable to auto auctions, with annual growth rates hovering at about 10 percent until 1987 when they settled to 7 percent where they have stayed.

For the next five years, Zafirovski predicts unit sales for GE auto auctions will increase 6 to 7 percent annually with revenues growing at a slightly higher rate.

Driving the growth has been the huge number of "program vehicles" — cars sold to daily rental companies by the automakers with a guaranteed depreciation rate or repurchased and then remarketed at auctions.

"Beginning in 1985, a tremendous volume of vehicles hit the auctions from the manufacturers in the form of rental cars, but there was also a steady stream of increases from leasing companies," said Darryl Ceccoli, executive vice president of Manheim Auctions.

More than 760,000 factory vehicles will go to the auctions this year from both import and domestic automakers. Some are "brass hat" or employee lease vehicles, but most are program cars.

General Motors will remarket approximately 250,000 program vehicles through the auctions, up from 204,000 a year ago. Ford expects to remarket 155,000 vehicles

CHINA: *Leaders still woo West despite violence in June*

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

TRAVERSE CITY, Mich. — The Chinese government is continuing talks to expand existing ventures with U.S. and European automakers despite June's crackdown to quell student unrest.

Li Yinhuan, vice chairman of the China National Automotive Industry Corp., said "nothing has changed" with government plans to develop the country's auto industry even though a number of foreign auto executives fled the country after student demonstrations were violently suppressed by the government.

But Li said industry operations are normal and the return on investment achieved in existing joint ventures has prompted those companies to consider expanding their cooperative arrangements.

He said China is negotiating with General Motors to open a foundry and with Peugeot SA and Audi to produce small cars.

China's Second Auto Works is negotiating with Peugeot for production of a Citroen model using an engine smaller than 1.6 liters, Li said, adding that the car would be produced in central China.

Peugeot already builds trucks and 505 wagons in Guangzhou province.

Li said negotiations are under way between Second Auto Works and Audi to build a car smaller than the Santana produced by Audi's sister company, Volkswagen AG at Shanghai-VW.

Audi also has a deal to build its 100 models with First Auto Works.

GM's talks to ship used foundry equipment to China complements its earlier agreement sending 2.2-liter engine tooling to China.

Production of that engine is slated to start within two years, Li said.

Li said China expects production to reach 1.7 million units, including 700,000 cars, by the year 2000.

China made 640,000 units in 1988.

Dealer sues for $200 million, says bank scared buyers

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — A multi-franchise dealer in Connecticut has sued his bank for $200 million in damages. He accused the bank of taking over his business, including placing a 24-hour guard on his inventory.

The complaint filed by Joseph Caldrello said, "Numerous retail customers have been scared away" as a bank representative on the premises has "interrogated" customers and their lenders.

In turn, Connecticut Bank and Trust said it is merely protecting its investment.

The bank claimed Caldrello's dealership, T.N.M. Lathrop Porsche-Audi-Jaguar in Groton, Conn., owes it $2 million and sold cars out of trust last year.

A dealer is out of trust when he sells a car and does not immediately pay off floorplan financing on the vehicle.

Caldrello also owns Acura, Pontiac/Volvo, Mercedes-Benz and Honda stores in Connecticut, as well as a Hyundai dealership in Rhode Island; a Porsche-Audi dealership in New Jersey; and two Mitsubishi dealerships outside Los Angeles.

Caldrello's attorney, Philip R. Mancini III, denied his client sold vehicles out of trust.

Ross Fingold, a Hartford attorney representing the bank, said his client's relationship with Caldrello has been "long and stormy."

Fingold said the problems date back to 1986 when the Connecticut bank accused Caldrello of a "substantial default" for selling cars out of trust.

While that situation was "cured," according to Fingold, the bank gave the dealer three years to find floorplanning from other sources.

Cadrello found financial sources for all his stores except the Porsche-Audi-Jaguar point, which is still handled by the bank.

Caldrello's attorney said the bank alleged there was another default in October 1988, and the conflict came to a head when Connecticut Bank and Trust demanded that Caldrello sign an agreement never to sue the bank.

Mancini said Caldrello refused and the bank accused him of breaching his dealer security agreement.

Caldrello denies he was in default at the time of the October 1988 dispute, the attorney stated.

Caldrello's complaint said the bank stationed its employees at the dealership and took over the keys to all vehicles, as well as related paperwork and titles.

The Connecticut bank required its approval for all wholesale purchases and retail sales, the complaint states.

Further, the bank collected all proceeds from car sales, without setting money aside for sales tax, registration, credit insurance or service contract premiums, Caldrello charged.

Mancini has filed a request for an injunction that would prevent the bank from seizing the dealership's Porche-Audi-Jaguar inventory, though so far the bank has not indicated that it wants those vehicles.

Starcraft's exports fuel sales boom

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Starcraft Corp. of Goshen, Ind., expects to sell about 15,000 van conversions in the 1989 model year, up 45 percent from a year earlier.

The company didn't have precise figures for early 1990 model orders, but initial chassis allocations will be as big or bigger than last year, said Joseph Schulte, executive vice president.

Starcraft has been in a slightly different position than its major competitors this year because nearly 20 percent of its volume is exported, said Ron Chevalier, vice president of sales and marketing.

Thus, it hasn't had to use incentives as heavily as some competitors that depend solely on the U.S. market for growth.

"We earned that" export business, Chevalier said. General Motors "didn't just give it to us because we were big in the U.S."

Starcraft jumped into the international market early and worked through prescribed channels with GM Overseas Distribution Corp.

It built its organization through GM's worldwide distribution operation and went directly to overseas dealers in setting up its network.

Some Starcraft people work full-time on the overseas operation. One sales representative lives abroad, servicing foreign accounts in Europe. Starcraft also ships units to Saudi Arabia, Kuwait and Japan.

Chevalier said overseas business is not as easy as it looks:

"The whole thing gets very complex. We build a special package, for example, for overseas. Then there are different taxes and tariffs as you cross the borders" along with various other marketing, sales and legal procedures.

Mark III, Glaval strong despite flat market

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

The van conversion market is clearly headed for a major shakeup in the 1990 model year.

But despite the financial difficulties being encountered by many smaller — and even some mid-sized converters — the industry's top guns are targeting big sales increases for the upcoming year.

In a market that is likely to be flat at best, the majors will be expanding directly at the expense of weaker competitors, exerting even greater pressure on them.

Mark III Industries of Ocala, Fla., and Glaval Inc. of Elkhart, Ind., for example, expect to continue to roll along.

Mark III, the industry's highest-volume firm, converted 27,500 vans in the 1989 model year, up 29 percent from 1988, according to Thad Boyd III, company chairman.

The firm's 1990-model chassis orders are 30 percent ahead of last year. It plans to convert nearly 36,000 vans next year.

Mark III will be out of 1989-model chassis by Aug. 25, Boyd said.

It has a backlog of unfilled orders for 1989 vans and will receive chassis until Aug. 15 to fill them. It normally takes about 10 days for the firm to build and ship finished chassis, Boyd said.

He sees 1990 as a good year for his company.

"We've done well during the past four to five months, even though the overall market has been tough," Boyd said.

He said he thinks 1990 will be a "fairly quiet year," without any industrywide growth. However, if Detroit goes for a "significant" price increase, it could send sales into a downturn, he added. He declined to be specific on the amount of a price increase that might hurt the industry, saying simply that "any significant increase will have some impact on sales."

"We're getting ours (sales gains) from other people," Boyd said, referring to his company's growth this year at competitors' expense.

Mark III's size — and growth — is the more remarkable since the company has consignment pool accounts only with Chevrolet and Dodge. It has applied for pools with GMC and Ford, but an additional pool account will not hasten the company's growth, which has been increasing at a planned, steady rate.

"The four pools would definitely give us the ability to grow faster, but 30 percent a year (growth) is about as much as we expect to do regardless of where the numbers come from. We want to maintain controls over our products and dealer satisfaction. We don't want to grow too fast," Boyd said.

Product improvements and competitive pricing continue to be the focal points of its marketing strategy.

The firm is not interested in setting up plants anywhere else in the country or in acquiring any other van conversion firms.

"We won't even consider the facilities of anyone else or setting up our own anywhere else," Boyd said. "We just feel we can do a better job under one roof right here."

Mark III ships vehicles to 48 states from Florida.

Glaval, which is running neck-and-neck with Starcraft Corp. of Goshen, Ind., for the No. 2 spot in industry sales, has almost doubled its sales in the 1989 model year and is targeting a sizable gain for 1990.

William Becker, Glaval's vice president of marketing, advertising and consumer relations, said the company sold out its allotment of 1989 model chassis. It will finish the model year with about 15,500 to 15,600 sales, up from 7,800 a year earlier. It is targeting 25,000 sales in 1990.

"It was a very good performance, and we managed to stay profitable in the process," Becker said.

General Motors and Ford incentives on conversion units were helpful, although a little late. Still, their timing, ironically, might have some additional benefit for the industry, Becker said.

"It worked out that the incentives came when the cost of money was going down, and there was renewed confidence for purchases like automotive products," he said.

Glaval's own marketing thrust "has been ongoing and constant," Becker added, referring to the company's use of sales incentives of its own to maintain its production momentum and sales to dealers during the recent downturn in demand.

"Had we not done that, we would not have gotten out of the model year with the same volume or speed," Becker said.

He said there was some risk in the company's chassis orders and sales plans for 1990; but, even if demand softens, "the marketplace for conversion vans is not going to drop off the face of the earth."

"Someone out there will hurt, but it's not going to be Glaval," he said. "If you want to play in the big league, you have to say 'where do I want to be?' and then 'how sincere are you about that?' "

Chevrolet continues to be the flagship of Glaval's sales, but its GMC volume has "increased tremendously," Becker said. Ford sales are up, too.

Bivouac on a roll for '90 season

Special sales clear inventory; 50% hike in chassis orders due

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Bivouac Industries of Vandalia, Mich., has increased sales in a soft market and is starting the 1990 model year like gangbusters.

With the help of special sales events, Bivouac cut an inventory of 1,200 to 1,400 chassis to 200 during the past couple of months. It just finished selling the last 200 of its 1989 units.

And it will "probably increase orders for 1990-model GMC, Chevy and Dodge chassis by 50 percent," according to Charles Jackson, Bivouac general manager.

"That may sound ridiculous in this type of market, but we have a lot of things going," Jackson said.

For one, the company is putting together a network of 300 exclusive dealers who handle only its conversion products.

It currently has 82, expects to have 182 a year from now and all 300 within two years.

"These are the kind of guys who stock 30 units, and they turn their inventory four times a year — some of them six and seven times," Jackson said.

Bivouac's sales have been running 10 percent ahead of last year, and, "We show black (profit) figures at the end of each month," Jackson said.

He expects the company's 1989 conversion sales, including vans and other types of trucks, to total 6,000 to 7,000 units.

The company didn't wait for Ford Motor Co. and General Motors to get the sales ball rolling.

In July, Bivouac began a progam under which it guarantees dealers a profit on the units it sold them.

Toward that end, it has been heavily involved in setting up special sales events for dealers at the retail level.

"Dealers love it," said Jackson. "About 30 percent of the market is not buying. We're after the 70 percent who are."

He said Bivouac has retained its ranking as Ford's top conversion pool account. It also picked up its numbers on GMC, Chevrolet and Dodge with whom it also has pool accounts. Its GMC sales have shown the biggest increase.

Part of its success stems from pickups. The company produces a the Stetson line of pickups, tied into hats, perfumes and aftershave lotions, with the company of the same name.

"We took a positive attitude in building a good dealer organization. I couldn't be more optimistic. I just finished building a big home in Elkhart, Ind., so I better be," Jackson said.

Bivouac Industries has been diversifying into different areas in the automotive market. Its Bivouac Automotive division handles van, pickup and other conversion operations. Bivouac Commercial Vehicles produces parcel delivery or cube vans, truck bodies and other specialty vehicles. Bivouac Warranty began within the past year. It provides extended service policies covering the conversion portion of the company's vans.

Mark III Industries' van conversions are geared to active lifestyles.

June vehicle sales slip 6.5% in Canada

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Canada's domestic and imported car and truck sales lost steam in June as the market finished the first half of 1989 slightly weaker than a year go.

Overall vehicle sales for the month were down 6.48 percent, while for the first six months of the year they slid less than 2 percent.

Sales of new domestic cars, which decline in May, showed a sharper drop in June. Total domestic car sales slipped 13.26 percent for the month and 5.77 percent for the first half of the year. Import car sales were up 3.15 percent in June and 5.06 percent for the year.

Among domestic makers, General Motors of Canada's sales fell 21.76 percent. The automaker was followed by Chrysler, which dropped 15.08 percent.

Ford of Canada slipped only 2.24 percent.

Imported cars were up modestly compared with their year-ago levels. They were led by Chrysler Canada with its increasingly popular Mitsubishi imports, which more than tripled in sales.

Mazda's popular Miata sports car helped boost the Japanese maker's sales 90.13 percent over last June.

Overall domestic and imported car sales slid 7.98 percent in June. For the first six months of the year, industry car sales fell 2.53 percent.

Truck sales paralleled the car scene in June, with domestic sales down and imports up. Domestic truck sales fell 7.87 percent, but imported models gained 32.44 percent on the strength of large rises at Mazda, Nissan and GM.

GM's car numbers in June were not totally unexpected. Bill Atkinson, vice president of sales, service and marketing, GM of Canada, said "following the very strong months of April and May, there was some expectation that sales in June would come down somewhat in light of continued high interest rates. . . .

"The month of June was, to some extent, a 'payback' period as sales were drawn forward by the success of our 9.9 percent financing incentive program," Atkinson said.

Ford helped hold car sales in line during June by continuing incentives. They included cash rebates — ranging up to $4,000 on 1988 XR4Ti models — and interest rates as low as 8.9 percent on selected models.

"The direction we target our incentive dollars clearly is having an effect on showroom traffic and sales," said Jack Clissold, vice president of sales and marketing, Ford of Canada.

Tempo and Topaz sales rose 16 percent in June. Thunderbird and Cougar sales advanced 26 percent and 15.1 percent, respectively.

Sale of air-bag group raises Talley earnings

PHOENIX, Ariz. — The $60 million sale of its car air-bag operation to TRW Inc. boosted Talley Industries' second-quarter earnings.

William H. Mallender, Talley chairman, said the company will receive royalties for 12 years based on worldwide air-bag sales by TRW and sales by other U.S. manufacturers.

Talley had net earnings of $18.1 million for the second quarter of this year on revenue of $106 million.Earnings in the second quarter of 1988 were $5.1 million on revenue of $91 million.

Subaru sends students to summer in Japan

CHERRY HILL, N.J. — Several New Jersey high school students are participating in the Subaru Summer in Japan program.

The eight-week program is sponsored by the Subaru of America Foundation and is administered by the Youth for Understanding International Exchange.

Orlando auction sells 4,927 on birthday

Florida Auto Auction of Orlando sold a record 4,927 vehicles at its 17th anniversary sale, up from last year's 4,864, the former peak. Consignments were 7,818 units, up from 7,532 a year ago.

The day's gross sales were $49.6 million with an estimated price per vehicle of $10,050.

Florida Auto Auction of Orlando has 116 acres, 15 auction lanes, 704 employees and 35 auctioneers.

Dealers from 37 states and Puerto Rico attended the sale. Of the 562 consigning dealerships and 891 purchasing dealerships, 257 were registered for the first time.

Employees at the auction's reconditioning center worked 16 consecutive days to prepare for the sale. They reconditioned more than 2,875 vehicles for the auction.

Two new lanes were opened, bringing the number of selling lanes to 15 — more than any other auction in the nation.

Factory sales by Chrysler Motors, General Motors, Mitsubishi, Subaru and Toyota contributed to the sale's success. Chrysler and GM participated in closed sales with 117 Chrysler dealers registered and 283 GM dealers registered.

GM had a 100 percent sales rate, consigning and selling 627 vehicles totaling $6,811,900. Chrysler registered 723 vehicles and sold 484, for a gross sales volume of $4,847,750.

Florida Auto Auction of Orlando is owned by Atlanta-based Manheim Auctions.

AUCTION BRIEFS

CHARLES THOMAS

GE auction bows

GE Capital Auto Auctions opened its $15 million Greater Tampa Bay auction facility in Tampa, Fla., Aug. 9 with prize drawings of more than $35,000 as well as breakfast with drag racer "Big Daddy" Don Garlits.

The eight-lane, 80-acre auction has storage capacity for more than 3,000 vehicles and features automated 24-hour check-in and check-out.

Major accounts of the Greater Tampa Bay Auto Auction are Ford Motor Credit, Ford Motor Co., Budget Rent-A-Car, GE Capital Auto Lease and Volkswagen Credit Corp.

Tampa Bay Auto Auction brings to 18 the number of auctions operated by GE Capital Auto Auctions, based in Barrington, Ill.

Anglo's Bayside debuts

Anglo American Auto Auctions, Nashville, Tenn., has opened its 22nd subsidiary, Bayside Auto Auction in Tampa, Fla.

The new $5 million, 20.5-acre facility will conduct weekly sales with consignments of up to 800 vehicles. Florida is a hot market for auto auctions because of the number of used vehicles flowing from rental car companies.

Audi adds dealer incentives; Subaru picks lease plan

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Audi is offering cash incentives to dealers on selected models and has added its 1990 Coupe Quattro to its leasing program. Also last week Subaru of America announced its lowest-ever lease rates for all 1989 and 1990 models, including the new Legacy.

Under the "Cash in on Audi" program, dealers are eligible to receive up to $5,000 on Audi 100 and 200 models and up to $2,300 on Audi 80 and 90 models.

Dealers can earn $250 for each 100 and 200 model in stock, transit or port-allocated status and $500 for each allocated and delivered from port stock. A $1,800 cash incentive on 80 and 90 models and $3,500 on 100 and 200 models is also being offered.

Dealers who exceed 100 percent of their two-month sales objective will earn up to a $1,000 bonus on each eligible 100 and 200 model sold or leased over that 100 percent and $500 on the 80 and 90 models.

Additionally, Audi salespersons can earn $250 for the retail sale or lease of the same four models plus the 1990 Coupe Quattro, which is included in the "3-Year Test Drive" leasing program.

The Audi dealer incentive program started Aug. 1 and expires Sept. 30. Audi delivered 2,658 cars in July, a 62 percent improvement over last July.

The new Subaru rates will be available through Oct. 3 on lease terms from 24 to 60 months. National and regional ads for the Subaru Special Value Lease Program are expected to begin this week.

Under the program, monthly lease payments for a Legacy would be $238 for 48 months, compared to $304 for a conventional lease, or $391 for retail financing at 10.5 percent for 48 months.

The company had hoped to exempt its Legacy from its extensive incentive programs. The Legacy was introduced in April. Monthly lease payments for the entry-level 1989 Justy DL are $112.

Subaru's July sales increased nearly 17 percent from 11,471 units in July 1988 to 13,364. Year-to-date sales are virtually tied with 1988, at 87,088, compared to 87,195 last year.

Automotive News Staff Reporter Jim Henry contributed to this report.

PN38

FROM PAGE 2

that will replace its current truck models, though not from a common family. The "flexible" chassis that was to be the heart of the PN38 appears to be gone.

The replacement for the current Aerostar, for example, was expected to be the first PN38 product. In subsequent years that same chassis — which could vary in width and length — was to have carried replacements for the F-Series, Ranger, Bronco and other models.

Now, sources say, the Aerostar replacement won't get a new platform when it is revised in 1993. But it will be completely overhauled in around 1996 and sit on the DFC55 platform that's expected to carry the next-generation Taurus.

One source said Ford still plans to use many common components but not to the degree originally planned. Another said some features of the PN38 concept, such as modular parts systems, would be incorporated into new truck programs.

Benton said the changes in the program were prompted by workload considerations as well as costs.

Benton said changes in the PN38 product line may allow Ford to use an existing powertrain with some revisions. The original PN38 included new engines from Ford's upcoming modular engine program.

Benton denied that the changes in the PN38 strategy represented a reluctance to take the kinds of product risks that led to the automaker's turnaround in the early 1980s.

"We are going to have hopefully very imaginative, far-reaching new truck/car kinds of products, regardless of what we call them," Benton said.

Benton was participating in the University of Michigan's Management Briefing Seminars at Traverse City, Mich., last week.

Automotive News Staff Reporters Laura Clark and Dutch Mandel contributed to this report.

Chrysler Fund donates to reading program

HIGHLAND PARK, Mich. — The Chrysler Corp. Fund has announced a $2.1 million grant to Reading Is Fundamental to establish a Running Start program.

The program encourages students in 10 cities to read or listen to the reading of 21 books. It also provides free books and resources for classrooms and programs to encourage parental participation.

The grant is the fund's largest ever for a single project and is its first major gift to early childhood learning.

MAZDA

FROM PAGE 3

account how a car makes you feel," she said.

Influencing Mazda's campaign is new research that finds people's buying decisions are more emotional than rational, she added.

Mazda decided on the new tack after it determined that a price-value position would not be profitable in the 1990s for a Japanese manufacturer, said George McCabe, deputy general manager and group vice president for sales and marketing.

"Mazda is a very different player than it was in the 1970s and early 1980s," he said. "We staked our reputation on being a low price-high value Japanese marketer."

But the appreciation of the yen against the dollar since 1985 shifted the production cost advantage to domestic manufacturers. And the arrival of other low-cost imports from Korea forced Mazda to change its strategy, McCabe said. The company has moved from "a price marketer to a premium quality marketer," he added.

About Sept. 1, the "It just feels right" corporate campaign will broaden into 1990 product advertising, Thompson said.

Five all-new 30-second television spots will pick up individual Mazda products — MPV, 626, 929S, MX-6 and a 323 Protege sedan that will be introduced this fall. All expand upon the "feels right" theme, as do two Miata spots that are carried over from its July 1 introduction.

The 1990-model-year media purchases will increase Mazda's frequency and reach in broadcast and print.

Instead of high frequency on one cable and six network television shows, Mazda will be on six cable and 40 network shows this fall, Thompson said. Instead of six magazines in 1988 and 20 in 1989, Mazda will advertise in 50 magazines for 1990.

The media buy is 75 percent network and spot television, 20 percent print and 5 percent other media.

Mazda's media buying budget for the 1989 calendar year is $140 million, up 36 percent from $103 million in 1988.

LEXUS

FROM PAGE 2

"But we've been in business (with other dealerships) for 42 years and we don't do business that way," Whitaker said. "Why sell a customer one car when you can keep him coming back?"

Lexus, the luxury division of Toyota Motor Sales, has pushed hard to ensure dealers don't sell LS400 and ES250 models above sticker, arguing that doing so would tarnish Lexus' image in the long run.

"I have personally discussed the startup with each of our 70 dealers that will be open by Sept. 1," said J. Davis Illingworth, vice president and general manager of Lexus.

"I have not specifically asked them not to add a pack, but believe me, they each know how I feel about it," Illingworth said.

So far, Lexus executives know of no dealer who is receiving August shipments of cars that is selling above suggested retail prices, a spokesman said.

Prices start at $21,050 for the ES250 sports sedan and $35,000 for the LS400.

"We'll find out for sure when we start calling each of our first 5,000 buyers, but I don't expect to see it," the spokesman said.

Stocks fall to 65 days on Aug. 1

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

In spite of lackluster new-car deliveries in July, U.S. and foreign automakers began August with a practically ideal 65-day supply.

Combined car stocks fell nearly 300,000 units during July and totaled 2,211,380 on July 1. A month earlier, the total was 2,510,701, a 73-day supply.

U.S. automakers began August with the lowest days' supply of the year because production was reduced by plant closings for vacations and model changeover. The inventory was 1,565,308 unsold domestic cars, equal to a 65-day supply. Domestic stocks were 15.26 percent lighter than on July 1 when there was a 75-day supply.

Import-car stocks shrank 2.61 percent to 646,072 on Aug. 1. The 67-day supply remained the same as on July 1.

Each of the Big 3 reported lower inventories and days' supplies of captive and U.S.-built cars on Aug. 1 than on July 1.

Ford Motor Co. reduced its car stocks 13.87 percent during July. The Aug. 1 total was 485,000.

General Motors cut its million-car inventory to 856,268 on Aug. 1. Stocks dropped 14.49 percent.

Combined stocks for Chrysler Motors dropped 12.57 percent, to 262,592, during July.

Honda began July with a 49-day supply. By Aug. 1, Honda had shaved its combined stocks 16.36 percent to 26 days or 63,761 units.

Toyota and Mitsubishi reported fatter inventories on Aug. 1. Toyota began the month with 91,083 unsold cars, up 22.05 percent. Mitsubishi's stock of 11,568 cars was 3.66 percent.

On the other hand, Nissan reduced its car stocks 4.87 percent to 144,739 during July.

The New Generation of OLDSMOBILE

Olds jumps the gun on Cutlass

Usually it's automotive enthusiast magazines that break release dates for new-product photos and information, amid complaints from automakers. This time, Oldsmobile fractured its own embargo dates of Sept. 7 or October issues with this ad running in September issues of buff books available now. The ad highlights the 1990 Cutlass Supreme sedan.

AUCTIONS

FROM PAGE 3

up from 109,000 in 1988. Chrysler declined to say how many factory cars will go through the auctions this year. But in 1988, the estimate was 130,000, up from 80,000 the previous year.

Following the lead of domestic automakers, many of the importers have similar buyback arrangements with daily rental car companies.

Mitsubishi, for example, started the year with 5,000 program cars and the number has grown to 20,000, according to Zafirovski.

Automakers like the fleet programs because they expose large numbers of people to their cars and provide a way to smooth out the peaks and valleys of retail orders at plants.

Ford Motor Co. has taken the buyback program a step farther by offering it to its corporate customers. Hewlett-Packard Corp. was one of the first companies to enter into a buyback arrangement with Ford for disposal of its fleet vehicles.

Average rotation for a program vehicle in a daily rental fleet is eight months, but Zafiovski said it could go as low as 6½ months. Program vehicles are expected to continue for the foreseeable future, say industry executives.

Although the industry fails to produce statistics, estimates by leading officials peg 1989 auction sales as high as 6 million vehicles on consignments of about 8 million cars and trucks.

The Big 3 auction chains will account for about 40 percent of those sales with independent auctions picking up the remainder.

At GE, based in Barrington, Ill., Zafirovski expects sales of 760,000 vehicles, up 7 percent over last year, at its 18 locations on registrations of 1.3 million vehicles.

For Atlanta-based Manheim Auctions — with 24 locations — sales in 1989 are expected to top 825,000 vehicles on consignments of 1.5 million cars and trucks, an increase of 8 percent from a year ago.

And Nashville-based Anglo American Auto Auctions estimates it will close the year selling 780,000 vehicles — up 12 percent over 1987 — on registrations of 1.2 million cars and trucks at its 23 auctions.

Program cars, which are sold at special auctions limited to an automakers' dealers, still top other types of vehicle auctions with a sales rate of 95 percent or more.

"Ford and General Motors sales have almost a 100 percent sales rate with Chrysler slightly lower," said Zafirovski.

Sales rates are 75 percent for fleet and lease vehicles and are about 50 percent for vehicles brought to the auction by dealers, he said.

Program cars have led the surge in the number of institutional vehicles flowing to the auctions. The gavel is expected to fall on approximately 760,000 factory vehicles in 1989.

In 1980, vehicles brought to the auction were 75 percent dealer and 25 percent institutional vehicles — meaning manufacturer, fleet, lease and others — but that has changed.

According to Zafirovski, by 1985 institutional vehicles had inched up to 30 percent of the vehicles going to auctions and dealer-owned vehicles had fallen to 70 percent.

"Most of the growth in institutional vehicles has occurred since 1985," said Zafirovski. "By 1992, we're looking at 40-45 percent dealer and 55-60 percent institutional vehicles at the auctions."

The auctions expect the next growth area to be vehicles from captive finance companies, particularly the importers whose retail lease portfolios are maturing.

Michael J. Richardson, president and chief executive of Anglo American Auto Auctions, said dealer-consignment vehicles have grown 4 percent while fleet and lease vehicles have climbed 29 percent and manufacturer vehicles 38 percent since the beginning of the decade.

New-car dealers have also been attending auctions in greater numbers, persuaded by the manufacturers to purchase program vehicles.

"Our statistics show that 80 percent of all new-car dealers from the domestic manufacturers have attended one auction in the last 24 months," said Zafirovski. "More realistically, roughly 50 percent of the new-car dealers attend factory sales regularly or several times a quarter."

Air-bagged Fords to use Izumi steering wheels

YAPHANK, N.Y. — Izumi Corp. has been awarded a three-year contract by Ford Motor Co. to manufacture steering wheels for cars equipped with air bags.

Beginning with the 1990 model year, Ford Mustang, Ford Crown Victoria and Mercury Grand Marquis will have air bags.

Approximate volume for the three models is 300,000 annually.

TRW and Morton Thickol will supply the air-bag modules.

Izumi Corp. is the U.S. subsidiary of Izumi Motor, Japan.

BMW

FROM PAGE 2

management board and at BMW of North America, which required him to "commute" about every two weeks between New Jersey and Munich for the last three years.

"This company (BMW of North America) deserves a full-time presence. This was always considered a temporary arrangement. Nobody can really do this (commute) twice a month," he said.

Kramer acknowledged that BMW's U.S. sales have declined, but worldwide sales were up 11 percent last year to about 495,000 units, and the company is on a pace to sell more than 500,000 this year.

BMW of North America's sales declined 16 percent in 1988 to 73,359. Sales this year were 39,867 through July, down 2 percent from last year. July sales were down 15 percent at 5,018.

Gerlinger joined BMW AG in 1963 and has served in a variety of sales and operations positions including department manager for the parts division, manager of export sales for the North American market and manager of worldwide distribution of automobiles.

July output lowest since early 1982

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Darkened by model changeover downtime and idled plants due to lagging sales, July's domestic car output was the lowest for any month in 7½ years, and truck output was the lowest of any month since December 1984.

Automakers built 280,093 cars in July, the lowest output for any month since January 1982 when 266,858 units were assembled.

July's build was 54.30 percent below June's production of 612,914 and 24.05 percent lower than the year-ago month's 368,783.

Weekly output is rising. Last week's scheduled build was 108,204, 27.30 percent above the prior week's 84,998 and 10.69 percent more than the year-ago week's 97,758.

Last week's scheduled production was split as follows: General Motors, 36.45 percent; Ford Motor Co., 27.36 percent; Chrysler Motors, 13.49 percent; Honda of America Manufacturing, 6.94 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.98 percent; New United Motor Manufacturing Inc., 3.70 percent; Toyota Motor Manufacturing U.S.A., 3.43 percent; Diamond-Star Motors, 2.38 percent; and Nissan Motor Manufacturing Corp. U.S.A., 2.27 percent.

July's truck output of 224,787 was the lowest of any month since December 1984 when 211,229 units were produced.

Last month's truck build was 40.96 percent below the June assembly of 380,749 and 6.35 percent lower than the year-ago month's 240,019.

Truckmakers targeted 78,098 units to be built last week, 4.71 percent above the prior week's 74,584 and 10.80 percent more than the year-ago week's 70,487.

GM's Reatta Craft Centre in Lansing, Mich., and most lines at its Detroit-Hamtramck plant reopened today. The Toronado line is slated to resume output Aug. 16. The plant was closed for model changeover.

Ford's Lincoln Mark VII line at the Wixom, Mich., plant remains idle until Aug. 28 for changeover.

July build trails June in Canada

Canadian auto output totaled 51,309 units for July, 44.02 percent below the June build of 91,654 but 42.81 percent over the year-ago month's 35,928.

Last week's estimated assembly of 11,451 cars dipped 9.08 percent from the previous week's 12,594 and declined 5.69 percent from the year-ago week's 12,142.

July's truck output of 38,187 was 57.11 percent lower than June's 89,026 but was 10.19 percent more than the year-ago month's 34,656.

Truck production of 11,256 units last week was 25.86 percent above the prior week's 8,943 but 32.68 percent below the year-ago week's 16,719.

Output resumed today at General Motors' three Oshawa, Ontario, plants and its Scarborough, Ontario, facility.

GM, Chrysler in China for auto show

By Stephen Vines
STAFF CORRESPONDENT

HONG KONG — Less than three months after China's government violently put down student demonstrations in Beijing, it is business as usual as the U.S. government and automakers prepare to take part in the country's annual auto show, which begins Thursday.

The show, originally scheduled for July, was postponed after the June 3 violence that prompted many foreign auto executives to flee the country. Now many have returned and the show, renamed Auto Shanghai '89 from the original Automotive China '89, will go on with trade fair certification from the U.S. Department of Commerce. The Shanghai show will also be visited by the new American ambassador to China, James Lilley, the U.S. Embassy in Beijing confirmed.

Show organizers say there will be a United States pavilion at the show. Embassy officials deny any knowledge of a special area for U.S. automakers, but two of the Big 3 said they will attend.

"Yes, we will have a display there, as we have had for the past four years," said John Pekarek, a General Motors spokesman in Detroit. "We were committed to doing the show in April and we decided to carry it through. We will likely have a small display, as we've had in the past — only two or three vehicles."

As to whether or not GM, which shipped engine tooling to China last year, would continue its participation in Chinese activities, Pekarek said, "On any new business venture or any new project in China, we're taking a very cautious wait-and-see approach. It's a very unusual situation. I've read lots of reports of companies going back in and we're very cautious."

AUTOMOTIVE NEWS/JOE WILSSENS, CHARLOTTE WINTER

Porsche 944 S2 cabriolet is among the 1990s that could help convertibles capture 2 percent of the market.

CONVERTIBLES: *New buyers expand a niche; more '90 models drop the top*

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

The American ragtop revival, which started in 1982, began surging last year. And several key launches for 1990 will expand the niche.

Sales of ragtops are up 11 percent during this otherwise down sales year.

And there are important launches coming up. During the 1990 model year, General Motors will bring out the Buick Reatta convertible, plus droptop versions of the Cutlass Supreme and Chevrolet Beretta. Chrysler will add a Dodge Shadow convertible in 1991.

The low volume but high-profile new Mercedes-Benz SL will be introduced in the United States in January. The new Lotus Elan will debut next spring and Nissan's Infiniti line will include an M30 convertible next spring.

"The convertibles are becoming a 12-month sale," says Marvin DeLuca of DeLuca Chrysler-Plymouth in Cleveland. "There is not as much in the fall and winter, but we peck away at it all year round."

The open-top share of new-car sales has tripled since 1982 when Chrysler's LeBaron convertible ended five years without domestically produced convertibles.

"The big difference between now and then was that convertibles were available in almost every single segment."

GM prices try to spur top sellers

By John K. Teahen Jr.
AUTOMOTIVE NEWS STAFF REPORTER

General Motors priced its 1990 cars like a company that suddenly realized it has been missing the boat all these years.

The company's new prices appear more competitive in the high-volume and hotly contested compact and intermediate segments. GM cut prices or posted moderate increases on many of those autos — and they aren't stripped models.

The marketing and promotional potential is great, but whether it can be translated into increased sales will be determined as the model year proceeds.

An obstacle for GM is the elimination of the price break on options grouped in packages. Some divisions took that step last spring. Ordering the options as standalone items boosts the price to the buyer and the dealer.

But one advantage for buyers undoubtedly will remain. Barring a long-lasting avalanche of sales, there is no hint that the steady round of cash and finance incentives will end.

GM announced a 1990 price increase averaging 2.5 percent on comparably equipped cars plus 0.9 percent for installing passive restraints on all models. Automotive News estimated the hike at $525.

But not a single car in the GM fleet went up $525. Twelve were reduced as much as $500; 90 went up as much as $2,981 (the super-hot Pontiac Firebird Trans Am GTA); and 20 models had no 1989 counterpart.

Eight of the cuts were on Chevrolets, notably the best-selling Corsica and Beretta. Two Corsica four-doors dipped $480 and $490; Beretta two-doors went down $185 and $255.

Chevy alters strategy in bid to make Geo fly

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Chevrolet is completely overhauling the marketing strategy for its year-old Geo line of imports, putting new emphasis on the individual models, a new national advertising campaign and a shift in responsibility between its two advertising agencies.

The Geo concept was designed to bring young import intenders into Chevrolet showrooms and boost Chevrolet's sagging market share in the small vehicle segment. But the brand has not generated the kind of sales spark envisioned by Chevrolet: an estimated 200,000 Geos will be sold by the end of the 1989 model year compared to a projected 220,000 despite generous incentive programs.

Revamping Geo marketing has also been a top priority of Jim Perkins, the former Toyota executive who returned to GM to become Chevy's general manager May 1.

Erdman

Chevrolet is backing down from its strategy of promoting the Geo brand over the individual cars nationally. Dealers had complained that consumers were confused that Geo was a model instead of a line of vehicles. Some consumers were even asking "What is a Geo?"

"The upbeat kind of advertising was different, but it didn't go far enough in establishing a name for Geo or positioning it in the marketplace," said Rick Smith, owner of Key Chevrolet in Muncie, Ind.

Michael Erdman, Chevrolet general marketing manager, said confusion over Geo stemmed from a staggered launch of Geo vehicles around the nation and a renaming of products midway through the model year. For instance, the Chevrolet Nova vehicle was renamed the Geo Prizm.

Chevrolet will step up its national advertising with both a brand campaign and advertising for individual models. A heavy emphasis will be placed on Geo's fourth car, the Storm, which arrives this fall.

Chevrolet will put in additional advertising dollars for Geo, Erdman said. Factory regional ads and dealer association ads will continue to promote individual models.

Chevrolet will also discontinue its cartoonish "No matter what" advertising campaign. The "No matter what" campaign promoted the Geo brand nationally showing

Dodge promises more theme cars

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

AUTOMOTIVE NEWS/JOE WILSSENS

Damoose told dealers Dodge will strengthen its performance image.

HIGHLAND PARK, Mich. — Dodge will tell an estimated 3,000 dealers meeting in Nevada this week that it plans an array of future products to back up the brand's performance image.

John Damoose, vice president of Dodge, said in an interview that Chrysler could not spend heavily for "performance hardware" during its brush with bankruptcy earlier in the decade. Consequently, Dodge's product lineup did not always reflect the performance image being marketed.

"In the last four or five years, despite spending $3 billion in incentives and marketing for this division alone, we really haven't moved our image one iota in the marketplace," Damoose said. "That, to me, is our big target in the future.

"There are reasons why we didn't do it. One of them is because you can't move your image if you don't have the products to support that image. You can't do it in a phony way,"he said.

"A very important distinction between the Chrysler of the early '80s and the Chrysler of the early '90s is that we are finally beginning to build some brands that are supported by products that support a brand image," Damoose said. "It's something that is vital to us staying a factor in the marketplace.

"We have to build a distinct, clear image in the marketplace. We've got to build on our heritage and make this a performance-oriented division and concentrate on expressive, innovative vehicles," he said.

Damoose said he will convey that message to dealers attending a 1990 model preview in Reno, Nev., Wednesday.

Damoose outlined the future product strategy which will bolster the brand image.

- A 16-valve version of the Dodge Spirit sedan will bow in the 1991 model year using a new multi-valve version of Chrysler's 2.2-liter four-cylinder engine.
- The 1991 four-place Dodge Stealth sports car based on the Plymouth Laser/Eagle Talon platform will be offered in four versions. Damoose said Dodge expects in 1991 to sell 30,000 units of the Stealth which will become the lead image model for the division.
- A 5.2-liter V-8 version of the Dodge Dakota mid-sized pickup will be introduced in the 1991 model year. The Dakota also will receive a front-end freshening in the 1991 model year, Damoose said.
- He also said a 1991 facelift of the full-sized Dodge pickup, including front and rear treatment and new side moldings, is scheduled.
- Dodge will retain exclusively the Shadow convertible, bowing in 1990. A companion Plymouth Sundance model had been planned.
- Differentiation of the Dodge Monaco sedan from its sister model the Eagle Premier is planned in the 1991 model year. Damoose said that Dodge expects to sell "50,000 plus" Monaco units in the 1990 model year, Damoose said.
- Dodge and Eagle will market first the 1993-model sedan based on Chrysler's new mid-sized LH platform. Chrysler and Plymouth will launch later 1993 models from the platform which is the company's first since the 1980 K-platform.
- Dodge will market various performance-oriented technology before the other divisions. Damoose said the company is working on multi-valve and turbo versions of its new 3.3-liter V-6 engine and additional applications of anti-lock braking systems and driver-activated suspensions.

Chrysler previously said it will restyle the Dodge Caravan and Grand Caravan minivans in the 1991 model year, launch the sport-utility code-named ZD in the 1992 calendar year and introduce a new full-sized Dodge pickup by the mid-1990s.

In addition, Damoose said possible production of the Dodge Viper sports car "is a lot more concrete than it was a few months ago."

"The whole issue is engineering feasibility now," Damoose said. "As the Viper team moves further along, we're finding out that it's becoming more feasible all the time. We're putting that in our side of the column as a counter at this particular time."

A final decision on Viper production will be made in the first quarter of 1990, Damoose said.

If built, the Viper could be offered in two versions.

"There'll probably be a 360 V-8 and a V-10," Damoose said. "That's probably the best way to do that vehicle."

He described the V-10 engine program, which is primarily being developed for truck applications, "as very much alive."

Damoose said now that Dodge has its product strategy in place, the difficulty is getting that message out in a crowded marketplace.

"You have to cut through the clutter and yet make that technology statement," Damoose said. "That's a difficult kind of balance to do."

Damoose said in the 1990 model

New models strong, but imports dip

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — As import sales continue to decline, led mainly by lagging European luxury makes, new 1989 and early 1990 models introduced in the spring are the segment's bright spots.

Overall, import sales fell 6 percent in July compared to the same period a year ago, while year-to-date sales were down 8 percent to just over 1.65 million.

European imports led the decline. At 302,581, they were 12 percent below the first seven months of last year. They were down 11 percent for July.

BMW's flagship 7 series had a disappointing July, down 44 percent to 752 units, compared to 1,338 sold in July 1988.

Overall, BMW sales are down only about 2 percent for the year, but July sales fell 15 percent. The downturn comes at a critical juncture for BMW as Toyota's luxury Lexus line bowed in August.

But Audi's U.S. sales increased 61 percent in July compared to last year, although seven-month sales were down 11 percent.

About 62 percent of Audi's monthly sales were 100 and 200 models and the new 1990 V-8 Quattro flagship.

Japanese imports dipped 4 percent to 1.16 million for the first seven months. Increased transplant volume was a major factor.

New models like Mazda Miata, Acura Integra and Subaru Legacy

Ford test driver dies in Cougar crash at proving ground

ROMEO, Mich. — A Ford Motor Co. durability driver was killed Aug. 16 when the 1989 Cougar he was testing rolled over at the automaker's Michigan Proving Grounds here. Ford identified the driver as Loyd W. Story, 38, a UAW member and a 14-year employee of the proving ground.

A Ford spokeswoman said Story was conducting a "routine durability test" on the Cougar when the accident occurred. The Michigan State Police are investigating.

The incident was the third fatality at a Ford site this year; two workers employed by a maintenance contractor died in an explosion in an underground utility tunnel at Ford's Rouge complex in Dearborn, Mich., in late April. The last employee fatality at Ford's Romeo Proving Grounds occurred in 1964.

Peugeot enlists Steed to challenge NHTSA crash test

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Peugeot Motors of America has enlisted former NHTSA administrator Diane Steed to challenge the agency's 35 mph crash test program after its 505S model posted poor results.

Steed said the controversial new-car assessment program, which crashes cars into a fixed barrier at 5 mph higher than the federally mandated limit of 30 mph, is "not an exact science."

But Steed said she continued the program during her tenure in the Reagan administration for fear that consumer groups would fight a decision to ax the tests.

"It would not have been realistic to try," said Steed, who added the test was "put on the books" by former NHTSA administrator Joan Claybrook, a follower of consumer advocate Ralph Nader, and "we couldn't get rid of it."

The program crashes selected cars into the barrier at a speed that generates a third more force than crashes at 30 mph. The results for head injury criterion and chest deceleration in the higher speed crashes are compared to levels considered fatal — 1,000 for head injuries and 60 G's for chest deceleration — in the lower speed crashes.

Peugeot's 505S, equipped with passive belts, had a head injury score of 1,983 for the driver and 2,192 for the passenger, and respective chest deceleration of 64 and 77 G's, the worst numbers this year for a compact car.

By comparison, Toyota's compact Cressida scored respective driver and passenger head injury numbers of 790 and 544 and driver/passenger chest G's of 51.

"The frontal crashes into a brick wall do not replicate what happens in most accidents." Steed said. "Therefore, this data should not be used as a sole indicator of a car's crashworthiness."

NHTSA calls the test experimental because the car scores should be compared only among similar models, said Jeffrey Miller, acting NHTSA administrator.

Steed and other automotive experts were lined up for Peugeot, without pay, by a consultant, Ron DeFore, a former NHTSA director of public affairs.

NHTSA 1989 NEW- CAR CRASH ASSESSMENT

Vehicle	Head injury criterion		Chest deceleration (G's)	
	Driver	Passenger	Driver	Passenger
SUBCOMPACT CARS:				
Audi 80 4-dr. sedan	600	515	49	39
Toyota Corolla 4-dr. sedan	994	546	49	45
Volkswagen Fox 2-dr. sedan	787	818	64	58
COMPACT CARS:				
Hyundai Sonata 4-dr. sedan	1,196	937	54	53
Peugeot 505S 4-dr. sedan	1,983	2,192	64	77
Toyota Cressida 4-dr. sedan	790	544	51	51
TRUCKS, VANS, MPVs:				
Isuzu Trooper II 4x4	1,269	1,520	73	59
Suzuki Sidekick MPV	1,345	1,763	64	70
Toyota pickup	1,520	883	47	46
Toyota van	1,183	530	59	54

Other experts willing to speak on Peugeot's behalf include Thomas Hanna, president of the Motor Vehicle Manufacturers Association; George Nield, president of the Automobile Importers of America; and Barbara Keating, president of California-based Consumer Alert.

A Peugeot spokeswoman said, "There is an awful lot of confusion or misinterpretation and we thought it was time people should speak out."

Meanwhile, the latest round of tests included four light trucks.

Isuzu's Trooper II posted respective driver and passenger head injury numbers of 1,269 and 1,520 and chest deceleration of 73 and 59 G's. Suzuki's Sidekick had head injury numbers of 1,354 driver/1,763 passenger and respective chest deceleration figures of 64 and 70 G's. Toyota's pickup posted numbers of 1,520 driver/883 passenger and chest results of 47 and 49 G's. The Toyota Van fared best among light trucks with head injury numbers of 1,183 driver/530 passenger and chest G's of 59 and 49.

Subaru hopes to cut financial drain of incentives

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

CHERRY HILL, N.J. — Subaru of America hopes to wean itself from heavy rebates, but the company will continue to offer incentives while it renews its product lines.

"We would all like to get off the dope," said Thomas R. Gibson, president and chief operating officer of Subaru of America. "It's a very expensive way to market cars.

"In our ease, we'll continue to use incentives, but we'll be cutting back the amounts. We've got new products, and more competitive products. We'll have programs, but nowhere near the degree we've had for the past year and a half," Gibson said last week in an interview.

Incentives run from $1,000 on some Justy minicars to $3,000 on the XT sport model. Subaru reportedly spent about $97 million on incentives in 1987 and 1988.

For the first half of this fiscal year, the company posted a net loss of $39.3 million. Sales through July are about even with last year's.

Subaru of America, based in Cherry Hill, N.J., is the publicly traded U.S. importer and distributor of cars made by Fuji Heavy Industries in Japan.

With a new lineup led by the Legacy, Subaru's first intermediate-class model, the company hopes to be able to cut incentives, but sales of the Legacy have been slower than expected, Gibson said.

"We would all like to get off the dope (incentives)."
— THOMAS GIBSON

"The dealers and the press all like the car, but it's a new segment for us, and new buyers for us, and that person is taking longer to make a decision than we thought," he said.

This fall, the company will also introduce a four-door version of the Justy. Also due is a four-wheel-drive version of the Justy with a belt-driven electronic continuously variable transmission. The only Justy with an ECVT currently comes in a front-drive model.

Subaru will also add anti-lock brakes as an option on the Legacy L this fall. The brakes are already an option on the top-of-the-line Legacy LS.

Last spring, Subaru began rebadging its high-volume line of sedans, wagons and three-door coupes as the Loyale, limiting the range of options and trim levels available.

A new XT sport model is expected in 1990 or 1991, and the Loyale line is due to be renewed around 1992.

Subaru's first domestic production is expected to begin in the next couple of weeks at Subaru-Isuzu Automotive in Lafayette, Ind., a joint venture that will make the Legacy and Isuzu pickups.

Gibson said domestic production will cushion Subaru from dollar-yen fluctuations that drove up prices after 1985, but the new plant won't prompt any immediate improvement in Subaru's profits.

Meanwhile, the Legacy is supposed to signal the beginning of the end of Subaru's heavy incentives. The Legacy first went on sale in April, the only Subaru without incentives.

The company recently started a low-cost leasing program that included the Legacy, but Gibson said the program had been planned in advance and was not a response to slow sales. The lease program was initially designed solely for the Legacy, but the company decided to include all its models as a further means of trying to reduce old stocks, he said.

Gibson said Subaru hopes to sell 60,000 to 80,000 Legacy models for the full 1990 calendar year — about half of expected total annual sales of 150,000 to 160,000 units.

Subaru's sales for the first seven months of 1989 at 87,088 were virtually even with 1988. Sales for July were 13,364, including 3,714 Legacy models, or about 28 percent of the monthly total.

Legacy is "doing well — not as well as I'd like, but the introduction came just as the market got soft, and we had too much inventory around," Gibson said. Inventory "is starting to come down, and September will be the first real shot for the dealers to promote Legacy."

He said dealer advertising until now has been featuring clearance sales of old models.

A few surprises have emerged in the Legacy line after the first few selling months, Gibson said.

GM, Ford reduce forecasts for 3rd-quarter car output

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers scaled back their combined third-quarter auto production forecast again — this time by almost 41,300 units.

Bulging inventories of unsold cars caused most makers to cut their forecasts, as industry analysts had predicted.

General Motors, Ford Motor Co. and three of the six Japanese transplants trimmed their schedules. The Big 2 slashed 36,300 units from their forecasts; transplant companies cut about 5,000 units from their schedules (Automotive News, July 17).

The industry expects to produce 1,430,100 cars during the third quarter, down 2.47 percent from the 1,466,341 forecasted earlier.

The biggest cut came from the No. 1 automaker; GM's earlier schedule of 623,000 cars was sliced to 600,000 units.

GM's third quarter forecast is 17.79 percent below the 729,853 cars built in the year-ago period.

Ford cut back almost 13,500 cars from its last schedule. But its forecast of 362,669 cars is 0.69 percent above 1988's actual build of 360,189.

Chrysler Motors was one of two makers to increase its third-quarter schedule. The company boosted its previous forecast 5,000 units to 186,000 cars, 4.23 percent below the 1988 actual total of 194,220.

The other automaker increasing its third-quarter projection was Toyota Motor Manufacturing U.S.A., up 10,000 units to a schedule of 45,000 cars. Late last year, the company began building the Camry in Georgetown, Ky. Domestic Camry sales have been increasing monthly.

Honda of America Manufacturing shaved 410 units from its third quarter schedule. Honda projects output of 82,590, down 6.84 percent from the actual 1988 third-quarter build of 88,656.

New United Motor Manufacturing Inc. expects to assemble 47,000 units in the three-month period, down 13,000 units from its last schedule. The total is 60.19 percent above the 29,340 built in the year-ago period when NUMMI was retooling for the 1989 Geo Prizm.

Nissan Motor Manufacturing Corp. U.S.A. scaled back 1,500 cars from its previous third quarter schedule. The new forecast is 29,500 units, down 4.52 percent from the 30,897 built in the third quarter of 1988.

Third-quarter projections for the remaining U.S. automakers are unchanged. They are: Mazda Motor Manufacturing (U.S.A.) Corp.: 47,341; Diamond-Star Motors, 30,000.

U.S. THIRD QUARTER CAR PRODUCTION SCHEDULE

	Projected 1989	Actual 1988
General Motors	600,000	729,853
Ford	302,669	360,189
Chrysler	186,000	194,200
Total Big 3	1,148,669	1,284,242
Honda	82,590	88,656
Mazda	47,341	54,083
NUMMI	47,000	29,340
Toyota	45,000	0
Diamond-Star	30,000	0
Nissan	29,500	30,897
VW	0	3,512
Total transplants and joint ventures	281,431	206,488
Total	1,430,100	1,490,730

Court OKs long warranty in New York's lemon law

By Helen Kahn
SENIOR CORRESPONDENT

A federal judge in New York upheld a state lemon law requirement that manufacturers provide two-year/18,000-mile warranties.

But U.S. District Court Judge Leonard B. Sand did throw out a minor part of the state lemon law requiring dealers outside the state to notify the manufacturer of defect complaints by New York car owners.

It was the last of constitutional challenges to the law brought by the Motor Vehicle Manufacturers Association and the Automobile Importers of America in federal court. In May 1988, Sand, upholding the First Amendment rights of the manufacturers, threw out a section of the law that banned auto companies listing a window sticker charge to cover costs for complying with the state lemon law. Last December, he also ruled that the manufacturers' arbitration programs do not have to meet additional state requirements because they comply with the federal Magnuson-Moss warranty law.

Still pending before a state court in Albany is the auto industry's challenge to a section of the law that bars makers from seeking judicial review of decisions by New York's state-run arbitration program. A similar challenge in Connecticut resulted in that part of the state lemon law being declared unconstitutional, effectively ending the state-run arbitration.

In upholding the state's extended warranty coverage, Sand said New York acted to address the problems of defects that appear shortly after expiration of the warranty. Moreover, said Sand, most automakers are not affected since the 12/12 warranty is no longer standard.

He also disagreed with the automakers' claim that because of New York's requirements they might have to raise prices nationally. Instead, he felt they would likely do "what logic dictates and continue to pass along the added costs to the consumers who benefit from the statute, namely those who purchase and register their cars in New York." He noted that manufacturers can charge more in New York as Ford Motor Co. does with its $115 "mandatory New York repair coverage" and General Motors with its $65 for "New York warranty enhancements." In fact, he finds "no need for nationwide uniformity in this area."

But, says Sand, a "minor" requirement in the disputed section of the state lemon law, that out-of-state agents or dealers must forward written notices of reported problems to a manufacturer within seven days, is unconstitutional.

Mercedes dealers buy Crabtree chain

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — The owners of a Connecticut Mercedes-Benz dealership have bought Crabtree Automotive group, a suburban New York chain that last year paid the state to settle charges of false advertising and deceptive sales practices.

The principals at Imported Cars of Greenwich have formed TriStar Automotive Group to buy the Crabtree chain. Crabtree Automotive sold 11 brands in eight outlets in New Rochelle and Larchmont, N.Y.

Crabtree officials could not be reached for comment on the sale.

A year ago, Crabtree Automotive agreed to a settlement that the New York state attorney general's office said was the largest of its kind in the nation.

It said the settlement was worth up to $2.8 million, counting refunds that customers could demand.

But the immediate cost to Crabtree Automotive was limited to $150,000 to reimburse the attorney general's office for the cost of its investigation. Under the agreement, Crabtree Automotive denied any wrongdoing.

Charles H. Wilk, president of TriStar Automotive Group, said Crabtree Automotive has paid its $150,000 fine and the former owners would be responsible for damages from claims made before Aug. 17.

"High-pressure sales and service tactics will have no place in TriStar dealerships," Wilk said in a statement. "The new management will not rest until every customer leaves our dealerships satisfied."

In addition to Wilk, TriStar's principals are Arthur K. Watson Jr., chairman; and Stuart H. Watson, vice chairman. Arthur Watson and Wilk are also chairman and president, respectively, of Imported Cars of Greenwich, one of the largest Mercedes-Benz dealerships in New England.

With the Crabtree acquisition, TriStar will sell Ford, Mazda, Nissan, Sterling, Hyundai, Toyota, Suzuki, Cadillac, Jeep-Eagle and Mitsubishi. The company expects annual sales to total $150 million.

Crabtree-Haas Toyota in Westport, Conn., was not involved in the deal or last year's settlement.

Diamond-Star vote is Thursday

NORMAL, Ill. — Workers at Diamond-Star Motors will vote Thursday on a proposed labor contract reached last week between the transplant and the UAW.

The agreement follows five months of contract negotiation between the union and management at Diamond-Star, a 50-50 joint venture between Mitsubishi Motors Corp. and Chrysler Motors.

Both sides have declined to discuss details of the contract prior to the ratification vote. But the agreement is expected to recognize many of the plant's existing work rules, which are based on only two job classifications — production associates and skilled maintenance associates.

The company recognized the UAW in December 1988 without a union election after about 600 of the 872 production workers then at the plant signed cards calling for a union election. Diamond-Star now employs 2,300 production and maintenance workers.

Suppliers say U.S. car fleet can get 41 mpg in 10 years

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

U.S. auto suppliers believe domestic cars could meet fuel economy goals of 33 mpg by 1995 and 41 mpg by 2000 and that suppliers themselves will be instrumental in helping the Big 3 achieve that economy.

The position stands in stark contrast to the U.S. automakers, who are reluctant to commit to specific numbers.

A new survey of domestic component producers indicates they believe they would have no problem with a 45 percent improvement in corporate average fuel economy numbers.

U.S. automakers have committed to improving fuel economy in the '90s, but they are pushing for a system of flat percentage increases on a company-by-company basis. That system, they say, will prevent producers of larger vehicles from being penalized.

The supplier targets of 33 mpg and 41 mpg are still lower than those being proposed in a number of bills before Congress this year, however. At least three bills will reach the Senate this fall requiring the industry to have an average fuel efficiency of 45 to 50 mpg in 10 years.

"The survey results are surprising because of the attitude it reveals among the supplier industry," said Earl Landesman, principal with A.T. Kearney Inc., the international automotive consulting firm that conducted the study. "They're very gung-ho to meet the challenge. The public has the impression that the auto industry is running out of steam on improving fuel efficiency because there hasn't been much progress in the past two years. But here's the supplier industry saying that it's their responsibility, too, and they can do it."

Kearney asked 95 suppliers with combined revenues of $30 billion what mpg targets they considered realistic and how they would meet them.

Suppliers feel weight reduction is the answer.

"They're very determined that the answer is vehicle weight reduction," Landesman said of the survey results. "Everybody tends to look at the powertrain for the answer, but the majority think that weight reduction is the first key."

Weight reduction would be achieved with new plastic compounds, developed jointly between suppliers and the carmakers, and lighter metals for chassis components, castings and wheels, according to the survey answers.

Further efficiency will come from engine enhancements, the development and wider use of alcohol-based fuels, improved aerodynamics and, only as a last resort, vehicle downsizing.

A majority said that while they did not want to return to the "econo-box days of the early 1980s" or sacrifice vehicle performance, the industry must take a position on both fuel efficiency and emission control before the government legislates a position for it.

The survey participants predicted that if Congress forces automakers to meet a 50 mpg industry standard in the coming decade, Japanese carmakers, producers of small European vehicles, plastics manufacturers and automotive electronics producers will be the biggest winners. The biggest losers would be the Big 3, European luxury car producers, steel companies and stamping, castings and forging companies, the survey said.

Average industry fuel economy improved dramatically between 1975 and 1982 as the auto industry was rocked by escalating gasoline prices, import sales competition and a U.S. recession. Average vehicle fuel economy increased by 28 percent between 1975 and 1979, by another 28 percent between 1979 and 1982, and by 10 percent between 1982 and 1988. In 1989 it will actually decrease a bit, according to figures from the Environmental Protection Agency.

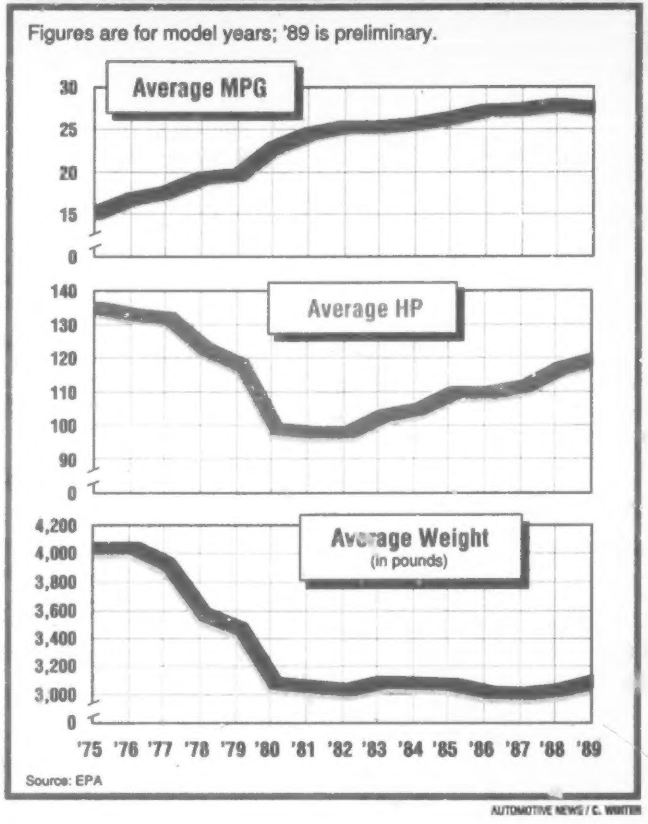
While the suppliers expressed confidence that meeting tougher industry requirements would boost their own revenues and either increase or not affect their earnings, they acknowledged their OEM counterparts would not be so lucky. The majority foresee a decrease in automaker profits if new fuel efficiency technology must be implemented.

What's most important piece for better mpg?

A.T. Kearney asked 95 U.S. suppliers which components need most development to improve fuel economy. These are their top responses:

Fuel Systems	29%
Electronics	14%
Tire Design	11%
Multi-valve engine	9%
Combustion chamber design	8%
High-temp engine material	7%
Valve train design	5%
Transmission gear ratios	5%
Continuously variable trans.	3%

Car fleet fuel efficiency



Figures are for model years; '89 is preliminary.

Loss at Nissan could hurt UAW at Big 3

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — While the United Auto Workers deal with their July 27 defeat at unionizing Nissan Motor Co.'s U.S. operations, they may have more to worry about than they think.

"The real implication of the Nissan election is what it portends for the domestic carmakers," said Michael Kane, director of the U.S.-Japan International Management Institute at the University of Kentucky in Lexington. "The transplants are now in a better competitive position vis-a-vis the Big 3. Even though the salaries and benefits at the transplants aren't much different from what the unionized domestic companies are paying, there is still a competitive difference.

"That makes the union itself more vulnerable. Because the U.S. carmakers are at a competitive disadvantage, they now have more ammunition to go back to the union and ask for a new round of contract concessions," Kane said.

But Irving Bluestone, professor of labor studies at Wayne State University and former head of the UAW's GM Department, counters that union representation does not put the Big 3 at a disadvantage.

"Labor cost is not the real issue of competitiveness in the industry any more," Bluestone said. "It accounts for well under 30 percent of total costs. And besides, there is really not that much difference now between domestic wages and wages in the Japanese industry. Management needs to look at some issue other than labor costs to improve its competitiveness."

Last month, UAW organizers lost a 16-month drive to unionize Nissan Motor Manufacturing Corp. in Smyrna, Tenn., when almost 70 percent of the plant's 2,400 workers voted to remain non-union.

The UAW denounced the July 27 election but did not challenge the results. Plant organizing operations have been largely dismantled.

The union suffered a similar setback in 1986 when it withdrew its petition for an election at Honda of America Manufacturing in Marysville, Ohio. As Honda prepares to open a second auto plant nearby in East Liberty, Ohio, management says it is aware of no further organizing activity.

William T. McGrath Jr., an automotive industry management consultant in Cleveland, also believes the transplant fight will affect UAW-Big 3 relations. McGrath, senior vice president for automotive with the consulting firm A.T. Kearney Inc., speculates that if one sector of the industry is unionized while another isn't, "the cooperative spirit that now exists between the UAW and the carmakers could be strained."

Bluestone argues that the domestic companies' relationship with the union actually enables them to collectively solve problems. "The UAW has a long history of working with management to improve profitability. I don't see that changing."

Meanwhile, the UAW has begun organizing efforts at Subaru-Isuzu Automotive Inc. in Lafayette, Ind., even though the plant doesn't start production until September, and at Toyota Motor Manufacturing in Georgetown, Ky.

SIA's reaction has not been meek. Within days of the UAW's Nissan defeat, SIA issued a statement departing from a previously neutral attitude toward unions.

"SIA does not believe that a third party such as a union is necessary at SIA," the company said. "Our company relies upon team cooperation. We feel this team approach at SIA makes any third-party intervention unnecessary."

In April, the union opened an organizing office in Georgetown, Ky., home of Toyota Motor Co.'s year-old, $1.3 billion car plant. Plant management has vowed to remain neutral on the issue. William Young, the UAW's organizing director in charge of Toyota, declined to discuss union plans.

Incentives keep trucks near last year's record

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Truck sales in the United States firmed in July under the impetus of heavy incentives. Overall, industry sales were just slightly below a year ago.

The strengthening in the industry's performance is chiefly due to the Class 1-3 light-duty segment where many buyers are rushing to take advantage of incentives and to avoid price hikes on new models this fall.

Industry sales for the first seven months of the year continue to be very strong.

Based on their current levels, they are still within range of hitting 5 million for the year and of coming in second-highest behind last year's 5.2 million record.

Overall, manufacturers retailed 433,670 trucks in July, off 2.15 percent from 1988's 443,210 deliveries.

The medium-duty Class 4-5 segments showed the biggest strength in July, followed by heavy-duty Class 8 sales which slipped into the minus column for the first time this year.

Class 1-3 light-duty sales of 406,733 during the month were off 2.02 percent from 415,113 a year earlier, according to Automotive News calculations based on vehicle manufacturers' reports.

Class 4 sales of 2,421 were up 26.03 percent from 1,921 in 1988, according to the Motor Vehicle Manufacturers Association.

Similarly, MVMA reported Class 5 sales of 615, up 12.02 percent from 549 a year earlier; Class 6 sales of 3,181, off 17.61 percent from 3,861; Class 7 sales of 8,318, off 9.55 percent from 9,196; and Class 8 sales of 12,402, off 1.34 from 12,570.

All these truck segments, except Classes 4, 7 and 8, showed an improvement over their general trend this year.

Generally, Ford's Super Duty, which has been the sole impetus behind Class 4's meteroic rise over the past year, is beginning to level off a bit. It has been drawing sales from both the light Class 3, as well as medium-duty Class 5-6 segments, according to company officials.

The slowdown in the growth of the Super Duty explains some of the recent rebound in Classes 5-6.

During the first seven months of calendar 1989, light-duty Class 1-3 sales of 2,795,571 were off 4.81 percent from 2,936,693 a year ago.

Year-to-date Class 4 sales of 16,323 were up 35.96 percent from 12,006 last year.

Class 5 sales of 3,917 were off 18.21 percent from 4,789 a year earlier.

Class 6 sales [illegible] were off 30.00 percent [illegible]

Class 7 sales [illegible] were off 6.20 percent from [illegible] year, and Class 8 sales [illegible] were still up 4.82 percent from [illegible]309.

Reflecting the weakening in Class 8 demand, Mack Trucks said it is cutting manufacturing and assembly rates for its heavy trucks. Mack said it plans to build 45 percent fewer Class 8 trucks during the third quarter than in the second quarter.

A company spokesman said specific production numbers had not been finalized yet.

Industry analysts have pointed out that not only Mack, but a number of other Class 7-8 manufacturers, like Ford, have been reducing their production schedules in consideration of the slowdown in market demand.

Heavy-truck manufacturers are currently revising their estimates of full calendar year sales in view of the softening market.

Class 8 orders decline

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Net new orders for heavy-duty Class 8 trucks totaled 10,681 in June, down 12 percent from 12,120 in June 1988 but an improvement from the 8,755 units ordered in May.

Deutsche Bank Capital Corp., an investment firm, said it continues to believe that order rates have peaked, with the current annual rate of orders running at about 130,000 units.

Frank Prezelski, an analyst with Deutsche Bank, said the sharp order declines of earlier months appear to have abated.

With retail sales of 14,006 in June and production of 15,000, order backlogs are dropping.

June's backlog of 52,532 units was down for the first time since October on a year-to-year basis and has declined steadily since it peaked in February, Prezelski said.

All manufacturers have now scheduled production cuts. The decline in the number of units built began showing up in July.

But the cancellation rate for new-vehicle orders has turned upward again and has approached what Prezelski called "a danger point of 20 percent."

June's order cancellation rate was slightly over 19.5 percent.

The industry is expected to monitor order cancellation rates even more closely than normal in the coming months because rates that consistently exceed 20 percent tend to be harbingers of downturns.

Deutsche Bank Group said it believed heavy-truck sales have peaked and will continue to drift downward.

Although near-term demand for heavy trucks could jump slightly as a result of lower interest rates, the investment firm said it believes the trend during the next few quarters will be downward.

It doesn't expect "prebuying" of vehicles to be a major factor in 1990.

It still sees U.S. retail sales of 135,000 to 140,000 Class 8 trucks in calendar 1990, down slightly from a projected 145,000 this year.

The modest downturn is not expected to have any major effect on the heavy-truck industry.

Companies like Navistar and Mack are expected to see an increase in earnings, while others whose sales have been extremely strong — such as Paccar and Eaton — are expected to show a modest earnings decline.

SERVICE MANAGEMENT

Makers, insurers joust over non-OEM crash parts

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

The automakers and the auto insurance industry are waging a heated debate over the use of non-genuine sheet metal crash parts to repair vehicles after collisions.

To win the support of consumers and body-shop operators, the automakers are publicizing the disadvantages of using non-genuine parts, such as loss of new-vehicle warranty protection from corrosion for the sheet metal replaced and problems with fit, finish and structural integrity.

The insurance industry is promoting its stance that non-genuine crash parts reduce the cost of vehicle repairs and help address the problem of high insurance rates from the roots — by cutting the underlying costs that cause those high rates.

The insurance industry also says that tests show non-genuine crash parts meet federal safety standards.

Leading the automakers' charge in the debate is Ford Motor Co., which recently began an ad campaign aimed at body shop owners.

The Ford parts and service division ads suggest a paper bag to cover the head of the shop owner who must tell customers that genuine sheet-metal parts will not be used for repairs to their vehicles.

The ad advises shop owners, "When insurance firms tell you to use 'economy parts,' don't cover for them. Save labor, time and money with genuine Ford sheet metal — it's made right and fits right."

The ad theme, according to Kenneth W. Myers, Ford parts and service marketing manager, continues Ford's collision repair industry information campaign, which has highlighted the shortcomings of non-genuine crash parts and reminds repairers that an informed customer is more likely to be a satisfied customer.

An estimated 30 million vehicles are damaged in accidents in the United States each year, according to Ford, and non-genuine parts are used in as many as 10 percent of those repairs. A decade ago, non-genuine crash parts were used in only a fraction of repairs, Myers said.

As automakers reduced year-to-year design changes on some models, he said, makers of non-genuine parts were able to avoid high tooling costs and focus on standardized parts.

Many foreign manufacturers, especially in Taiwan, produce non-genuine parts.

Growth of non-genuine parts has been exponential, Myers said. For example, auto body stamping imports from Taiwan jumped from $35,000 in 1978 to nearly $35 million in 1987, according to the U.S. Department of Commerce.

Quality testing of non-genuine crash parts by Ford and other vehicle makers has shown consistent problems with fit, finish, structural integrity and corrosion protection, according to Myers.

The automakers also emphasize that non-genuine crash parts are not covered under their new-vehicle warranties. Also, warranties are nullified for other genuine parts that are damaged as the result of the installation of non-genuine crash part.

Ford's campaign reflects the attitudes of other automakers.

General Motors graphically points out the differences between genuine GM and non-genuine replacement parts in a brochure available at GM dealerships.

In a brochure available at Chrysler Motors dealerships, Chrysler emphasizes the difference between genuine and non-genuine parts and the customer's right to specify genuine parts. Most non-genuine parts, Chrysler said, require extensive rework in order to make them fit.

"A part that doesn't fit right," said Frank Alexander, product manager for for sales and marketing at GM service parts operations, "not only looks bad but also can cause wind noise, water leaks and damage to other parts of the vehicle — damage that won't be covered by the new vehicle warranty. We believe the consumers have a right to know that."

On its side of the debate, the insurance industry notes that one way insurers are trying to reduce auto insurance costs is by advocating the sale of competitive replacement parts made by independent manufacturers.

The Alliance of American Insurers in Schaumburg, Ill., which represents some 165 insurance companies, recently conducted a study that showed a 1988 Buick Skylark Custom coupe valued at approximately $12,500 would cost more than $40,300 to rebuild using genuine replacement parts.

The repair figure,the Alliance said, does not include the cost of labor which can range from $15 to $60 per hour.

Rodger S. Lawson, senior vice president of the insurers' alliance, said independently made replacement parts save money because they cost less than genuine parts, and the competition drives down the cost of genuine parts.

For example, the insurers' alliance noted that a 1988 Pontiac Grand Am hood cost $210 from the original manufacturer and $188 from an independent maker, while the fender of a 1988 Mazda B200 sells for $198 from the OEM and $150 from the independent.

"The effect of competition can be seen in examples such as a 1983 Dodge Aries fender, which the OEM sold for $221 in 1983," the alliance said. "By 1986, the same fender was down to $87."

The insurance industry also takes issue with some automakers' contentions that using parts from suppliers other than OEMs may mean that the car no longer meets several federal motor vehicle safety standards.

Insurance Institute for Highway Safety specialists say that is not the case because with the exception of the hood, the cosmetic parts used to repair cars are irrelevant to safety. Parts like fenders, door panels and grilles cover the car like skin; they serve no structural or safety function, the specialists say.

The automakers and insurance industry will continue to debate the merits of genuine and non-genuine crash parts.

In all likelihood, the issue will be decided in state legislatures and the U.S. Congress where the automakers — the Big 3 plus several Japanese firms — are pushing legislation to require disclosure of the use of non-genuine sheet metal to the consumer before repairs are made. Twenty states already have enacted disclosure legislation and several more are considering it.

Service volume moves upward for June and 1st half

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business in new-car dealerships continued on the plus side in June and for the first half of 1989, according to the Automotive News Service Index.

June's shop volume rose 2.9 percent over the business recorded in June 1988, and volume for the first half was up 2.7 percent.

The Service Index is compiled from figures on parts and service business supplied by a cross-section of the nation's dealerships.

All indicators in the index, except repair orders written, gained in June and the first half.

Repair orders dipped 3.6 percent in June from the year-ago month and 2.4 percent for six months.

Still, gross profit on all labor, parts and accessories sales was up 2.0 percent for June and 3.8 percent for the six-month period.

Total labor sales (customer-paid and warranty) were up 6.0 percent for the month and 3.7 percent for the first half, while shop parts sales (customer-paid and warranty) rose 2.2 percent in June over the year-ago figure and 2.9 percent for the January-June period.

June sales of all parts and accessories were up 1.8 percent, while year-to-date sales increased 1.4 percent.

SERVICE INDEX
102.9★

	June '89 vs. June '88	Jan.-June '89 vs. Jan.-June '88
Gross Profit on All Labor and P&A Sales	+2.0%	+3.8%
Repair Orders Written	−3.6%	−2.4%
Total Labor Sales (Customer & Warranty)	+6.0%	+3.7%
Shop Parts Sales (Customer & Warranty)	+2.2%	+2.9%
Sales of All P&A...........	+1.8%	+1.4%

★ Survey by Automotive News shows that dealers' service and parts business in June 1989 was 102.9 percent of business in June 1988. Service business in the first 6 months of 1989 was 102.7 percent of business in the corresponding period in 1988.

U.S. parts makers increase share of import aftermarket

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Domestic parts manufacturers continue to expand their share of the aftermarket for import nameplates, and they indicate sales could be better, according to a survey by Easton Consultants of Hopkinton, Mass.

The firm's fifth biennial survey revealed that U.S. parts makers recorded an average sales growth of 15.5 percent per year in import parts from 1984 to 1988.

Henry P. Allessio, a partner in the management consulting company, said sales of repair parts grew more than twice as fast as sales of maintenance parts.

The traditional channel of parts distribution — from parts makers to full-service warehouse distributors to local jobbers to independent repair shops — is the largest channel of import vehicle parts sales, according to Allessio.

"These traditional customers are supported mainly by domestic parts manufacturers and, to a lesser degree, by full-line parts importers/distributors," Allessio said.

"Despite the strong sales growth of import vehicle parts by domestic makers in the traditional channel," he said, "the manufacturers cited several factors that were keeping them from gaining even more market share. The reasons are both supply- and demand-driven."

According to manufacturer respondents, the single greatest reason for not gaining bigger market share is the average low overall volume per import part, which makes tooling more expensive.

Other major reasons listed include parts manufacturers' perception that owners of import vehicles don't use the traditional service outlets and the lack of training in repairing import vehicles among traditional repair outlets.

SERVICE BRIEFS

Ziebart buys Tidy Car

TROY, Mich. — Ziebart International Corp. has purchased Tidy Car's franchise system of 275 automotive detailing outlets for an undisclosed sum.

Renamed Tidy Car International, the new wholly owned Ziebart subsidiary, will be assigned the Tidy Car franchise agreements for 140 outlets in the United States and master franchise agreements for another 135 outlets in Canada, Europe, the Caribbean and Pacific Rim countries.

The purchase of Tidy Car, along with the earlier acquisition of the Tuff-Kote Dinol franchise system, expands the number of Ziebart franchised car-care dealers worldwide to 975.

RVIA training slated

RESTON, Va. — Two training programs for dealer technicians have been scheduled by the Recreation Vehicle Industry Association.

Set for Oct. 2-6 in Orlando, Fla., and Nov. 6-10 in South Bend, Ind., the week-long Trouble Shooter Clinics will cover repair techniques on RV appliances and components. Each class is limited to 200 registrants and costs $200.

Electronic parts catalog

PORTLAND, Ore. — Freightliner Corp. has come up with an electronic parts catalog system to help its dealers with parts identification, inventory and ordering.

The system, called PartsPro, is said to reduce by as much as 60 percent the time required to find parts by dealership parts and service personnel.

PartsPro includes a display monitor, personal computer and compact disc reader. The system covers all Freightliners manufactured since 1978.

STP service center

DANBURY, Conn. — First Brands Corp., marketer of STP, Prestone and Simoniz automotive products, has entered the $25 billion automotive service market through a new subsidiary, STP Consumer Services.

The subsidiary's four STP Service Plus centers in Atlanta will serve as test sites before national expansion. All will offer STP's quick lube service and Prestone's cooling system flush and fill. One test center will also have a Simoniz full-service car wash.

Ronald A. Artzer, president of STP Consumer Services, said the firm also plans to roll out STP Super Service centers that will offer quick lubes, car washes and car-care services along with full-service gasoline sales by early 1990.

During the next five years, the company hopes to open 50 to 100 STP Service Plus centers and estimates sales in excess of $100 million. Although the initial centers will be company owned, a spokesman did not rule out a franchised network of centers.

Center customers will receive an STP Pit Pass, a computer database card that stores each customer's service history.

GM, Chrysler expect major export gains

By Al Fleming
AUTOMOTIVE NEWS STAFF REPORTER

TRAVERSE CITY, Mich. — The Big 3 have widely varying expectations for vehicle exports as they head into 1990.

General Motors, Ford Motor Co. and Chrysler Motors will ship an estimated 180,000 to 195,000 vehicles to foreign markets this year.

GM's expectations alone could boost the total an additional 30,000 to 40,000 units in 1990.

Looking further out, Chrysler sees its exports spiraling upward in the next decade. Ford's aspirations are less bullish than those of its two major competitors.

Chrysler, which launched exports to Europe this year, expects to ship 50,000 vehicles there in calendar 1989, plus another 25,000 to 30,000 to other parts of the world, for a total of 75,000 to 80,000. Gerald Greenwald, Chrysler Corp. vice chairman, estimates the annual total will grow to 100,000 in three to five years and to 200,000 in five to eight years.

Because of its aggressive posture as a global manufacturer, Ford is taking a more casual approach as an exporter of U.S. vehicles. Ford exported 41,000 in 1988 and expects to ship 45,000 this year.

Said Philip E. Benton Jr., president of Ford's automotive group: "I don't think of exports as a big deal. An export is a hesitation, while we get geared up to produce in a local market."

Ford is intent on building global design and manufacturing centers of expertise. Under Ford's strategy, individual operations have been tapped to develop products for major markets worldwide.

Benton said that by committing money and people to design and engineer a product at a designated "center of responsibility," Ford realizes "enormous potential" for lower costs and improved quality.

Lloyd E. Reuss, GM executive vice president, said the company's exports "should be in the 60,000 to 70,000 range" this year, and 100,000 in the 1990 model year.

He said in anticipation of long-range growth in exports, GM has been reorganizing and strengthening its export operations.

"We used to treat the export vehicle as sort of an add-on," Reuss said. "Now, we're designing products for export and doing the work here, rather than sending vehicles to Germany or Japan for major rework."

In comparing GM's international approach to Ford's assigning world-vehicle design responsibilities to designated areas, Reuss said: "We are not taking the Ford approach. We are working the other way. We think it's very important to have our creative people in the market where they are designing and producing the product."

Reuss, Benton and Greenwald were speakers at the University of Michigan Management Briefing Seminar here.

Sales climb on hints of price hikes

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Sales of U.S.-built cars and light trucks climbed 8.09 percent in early August as many dealers began to alert customers to price hikes on 1990 models. Also, rebates were in full force.

In the Aug. 1-10 period, deliveries of U.S.-built vehicles totaled 304,150, up from 281,380 last year. Both periods had nine selling days.

The eight U.S. carmakers sold 190,301 domestic autos, up 7.43 percent from 177,145 in early August 1988. Only Ford Motor Co., Chrysler Motors, Toyota and Mazda reported year-to-year gains.

Light-truck sales advanced to 113,849, up 9.22 percent from 104,235 last year. The four domestic light-truck makers reported sales gains of 5.13 to 14.55 percent.

In early August, dealers said, they cashed in on customer concerns about price rises. "We let customers know there is a price increase coming, especially in the van line," said Greg Miciotto, new-car sales manager at Bill Hanna Ford in Shreveport, La.

Customer awareness of price hikes helped sales but "we're getting a very tough buyer. He's not concerned if you make a nickel," said John Schroder, general manager of Hansen Chrysler-Plymouth in Nashville, Tenn.

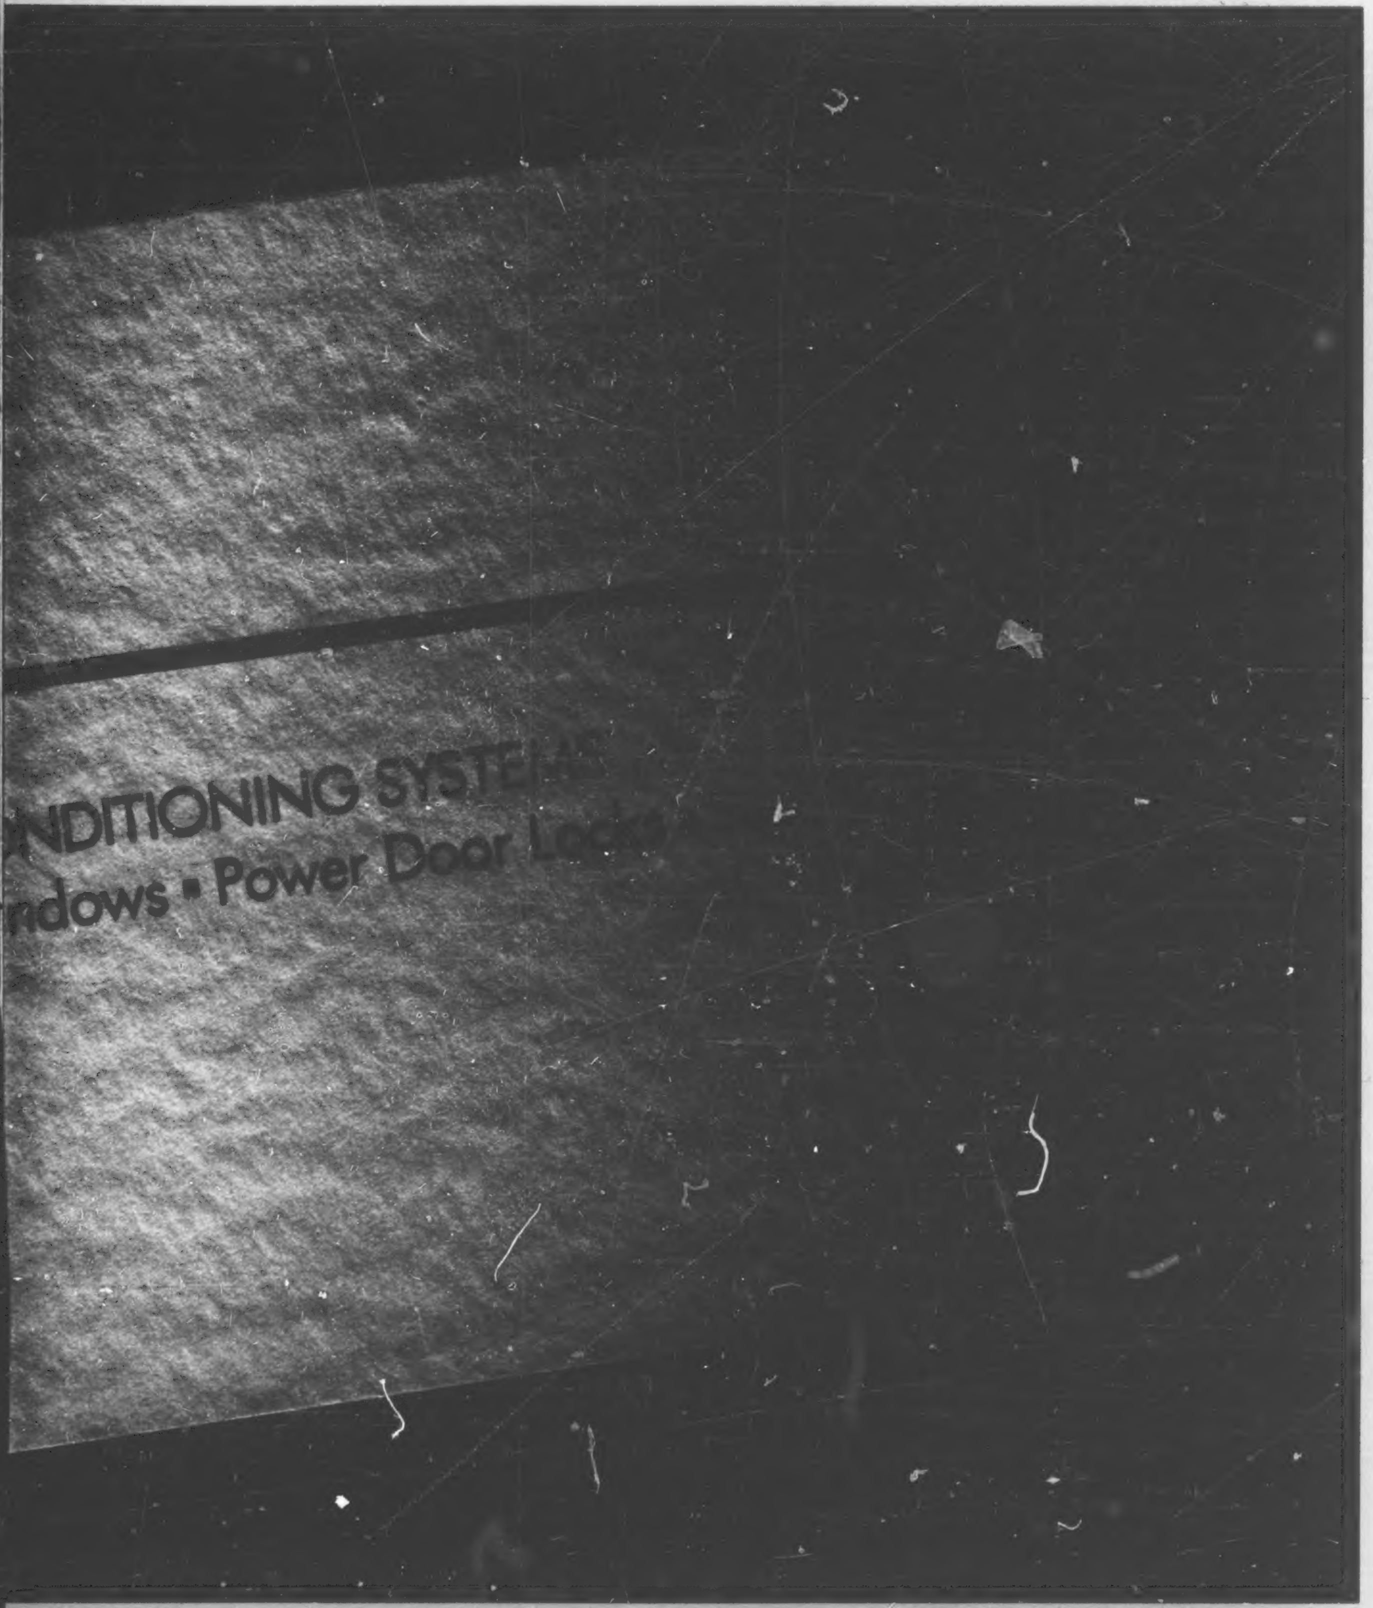
Ford reported the biggest gain in car sales; it sold 17.59 percent more cars in early August than it did last year. Thunderbird, Cougar and Probe were star performers.

While GM showed a 2.73 percent loss, Cadillac, Buick and Pontiac posted increases.

Chrysler boosted its car deliveries by 5.55 percent. Sundance/Shadow sales rose 38.65 percent.

Among the transplants, Toyota sold six times as many U.S.-built cars as it did last year. Mazda delivered 11.28 percent more MX-6s.

Nissan sold 18 fewer U.S.-made Sentras than it sold in early August last year.



Europe's sales boom slows down in July

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — New-car sales growth in Western Europe stalled in July following a 5 percent rise in June.

The lackluster 0.4 percent increase in 17 Western European countries during July — the second flat month of the last three — is further evidence that a long-expected decline in European sales may be at hand.

But sales for the first seven months of the year remained 5.6 percent ahead of 1988, which brought a full-year record of just under 13 million units. Most analysts believe a 13-million-plus year is all but assured for 1989.

European sales totaled 8,293,200 units through July, up from 7,856,800 last year, according to industry estimates compiled by Automotive News.

July sales were 1,007,700, compared to 1,003,400 in 1988.

Fiat Group, including the Fiat, Alfa Romeo and Lancia brands, remained the volume leader, with sales of 1,293,700 for seven months — a 15.6 percent market share and a 6.1 percent rise in volume.

The Italian group's July sales rose 0.8 percent to 170,500. The Fiat brand fell 2.2 percent to 122,000 for the month, while Alfa increased 10.7 percent to 22,200 and Lancia was up 8 percent to 26,300.

Second-place Volkswagen Group, Europe's sales leader for the past four years, continued to narrow the gap between itself and Fiat. The German group boosted sales 13.9 percent in July to 183,000 — outselling Fiat by 12,500 cars.

In the first seven months, VW group sales, including VW, Audi and Seat, rose 7.8 percent to 1,255,300, a 15.1 percent market share.

The market share increase for Peugeot SA — Europe's fastest-growing carmaker during the past two years — has slowed as a result of capacity constraints. Its Peugeot and Citroen brand sales dipped 1.2 percent in July to 128,800 units. For the year-to-date, sales rose 7.5 percent to 1,074,100, good for a 13 percent market share.

Ford continues to hold a narrow, but diminishing, lead over General Motors for fourth place. In July, GM outsold Ford by 7,600 cars. GM sales for the month rose 0.1 percent to 102,200, while Ford dropped 4.6 percent to 94,600.

Ford sales totaled 929,600 after seven months, an 11.2 percent share and a 5.9 percent increase over last year. GM stood at 905,200 — a 10.9 percent share and an 8.7 percent hike in volume.

Renault sales improved 5.9 percent through July to 851,200, a 10.3 percent share. July sales rose 5.7 percent to 118,500.

Among Europe's specialty makers, Mercedes-Benz sales dropped 4.7 percent through July to 262,600, a 3.2 percent share.

Meanwhile, BMW and Nissan both edged past Austin Rover in the year-to-date compilations during July. BMW's share was 2.9 percent after seven months following a 15 percent jump in sales to 243,300 units. Nissan's sales were 237,100 through July, an 8.3 percent increase and a 2.9 percent share.

NEW-CAR SALES BY COUNTRY IN EUROPE

Country	7 mos., 1989	Percent gain/loss
West Germany	1,763,700	+ 2.9
Italy	1,561,900	+ 9.2
France	1,347,800	+ 6.9
United Kingdom	1,247,500	+ 7.7
Spain	717,000	+10.3
Netherlands	347,900	+ 0.4
Belgium-Luxembourg	306,000	− 2.3
Switzerland	222,300	+ 6.9
Sweden	182,700	− 9.0
Austria	181,800	+11.8
Portugal	119,200	− 0.8
Finland	115,000	+ 5.5
Ireland	56,700	+27.3
Denmark	50,900	−15.5
Greece	41,000	+21.2
Norway	31,800	−28.7
Total	8,293,200	+ 5.6

Austin Rover's sales have dropped 5.7 percent for the year to 234,900, 2.8 percent of the market,

Toyota is off 2.5 percent for the year to 202,500, a 2.4 percent market penetration. Volvo is down 0.4 percent to 159,100, a 1.9 percent share. Mazda is down 7.8 percent to 139,200, equal to a 1.7 percent share. Mitsubishi is up 9.9 percent through July to 100,800, a 1.2 percent share, and Honda slipped 5 percent to 81,800, or 1 percent of the European market.

Combined Japanese sales through the first seven months rose 1 percent to 872,800, a 10.5 percent market share, following an 11.2 percent share for the Japanese during 1988 in Western Europe.

All four major European national markets improved in the first seven months, though both West Germany and the United Kingdom were down in July.

West Germany, Europe's biggest market slipped 1.5 percent in July to 232,000 units. But for seven months, Germany was 2.9 percent ahead of 1988 with 1,763,700 sales. Last year was the country's second best ever with a full-year total of 2.8 million sales, the country's second best year ever.

Italy was 9.2 percent ahead of last year at 1,561,900 units through seven months. July sales were 3.5 percent above the same month last year at 210,000.

France was 6.9 percent ahead of 1988 at 1,347,800. In July, French sales totaled 221,000, a 5.3 percent increase over last year.

United Kingdom sales dropped 4.5 percent in July to 51,100, but were up 7.7 percent for the year to date at 1,247,500.

Spanish sales continued to rise in July, climbing 6.5 percent to 114,000. Through seven months, Spain was 10.3 percent ahead of last year with 717,000. For all of 1988, Spanish sales set a record of 1.06 million.

All-Italian IATO sport utility drives into European market

By Luca Ciferri
STAFF CORRESPONDENT

MILAN, Italy — One month after the press introduction of Bertone's Freeclimber, a sport-utility using a Daihatsu chassis and body mated to a BMW turbodiesel, a firm called IATO has announced an all-Italian competitor.

IATO was established in 1985 with the aim of designing, engineering and producing a brand new sport-utility vehicle created by the company's owner, businessman Francesco Cavallini.

To design and develop the new vehicle, he hired two engineers from Piaggio, Danilo Fabbrizzi for structural analysis and Vasco Antichi for body engineering.

Cavallini said the total investment of 13 billion lira ($9.2 million) is being kept to a minimum by using a traditional steel chassis with a fiberglass body and engines from Fiat. The four-cylinder powerplants include a 100-horsepower 1.6-liter unit, a 90-hp 2-liter version and an 86-hp turbodiesel from the Tipo line.

As a plant site, IATO chose Nusco, south of Naples, a small, agricultural village. The Italian government will reimburse 75 percent of the total investment since the zone is considered depressed since a 1982 earthquake.

IATO has begun pilot production and will assemble 50 units this month. European sales are expected to begin next month through the Organizzazione Graziella network, based in Turin.

IATO will cost $22,364 to $24,140.

Of the 3,400 vehicles slated for annual production, 1,400 will be exported to other markets on the Continent. The first contracts are for France and Spain. Exports to Portugal and Greece will follow soon, but Germany and Switzerland must wait for a version with a catalytic converter. There are no plans now for a right-hand-drive model or U.S. exports.

The front-wheel-drive vehicle will be priced at 31.5 to 34 million lira ($22,364 to $24,140). That is higher than its Japanese competitors, although it does carry more standard equipment including air conditioning and power windows. IATO will be built in a three-door five-passenger configuration with a pickup scheduled to be added in 1990 and a five-door in 1991.

S. African car buyers wait as labor woes hit makers

By Des Kilalea
SPECIAL CORRESPONDENT

JOHANNESBURG — Labor problems are disrupting the South African automotive industry at a time when there are waiting lists for many models of new cars.

During the past three weeks, strikes and lockouts at the plants of market leaders Volkswagen, Toyota and Samcor (which makes Ford, Mazda and Mitsubishi vehicles) have involved more than 13,000 workers and prompted Toyota to fire 3,600 assembly line workers last week.

The problems revolve around the call by the National Union of Metalworkers of South Africa, which represents most non-white auto workers, for wages and working conditions to be negotiated industrywide rather than on a plant-by-plant basis. Manufacturers, generally, have resisted the demand.

Negotiations broke down and the walkouts began. The stoppages have closed four plants for more than a week and waiting lists at dealerships are growing longer. The factories affected are Toyota's plant in Durban; VW's plant in Port Elizabeth; and Samcor's facilities in Port Elizabeth and near Pretoria.

Because of the stoppages, Toyota and VW have withdrawn from the wage negotiations. Both have said they will not resume talks until the workers return and plants are operating again.

The labor problems at the plants will hurt new-vehicle sales this year. Toyota, Volkswagen and Samcor account for about 60 percent of passenger-car Toyota and Samcor have a sizable portion of the pick-up market; Toyota and VW are forces in the minibus market; and Toyota is also a big producer of medium and heavy commercial vehicles.

Brand Pretorius, Toyota marketing director, expects current waiting lists of a week to 10 days to be lengthened slightly, but he said Toyota will try to make up lost production. A spokesman said VW had a backlog of three to six weeks on most vehicles before the walkout.

Toyota has lost production of 420 units a day, Samcor around 250 and VW about 300. A week's stoppage means a production loss of nearly 7,000 vehicles. Pretorius said Toyota dealer stocks are low, so the impact on sales will be immediate.

Toyota and VW have indicated willingness to reinstate workers and rejoin the talks if production resumes. But Delta Motor Co., which makes General Motors and Isuzu products, is taking legal action. The company, which was not a party to the talks, considers efforts to force a national wage agreement unconstitutional in terms of the industrial council and Automobile Manufacturers Employers Organization rules.

"We are not going to be railroaded into a relationship that we consider undesirable," said George Stegmann, a Delta director.

The parties are still far apart. The union is not believed to have revised its opening demand for a 6.58 rand ($2.40) per hour minimum with quarterly adjustments for inflation. But it has dropped its demand for an across-the-board 2 rand (73 cents) per hour increase to 1.50 rand (55 cents). Employers are apparently offering a 5.50 rand ($2) minimum.

Hot Acura holds pace toward 1990

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

GARDENA, Calif. — Acura's high-dollar NS-X sports car is on track for a mid-1990 introduction.

The small assembly plant that will build the low-volume NS-X will open early next year in Tochigi, Japan, a company spokesman said. The car will debut in the United States with an annual supply of about 3,000 units and also will be sold in Europe and Japan.

The mid-engined two-seater will be priced at $50,000 to $60,000 and will introduce some engine valve technology.

An all-new 3-liter, naturally aspirated V-6 exclusive to the NS-X will have the first application of Honda's V-Tec technology, variable valve timing and lift control.

Not only will the timing of the opening and closing of the two intake and two exhaust valves on each cylinder vary by engine speed and load, but so will the amount of lift, or how far each valve opens.

That added amount of control over the breathing is largely responsible for the engine's high power output. Without turbocharging, the 3-liter is rated at 270 horsepower, or 90 horsepower per liter of displacement.

V-Tec technology and the 270-hp rating are slowly quieting speculation among Honda watchers that the company will substitute a more exotic engine, perhaps a V-10 derived from Honda's Formula One racing program, before the NS-X is introduced.

"I thought that a car priced at $50,000 to $60,000 and especially from a division of Honda would have a more exotic engine," said Christopher Cedergren, an automotive analyst at J.D. Power and Associates, Agoura Hills, Calif. "They might surprise us yet, but the chances are very small. It may just be wishful thinking on my part."

Cedergren still expects Acura to introduce next spring a compact-sized car based on the new-for-1990 Honda Accord platform that will fit between the Acura Integra and Legend and plug the price gap between those two models.

In the fall of 1990, Acura is scheduled to unveil a new Legend.

IMPORTS

FROM PAGE 3

helped their Japanese importers.

The 1990 Mazda Miata, for instance, constituted 19 percent of Mazda's import sales in July at 4,105 units, even though sales of the new ragtop began in late May.

Mazda's MPV minivan, which was introduced last fall, made up another 18 percent of the monthly figure and 16 percent of sales for seven months. On the strength of those two models, July import sales increased 11 percent for Mazda compared to July 1988. But for the first seven months, Mazda's import sales fell 4 percent to 129,549.

Subaru's Legacy, another 1990 model, made up 28 percent of Subaru sales for July, at 3,714 units out of a company total of 13,364 for the month. Legacy went on sale in April.

Loyale, Subaru's high-volume line of sedans, wagons and three-door hatchbacks that was rebadged and streamlined for April sales, made up another 19 percent of July's total, while sales fell for the older models. Volume of the older station wagons, for instance, fell 78 percent from July 1988.

Subaru's sales for the first seven months of 1989 were virtually even with 1988.

Demand for the new 1990 Acura Integra, which was introduced last spring, helped fuel a 16 percent rise in year-to-date sales for Acura, to 83,825. Counting both old and new models, Integra sales were up 47 percent in July compared to the same month last year, while Legend sales declined 16 percent from a year earlier.

The new Nissan 240SX, which went on sale in December 1988, helped Nissan show a 14 percent increase in import deliveries through July. For the month, Nissan import sales were up 21 percent compared to July 1988. Sales of the 240SX and the 200SX together accounted for about 18 percent of all year-to-date Nissan import sale.

And the 9000-CD, which went on sale in March, helped Saab boost July sales 3 percent compared to July 1988. Seven-month sales were off 13 percent, largely because of a 24 percent decline in 900S sales.

Honda import sales rose 10 percent in July to 26,442, but import sales were off 2 percent for the seven months to 142,222. The company is importing more Accords while the Honda of America Manufacturing plant in Ohio retools for a new Accord model. Meanwhile, the company is making more Civics in the United States, which has cut the number of imports.

Toyota imports fell about 33 percent in July and 18 percent for the seven-month period compared to last year. Corolla and Camry suffered the biggest declines. Import sales of those models dipped as U.S. production increased.

Lotus insists Miata fever won't swamp its $30,000 Elan

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

The head-turning excitement caused by Mazda's MX-5 Miata has raised the stakes in the two-seat roadster game that Lotus will join next spring with the Elan.

Miata, described as a throwback to the rear-wheel-drive, open-top charms exemplified by the old Elan produced from 1962 to 1973, increases the risk in Group Lotus' gambit to add a small front-drive, two-seat, $30,000 "entry-level" vehicle to its U.S. line.

But Lotus Managing Director Michael Kimberley brushes off inevitable comparisons and views the new Mazda as a plus for his car. He says the Miata will form a new base market from which Elan buyers will emerge.

"I don't think there is any comparison at all," he said. "In styling terms, the Miata is really a classic car and our car is uniquely different. A lot of people will want to move up into a Lotus from what is a well-prepared market for two-seat convertibles. And those owners will want to move up into something with more performance and with a lot more charisma. A Lotus is a Lotus.

"I've obviously crawled all over the Miata and it is a very nice little car," said Kimberley. "It's very well executed and very professionally engineered, but it's not a Lotus and it's not an Elan of the '90s. We intend to be a standard-setter not only for visual appearance, but with new technology because of the synergy between our car company and our research and development."

While Kimberley says eventual U.S. sales will be limited to 1,500 to 1,600 Elans per year, some industry observers consider the Elan vulnerable to the Miata, for which Mazda projects annual sales of 40,000. Lotus' aims are modest, but the Cadillac Allante has demonstrated how even low-volume targets can be missed.

The Elan had been expected to debut next month at the Frankfurt auto show in West Germany. But Kimberley now says it will probably bow at the Tokyo and London shows in October and possibly be seen first in the United States at the Detroit and Los Angeles shows in January.

Lotus' new Elan has virtually no rear overhang. HIDDEN IMAGE/HANS G. LEHMANN

The Elan will go on sale first in the United Kingdom and possibly one or two European countries. The U.S. introduction is slated for next spring.

The first pilot models are on the line. Lotus plans to produce 1,500 Elans in the first 12 months on a new line — with 600 to 700 sold in Great Britain. Maximum capacity is 3,000 Elans, achievable in two to three years, with about half going to the United States. "It is slightly lower than the 1,800 I originally planned," Kimberley said.

He said marketing studies suggest Lotus could sell 360 Elans a month in the United States.

"I think it is important for us to make sure we always have far fewer cars than the market is demanding," he said. "When there is overproduction, cars suddenly become less desirable."

Lotus has yet to reveal specifications, including the length of the stubby roadster. But it is reportedly about 143 inches long, compared to the Miata's 155.4 inches.

"It is a small car, but exceedingly well-proportioned," said Kimberley, who is 6 feet 5 and claims to have no problem fitting comfortably into the cockpit.

The Elan will reportedly be powered by a 1.6-liter, 16-valve four-cylinder engine from Isuzu developing 125 to 135 horsepower. Miata also has a 1.6-liter, 16-valve four-cylinder, which produces 116 hp.

Lotus is readying its U.S. dealer network for the Elan launch. Currently, 68 outlets sell about 300 Lotus Esprit units annually. Lotus established a wholly owned U.S. distribution arm in early 1987 and since then has completed a 48 percent turnover in dealers.

"We have our strongest-ever dealer network in the U.S. and that was the objective as we started to build up the network for the Elan," said Kimberley.

He said 16 open points remain throughout the country, though the Northeast region is essentially full.

RAGTOPS

FROM PAGE 1

Softtops have accounted for at least 1 percent of the U.S. auto market since 1986 and will approach 2 percent in 1989, analysts say.

That's a far cry from the 1963 peak of 7 percent, but also a sharp contrast to the 1970s, when convertibles all but vanished.

"We are near the peak of a boom," said analyst Thomas O'Grady of Integrated Automotive Resources.

During the first seven months of 1989, convertibles are up about 11 percent, to 106,573. They have expanded their niche at a time when overall car sales are down 6.4 percent on the year.

The largest volume convertible — Chrysler's LeBaron — is up 25 percent to 29,843 through July. Chrysler General Marketing Manager Clark J. Vitulli predicted more than 50,000 sales for the full year, up 20 percent over 1988.

Vitulli

Ford's Mustang convertible is up 25 percent through the first six months of 1989, to 20,782 units.

Convertible registrations jumped almost 50 percent in 1988 to 160,000 units and sales continue to rise in 1989. In 1982, registrations totalled 43,000 and accounted for 0.5 percent of the new-car market. Last year, convertibles took 1.5 percent of the market and some analysts say penetration could go as high as 2 percent this year.

O'Grady pegged a 1.8 percent share in 1989 and he forecast that convertibles will top 2 percent by 1992. But that is a long way from the 1963 model year, when convertible sales peaked at 7 percent of the new-car market — 542,000 units.

One reason is fuel economy. Convertibles usually carry about a 150-pound weight penalty — a not insignificant proportion of today's lighter weight models. Moreover, aerodynamics tend to suffer.

O'Grady also cited safety considerations and different car-buying tastes as reasons why the golden age of convertibles won't be duplicated.

"The mix might get up to 2¼ percent, but that would be the cap," he said.

Said Joel Pitcoff, research and analysis manager at Ford: "The big difference between now and then was that convertibles were available in almost every single segment."

Today, neither standard-sized models, nor basic U.S. subcompacts — a key droptop segment in Europe — have convertible versions.

"Secondly, the premium was relatively small over a hardtop — in those days a few hundred bucks," said Pitcoff. "The prices today are usually several thousand dollars higher, partly due to higher equipment levels. The economics of trading up have become a lot harder since the heyday."

Carmakers began thinning out convertible offerings in the late 1960s and early 1970s.

The last domestic droptop to drop out was the Cadillac Eldorado in 1977 and there were none built until 1982. The number of imported convertibles also declined. In the 1960s, virtually all two-seater and 2+2 imports were open-top.

Carmakers jumped back into the game following the emergence of a successful aftermarket cottage industry typified by ASC Inc. and Cars and Concepts, now called C&C Inc. ASC and C&C are still at the heart of the convertible business in Detroit. ASC does the Toyota Celica GT 4, Pontiac Sunbird, Chevrolet Cavalier, Camaro RS and IROC-Z V8 and Corvette and the 944 Cabriolet at its new plant in Weinsburg, West Germany. C&C turns out the Ford Mustang and forthcoming Beretta and Cutlass Supreme convertibles.

"When we came back in 1982, people wanted to know why it ever went away," said a Chrysler spokesman. "There was a pent-up demand."

"There has been a boom," said O'Grady. "Though in one sense the market was there, but the product wasn't. But it also has to do with baby boomers at this time of their lives. In their late 20s and early 30s people were more concerned with performance. Convertibles have come a little bit later, giving them some performance and a little taste of their youth."

The Chrysler spokesman said the average age of LeBaron convertible buyers is early 40s. Ford tracks a median age of 33 years for Mustang convertible buyers, only four years older than the Mustang coupe buyer and below the overall industry average.

Mazda's MX-5 Miata roadster introduced this summer has emerged as America's hottest automotive topic. Conventional wisdom is that the Miata may be creating a new segment, or at least reviving the affordable two-seater niche once populated by small, rear-wheel-drive British roadsters. Mazda projects eventual sales of 40,000 cars annually for its Miata.

"The Miata may revive interest in convertibles to the extent that people are attracted to the car, but put off by the kinds of tack-ons dealers are charging," said Ford's Pitcoff. "When the buyers find that dealers want $3,000-$4,000 above sticker, they may decide to take a look at a Mustang or a LeBaron."

Raising the roof: Convertible sales up, new models planned

GEO

FROM PAGE 1

several Geo models with unusual backdrops and a youthful musical score in the background.

The new, straightforward campaign will use the themeline "Getting to know Geo." It will address Geo's two biggest confusion points: "What is a Geo?" and "Where can I buy a Geo?"

The new campaign will use film footage of young Americans in and around their Geo models. The previous campaign used claymation characters, rear-screen projection and other MTV-like creative executions.

The brand ads will show a collage of different vehicles while talking about what Geo is. Product ads will position each product differently. For instance, the Tracker, a sport-utility vehicle also sold as the Suzuki Sidekick, will be positioned as a fun vehicle. The Geo Metro, also sold as the Suzuki Swift, will be positioned as an economical car.

To show where a Geo can be purchased, Erdman said the new ads will show a Chevrolet dealer sign that will come together with a Geo sign. The previous ads told viewers that the Geo could be purchased through select Chevrolet dealers and gave a toll-free number. The phone number is being dropped for the 1990 model year, said Erdman.

Erdman said the increased national effort will be backed by more advertising dollars from Chevrolet. Advertising Age, a sister trade publication to Automotive News, estimated that Chevrolet spent $30 million to $40 million million on Geo advertising in the 1989 model year.

Chevrolet is also increasing the dealer-profit margins, Erdman said. Dealers had told Automotive News that profit margins on Geo models are as low as $200. Some dealers had joked that margins were so low on Geo models that Geo letters were the initials for "Gross Equals Zero."

In addition to changing its creative approach, Chevrolet is also changing its Geo agency assignments.

Vic Olesen & Partners in Culver City, Calif., Chevrolet's advertising agency for the West Coast, will no longer handle national advertising for Geo on the West Coast. All national advertising for Geo will be created and handled by Lintas:Campbell-Ewald in Warren, Mich..

When Chevrolet hired Vic Olesen and Partners five years ago to create advertising for import-oriented West Coast consumers, it irked its long-time agency Campbell-Ewald. Last year, both Campbell-Ewald and Olesen created national Geo spots that ran in all parts of the country.

"It was not a decision made to pit agency against agency," said Erdman, who added that Olesen has been told to concentrate on finding niche markets for Chevrolet's domestic vehicles such as S-10 Blazer and Beretta.

Dealers are welcoming the change, Erdman said.

At the division's recent meeting with Chevrolet dealers in the South, dealers applauded when the new Geo strategy and advertising campaign were presented, Erdman said.

SUBARU

FROM PAGE 6

"Historically, Subaru station wagons have outsold four-doors three to one. With the Legacy, it's more like 50-50," he said.

"Also, we projected the LS luxury version would be about 15 to 20 percent of sales, and it's running more like 30-plus percent. Automatics are running higher than expected, and 4wd is running more than 50 percent. The 4wd four-door is doing better than expected. I think that's partly driven by ABS," which is available as an option on that car, Gibson said.

Gibson said the company might also sell up to 5,000 Legacys to daily rental companies for extra exposure, compared to about 20,000 of Subaru's older cars that were sold to rental fleets last year.

"We don't want to do a huge number and affect resale prices," Gibson said.

Subaru reported an 88-day supply of cars as of Aug. 1, versus 87 days July 1 and 95 days June 1.

CURRY

FROM PAGE 2

tine is a former deputy secretary of transportation,

Lobbyists who have met Curry say he is likely to be tougher than former administrator Diane Steed.

"My first impressions are that we will get more leadership from Curry than Diane Steed," said Brian O'Neill, president of the Insurance Institute for Highway Safety, a safety lobby funded by the insurance industry.

"Diane did not do things until political pressures built up and she was forced to do them. She did not exhibit leadership. Under her leadership, the agency was ducking issues."

O'Neill said he met with Curry and was assured that the agency will move forward with side-impact standards and light-truck safety regulations.

"He comes across as someone who is willing to show some leadership and move forward with safety initiatives that have been languishing within the agency for some time," O'Neill said.

An auto industry lobbyist concurred: "He's the one who will snap the whip to get things done. He's making his rounds and getting his ducks lined up. He will be tough and vigorous."

Curry served as commanding general of the U.S. Army Test and Evaluation Command, which included the nation's largest military test center, the Aberdeen Proving Grounds in Maryland, and the White Sands Missile Range in New Mexico.

After retiring in 1984, Curry became an adviser to television evangelist Pat Robertson's Freedom Council and later was president of the National Perspective, a private non-profit think tank controlled by Robertson.

Jaguar gets finance arm

Marine Midland Automotive Financial Corp., the largest bank-owned auto finance company, has formed a jointly owned captive finance company with Jaguar Cars to provide lease financing. It will be called Jaguar Leasing Corp.

In a separate arrangement under the name Jaguar Credit, Marine will provide "private label" retail and wholesale financing and capital loans to Jaguar dealers and their customers.

Marine will fund and service Jaguar Credit's programs. The joint company will be responsible for funding Jaguar's leasing programs, which Marine will service.

Operating through 13 regional offices nationwide, Marine has captive financing or private label arrangements with Mazda, Porsche, Subaru and Saab-Scania and also does business directly with other dealers. Its auto-related portfolio of managed assets was $7.2 billion at the end of 1988.

Marine Midland Automotive Financial is a subsidiary of Buffalo-based Marine Midland Banks, with assets of $26 billion.

Marine Midland Banks is a wholly owned subsidiary of the Hongkong and Shanghai Banking Corp.

— Louise Kertesz

GE, Mitsubishi set lease program

Mitsubishi Motor Sales of America has entered into an agreement with GE Capital Auto Lease to offer low-cost leases on the Mitsubishi Eclipse, Galant, Sigma and Montero.

The Triple Diamond Leasing program features high residual values, which reduce monthly payments. Terry Paape, GE Capital Auto Lease manager of sales and market development, said a 60-month lease on a Mitsubishi carries a $170 monthly payment, which he called the lowest in the industry.

GE Capital Auto Lease will fund and service the leases in a "private label" program for Mitsubishi Motor Sales.

In 1984, GE Capital Auto Lease and BMW of North America formed a jointly owned captive finance subsidiary, BMW Credit.

PRODUCTION

Auto output up for week; 123,749 built

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. auto production continued to climb last week as the makers scheduled 123,749 cars, 15.41 percent more than the previous week's 107,225 and 13.31 percent above the year-ago week's 109,208.

Each of those weeks was affected by downtime for changeover.

Last week's estimated production was split as follows: General Motors, 39.35 percent; Ford Motor Co., 27.72 percent; Chrysler Motors, 13.90 percent; Honda of America Manufacturing, 5.79 percent; New United Motor Manufacturing Inc., 3.23 percent; Toyota Motor Manufacturing U.S.A., 3.02 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.87 percent; Diamond-Star Motors, 2.08 percent; and Nissan Motor Manufacturing Corp. U.S.A., 2.04 percent.

The Allante line at GM's Detroit-Hamtramck plant is idle for model changeover until Sept. 6. The company's Lakewood, Ga., plant resumed output today after downtime for changeover.

Truck production was scheduled at 76,380 units last week, 2.05 percent below the prior week's 77,977.

GM will continue output "well into 1990" at its Pontiac Central plant in Pontiac, Mich., which had been scheduled to close at year-end, according to a GMC truck and bus group spokesman. When the medium-duty truck line is transferred to Janesville, Wis., the assembly of chassis and frames for special vehicles like school buses and delivery vans will be added.

GM will close three of its light-duty truck plants Aug. 28 for one week to adjust high inventories. The plants are: Moraine, Ohio; Shreveport, La.; and Pontiac West, Pontiac, Mich.

Navistar International shut its Springfield, Ohio, plant last week. Output is expected to resume today; the rate will be reduced 15 percent to 298 vehicles per day.

Mack Trucks plans to build about 45 percent fewer Class 8 vehicles this quarter than in the second quarter.

Ford idled its heavy-duty line in Louisville, Ky., last week due to a lack of dealer orders. Production was slated to resume today.

Recovery mode for Canada cars

Canadian auto output was targeted at 20,058 units last week, 85.07 percent above the 10,838 assembled the previous week when model changeovers slashed the total. Last week's production was 21.11 percent above the year-ago week's 16,562.

Scheduled truck output of 17,054 was 55.79 percent more than the previous week's 10,947 but 9.49 percent below the year-ago week's 18,843.

Slow sales caused Navistar International to close its plant in Chatham, Ontario, last week. The plant is expected to resume output Aug. 28.

Volvo's plant in Halifax, Nova Scotia, resumed output today after a three-week vacation.

WORLD CAR?

'All-American' Saturn will use components from transplants

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

The Saturn won't be so red-white-and-blue after all.

Hailed as America's answer to the foreign import, General Motors' Saturn line is supposed to use Yankee ingenuity to beat foreign manufacturers at their own low-cost, high-efficiency game and help re-establish the U.S. reputation for automotive know-how.

But when the car, a family sedan aimed at Toyota, Honda and Nissan buyers, finally rolls off the assembly line next summer, it will owe more than its inspiration to the transplants.

Japanese, German and U.S.-foreign joint-venture suppliers will provide the car's steel, brakes, windshields, windows, ashtrays, electrical motors, air conditioning parts and other components, as well as some of the tooling used to create it.

Although Richard G. "Skip" LeFauve, Saturn president, has stated that Saturn will not attempt to wave the flag to sell cars, it will appeal to American pride.

"There's something about a feeling of nationalism," LeFauve said in a previous interview with Automotive News. "Saturn was created to prove that we really haven't lost it in the United States, that we can build a small car at the quality and reliability levels today's consumers are demanding, and do it in a competitive price.

"It's the American answer to the import," he said. "If you'd like to buy a car designed and built in the United States, here's your opportunity."

The company has not formally revealed its suppliers and remains tight-lipped about the new car's components and technology. But dealers have been assured that it will have a domestic content in the mid- to high-90 percent range. As interpreted by one planned Saturn dealer, that would include parts assembled in Canada and Mexico, or parts produced in the U.S. by transplant operations.

But, some analysts say the con-

VW shuns rebates, will reduce prices

Salespersons get $150 extra per car

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

Following through on recent hints by Volkswagen management that the company will regain its value-leader status, dealers learned at their sales convention in San Francisco of revolutionary plans to "relaunch the Volkswagen franchise in the United States."

Volkswagen United States will officially announce in October a marketing assault that includes eradicating cash-to-customer rebates, a bonus payment plan aimed at maintaining sales force continuity, price reductions on current models and low introductory prices on future models.

The aim: to raise sales in 1990 to 200,000 from 168,800 in 1988 and the 150,000 target in 1989.

The first salvo in that assault is replacing rebates with significantly lower prices.

"We will not be in the retail consumer rebate business," said William J. Young, vice president of VW U.S.

"It is an inane, stupid strategy to charge the customer a certain amount and then give a rebate, even though he knows he's paying for the rebate in higher prices. It doesn't seem to me to give the customer enough credit (for being smart). VW wants to get out of the rebate business," he said.

But Young did say that as long as 1989 models remain on dealer lots, VW will continue its cash-to-customer incentives at "the same or greater" levels. VW's customer rebate program, due to expire Sept. 4, will continue to the end of the month or until all 1989 models are cleared.

On the 1990 models, VW will institute a plan that rewards the sales force for salesmanship and tenure at one dealership.

Under an installment plan, a salesperson will earn $150 per vehicle sold, paid over two years. The program works like this: In addition to regular earnings, the salesperson will receive the first $50 in-

Chevy, Olds, Buick retain ad themes

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Three General Motors divisions unveiled 1990-model advertising campaigns last week.

Chevrolet is keeping its "Heartbeat" theme for the fourth consecutive year, but will focus on product rather than image. Television spots featuring slice-of-life scenes have been replaced by commercials emphasizing the cars.

Chevrolet is focusing much of its efforts on its Geo line. Targeting a youthful audience, a Geo print ad pegs Toyota and Honda as the imports of the 1970s and 1980s, respectively, and predicts that the 1990s will belong to Geo.

While Buick is keeping its two-year-old "The Great American Road Belongs to Buick" slogan,

Time is now for passive restraints

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Nearly two decades of bitter debate on passive restraints end Friday. All cars produced for the U.S. market after that day must be equipped with some form of automatic crash protection.

And while the rule placates those who have worked hard to see air bags mandated in cars, the focus now shifts to expanding the standard to light trucks and even the means by which the automakers are satisfying the cur-

Market hurt by new-used price gap

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

GM Chairman Roger Smith once said that GM's best answer to low-priced compact cars sold by competitors was a two-year-old Buick.

Smith wasn't joking, but the real punch line is that the price gap between new and used cars is widening, kindled in part by price hikes for new cars and an apparent glut of used autos.

And the decline in used-car prices has affected almost everyone associated with the automotive industry, including manufacturers, dealers, customers and financial insititutions.

Isuzu builds car hopes on new platform

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

HIDDEN/HANS G. LEHMANN

Power moves to the front wheels in the new generation Impulse.

WHITTIER, Calif. — The 1990 introduction of a new-generation Impulse and Stylus is critical for American Isuzu's hope of expanding its car offerings.

"We have established ourselves as a truck company, then as a sport-utility company with Trooper II," said Jack Reilly, American Isuzu senior vice president and general manager. "The task ahead of us is to establish ourselves as a car company too."

He denied speculation that sales of the new cars would make or break Isuzu's long-term commitment to passenger cars: "The launch has no bearing on whether we stay in the car business."

However, sales success is needed to trigger the go-ahead on another car platform from Isuzu Motors, the Japanesse parent, Reilly said.

The new models are built on a single platform. Previously, Isuzu had two: one for the rear-wheel drive Impulse and one for the front-drive I-Mark four-door sedan and three-door hatchback. Stylus will be the four-door sedan replacement for I-Mark, and Impulse will be replaced by a sporty three-door, front-drive hatchback.

The three-door I-Mark hatchback will not be replaced.

The cars also will be sold by General Motors' Geo franchise as the Spectrum four-door and Storm sport coupe.

American Isuzu will get a third sport-utility vehicle, called Rodeo, for 1991, Reilly said.

Rodeo, like the Trooper II, will be based on the Isuzu pickup platform, but will have "a much rounder look," Reilly said. The wheelbase and overall length will be similar to the pickup but the profile will have "a less paramilitary look than Trooper and be more stylish to appeal to a younger market," Reilly said.

Isuzu will continue to market the Trooper II and smaller Amigo alongside the new sport-utility vehicle and will add a high-line version of the Trooper II, he said.

Volume projections are not yet final yet, but Reilly expects Rodeo to sell close to the Trooper II rate, about 50,000 units last year.

Rodeo's production site also is not final, but the new Subaru-Isuzu joint venture plant in Lafayette, Ind., is a possibility, Reilly said.

Reilly is upbeat about Isuzu's sales prospects for the rest of 1989 and 1990.

He is sticking to his earlier forecast of a 10 percent sales gain for calendar 1989 over 1988's 114,925 cars and trucks. Through July, sales were ahead of last year's pace by 6.1 percent, and he thinks the rest of the year will pick up a bit.

For 1990 Reilly is projecting a record sales year, between 131,000 and 140,000 cars and trucks.

Six key execs accept Saab's early-out offer

By John A. Russell
SPECIAL CORRESPONDENT

ORANGE, Conn. — Six key executives of Saab-Scania of America, including the head of the U.S. car division, are among 37 employees taking early retirement under an incentive package the company offered to cut costs.

Sten O. Helling, 51, executive vice president in charge of the car division, will retire Sept. 1, as will Eugene G. Agres, 61, executive vice president for administration and finance, and Lennart Lonnegren, 60, corporate communications director.

Also retiring are three of Saab's four regional managers, Walter Lawson, 54; Howard Smith, 57; and Philip Krantz, 58.

The retiring regional managers will continue as consultants until replacements are found. Sinclair hopes to fill the positions within two months.

The early retirement program, announced by Saab in mid-July, was offered to 58 employees. To qualify, employees over 50 years of age had to have more than five years' service.

Company officials admit Saab is under financial pressure. Seven-month sales in this country totaled 19,828, about 13 percent below last year's. In Sweden, the Saab Car Division is expecting a $150 million loss.

Helling, Saab's No. 2 U.S. executive, joined the company in 1980 from Volvo of America. He was part of the original management team put together by Sinclair after he joined Saab in late 1979.

He will remain on the company's executive committee as a consultant and assistant to Sinclair for one year.

Agres joined Saab in 1961 as treasurer and has been executive vice president for finance and administration since 1987.

Lonnegren, who also will be retained as a consultant, is a 26-year Saab veteran and the only executive from previous management.

NADA predicts rough year for dealers

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — One U.S. auto dealer in 10 could go out of business in the next year as dealer profits and vehicle sales fall, a National Automobile Dealers Association study warns, but industry analysts say most franchises will continue to thrive if strongly managed.

Dealer profits, as a percentage of total sales, have fallen from 2.4 percent in 1984 to 1.7 percent last year despite near-record sales, the study by NADA's industry analysis division said. It blamed a glut of vehicles and new nameplates entering the market for the decline.

As sales slow in 1989, most franchises will lose money, some for the first time ever, the NADA report said.

But Dan McClory, managing director of the Auto Equities Group, an auto dealership investment consultant firm in Newport Beach, Calif., said, "As with any average, you have to take the (NADA profit margin) figures with a grain of salt. The good dealership operators will continue to make money even though the margins have shrunk."

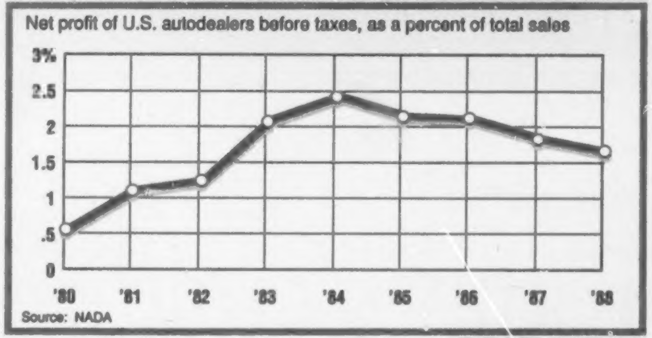
Dealerships, he said, will have to focus on the long term, building the less cyclical sources of profit such as service and used-car sales, while maintaining their current organization through the downturn.

"For example, the Ford, Chevy, Toyota and Nissan dealers may have been selling 1½ used cars for every new car," he said. "Honda dealers may have sold one used car for every three or four new cars. They'll have to learn to sell used cars."

Profits have declined in all areas of dealerships except the parts department, the NADA report said. Fewer than half of all dealerships made money on sales of vehicles in 1988, according to the report. Rebates and incentives have depressed margins on new cars to an average of 7.76 percent per unit. All the domestic franchises in the study lost money in the service department, while all the imports except Mazda made money.

John Fitzgerald Jr., president of the Fitzgerald Automotive Team, with Dodge, Oldsmobile, Buick and European import dealerships in the Washington metropolitan area, said, "Dealer profit has declined because there are more dealers, more manufacturers and the market is not any bigger. . . . Manufacturers are concerned with their cost to build cars and if they build more cars, it costs them less, so dealers have to carry more inventory."

Dealer profit margins



Net profit of U.S. autodealers before taxes, as a percent of total sales

Source: NADA

AUTOMOTIVE NEWS / CHARLOTTE WINTER

The larger inventories force the dealer to spend more on advertising and personnel, and the problem, said Fitzgerald, is exacerbated by manufacturers transferring more of their costs to the dealers.

"Dealers will have to become more expert in controlling their inventories," Fitzgerald said. "Even in 1929, some stockbrokers made money."

Jim Everett, senior associate for Jack Hamel and Associates, an auto dealership brokerage based in Sarasota, Fla., also noted that bigger dealerships were "buying all the franchises in sight" from 1985 through 1987 and paying top dollar for them. Now that there is a slowdown in the industry, dealers will have to work harder to sell cars and are finding they need stronger management, he said.

"This is a good shakeout period," Everett said. "The groups that are not put together well will be shaken out. The numbers guys, those dealerships that are well managed, will do just fine, thank you. They may have a $500,000 year rather than a million, but they'll do OK. Some of the mom and pops will do well, some won't."

Speedy $72,800 Jaguar slated for sale in U.S.

By Daniel Ward
STAFF CORRESPONDENT

LONDON — High-performance JaguarSport versions of Jaguar production models will be introduced in the United States by mid-1990. Emissions work is in progress on the 317-horsepower XJR-S 6-liter that bowed last week in the United Kingdom.

A $72,800 price tag and 158-mph top speed make the new model the most expensive and fastest Jaguar available.

Tom Walkinshaw, who heads Jaguar's worldwide racing effort and the JaguarSport unit developing the street cars, said, "The new XJR-S puts us very much on the pace with competition such as Porsche and Ferrari. We are setting our sights now on further improvements within the product range as well as developing overseas sales networks in key markets, having successfully established our franchise in the U.K."

Jaguar Chairman Sir John Egan predicted that JaguarSport cars could eventually account for 10 percent of Jaguar sales.

In the first 12 months of operation in Britain, JaguarSport sold 550 cars through 24 dealers.

Before the introduction of the 6-liter model, JaguarSport packages consisted only of improved steering, suspension, wheels, tires and aerodynamic features. With the new car, JaguarSport's sales and marketing director Bill Donnelly said he believes the firm has a competitive rival to the Porsche 928-S4 and Mercedes 560SEC. Only the SEC is marginally faster.

JaguarSport's XJR-S draws 158 mph from its 317-hp 6-liter V-12 engine.

No decision has been made on how many of the 142 U.S. Jaguar dealers will be offered the JaguarSport franchise. "We may have to offer JaguarSport to all our U.S. dealers for legal reasons," Egan said.

GE Capital Corp. promotes president of auction unit

AUCTION BRIEFS

CHARLES THOMAS

GE Capital Auto Auctions, which has grown to 18 locations since 1985, is losing President Mike S. Zafirovski who has been promoted to senior vice president, marketing and business development for GE Capital Fleet Services.

"Over the past four years, Mike successfully started GE Capital Auto Auctions' business," said James W. Rogers, president of GE Capital Fleet Services.

"The fleet services market is becoming increasingly competitive and Mike's extensive background in auto financial services and acquisitions brings the set of skills that will compliment our team and our strategy for growth," he added.

Edward D. Stewart, vice president and general manager of GE Capital Auto Financial Services, will act as president of the auction unit, based in Barrington, Ill., until a replacement is named.

GE Capital Corp., a financial services titan, is a major player in the fleet and lease industry.

Building and acquiring auto auctions provided it with a means to remarket hundreds of thousands of its own vehicles in addition to cars and trucks from dealers and other institutions.

Ford Motor Co. purchased 20 percent of GE Capital Auto Auctions shortly after it was formed for an undisclosed amount. This gave GE a flow of vehicles from Ford Motor Co., Ford Motor Credit and Hertz Corp., in which Ford has a stake.

GE expects sales of 760,000 vehicles, up 7 percent over last year, on registrations of 1.3 million vehicles.

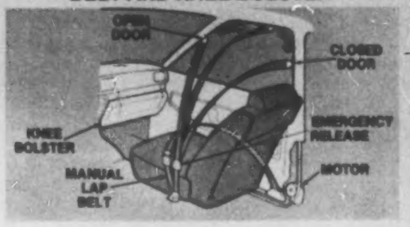
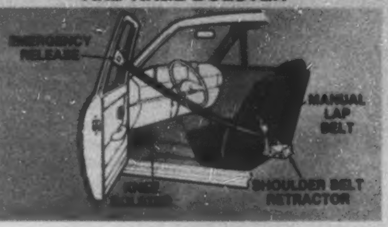
DRIVER SIDE AIRBAG



MOTORIZED SHOULDER BELT AND KNEE BOLSTER



NON-MOTORIZED SHOULDER BELT AND KNEE BOLSTER

How makers meet standard

Manufacturers have taken three approaches to meeting the passive-restraint rule: an air bag system (far left); a motorized belt approach (center); and a two-point non-motorized belt. All three systems require that a manual lap belt be used except for a three-point non-motorized belt (not pictured), which attaches the lap portion to the door.

BAGS

FROM PAGE 1

rent car standard.

NHTSA is likely to mandate passive restraints for light trucks, minivans and multipurpose vehicles beginning in the 1993 model year. The safety agency is also launching studies to determine whether some automatic seat belt systems are inferior.

None of the concerns, or the new wave of passive restraint regulation, is likely to become an issue until the early 1990s. NHTSA is giving automakers time to adjust to the current requirements and does not want to not hinder the voluntary move toward air bags, said Jeffrey Miller, acting NHTSA administrator.

Beefing up passive restraint requirements could also take a back seat to new technical requirements manufacturers may face from pending clean air legislation, according to Philip W. Haseltine, executive director of the American Coalition for Traffic Safety, an auto industry-backed safety group.

As of Sept. 1, all 1990 passenger cars must be equipped with some sort of passive protection, capping a four-year phase-in that began in 1987 with 10 percent of the fleet. That percentage was increased to 25 percent in 1988 and 40 percent in the 1989 model year.

The number of passenger cars with driver-side air bags has increased from 3,175 vehicles — all Mercedes-Benz models — in 1984 to an anticipated 2.9 million in the 1990 model year.

To accelerate air bag installation, NHTSA has given automakers a four-year reprieve from full frontal passive protection if a driver-side only air bag is used. Until 1994, vehicles with driver-side air bags will be allowed to use manual three-point belts on the passenger side.

NHTSA estimates that by 1993 between 5 million and 6 million vehicles will have air bags.

Although safety activists would have liked to see mandatory air bags, they too, are satisfied with the progress of the passive restraint program.

"I've been waiting for this day for 20 years," said Joan Claybrook, a former NHTSA administrator and a leading consumer advocate who sued the government several times on the issue of passive restraints.

"We've come to the conclusion that air bags and shoulder belts together work best. But we've come down a long road to allowing choice. And because of the popularity of air bags, everyone will install them in the end."

The safety agency is holding off on issuing a light truck passive restraint requirement. The fear is that the there would be an insufficient supply of air bags and that such a rule would squeeze manufacturers' resources to the point of hurting the program.

"It made sense to put passive restraints on passenger cars first - they are the most vulnerable vehicles and that's where the overwhelming majority of death and serious injury occur," Miller said. "We want to make sure we don't interfere with passenger cars."

In fact, NHTSA anticipates automakers will begin to voluntarily move toward truck passive restraints before a new requirement is issued.

But by the time NHTSA is ready to issue a light truck passive restraint requirement, research and studies may have tainted the agency's view on various belt systems. By 1993, NHTSA may be prepared to tell manufacturers what kind of belts they cannot use — a decision consumer advocates are pressing the agency to make.

But, NHTSA has responded to a petition by Insurance Institute for Highway Safety saying it will evaluate the usage rates and effectiveness of detachable versus non-detachable automatic belt systems and for the various types of motorized and non-motorized systems.

The group, in a survey of 179 dealer showrooms in the Washington, D.C. area, found only 12 of the 276 cars on display with the detachable passive belts connected. Dealers are required to show the cars with the passive belts in place. NHTSA said it will continue to investigate dealers on a case-by-case basis to determine if they are complying with the law.

In a 1987 study of cars in four metropolitan areas, the Insurance Institute also observed the usage rate for detachable non-motorized automatic belts systems to range from 46 to 64 percent and the usage rate for detachable motorized belts to be 88 percent. The use rate for vehicles with non-detachable automatic belts ranged from 87 to 96 percent.

NHTSA will have to wait for enough crash data from passive restraint-equipped cars to be generated over two to three years before it can make a decision.

"If we saw that one system was worse then the others, sure we would want to take some action to weed that system out of the population," Miller said.

Consumer groups argue there is enough data for NHTSA to ban some belts. But there is no consensus among the advocates on which belts to eliminate.

The controversy stems from the way the passive restraint law was written. NHTSA calls it a performance standards, because automaker are not told which system to use. If instrumented crash dummies "survive" a 30 mile-per-hour crash test, the system passes and can be used. To date, none of the systems has failed, NHTSA said. During the test, NHTSA does not fasten lap belts on passive systems where only the shoulder belt is automatic.

The non-motorized three-point belt used by General Motors is the most controversial.

The belt is anchored to the door and straps in the front seat occupants when the door is closed.

Critics of the system say it is difficult to get in and out of the cars with the belt attached and as a result most owners will use the system's detachable feature, defeating the purpose of passive protection.

GM says the three-point is more effective in a crash since it offers more protection than a two-point system when the driver fails to fasten the lap-belt portion.

Miller said the question is still "what is the trade off - we're going to have to look at the data to see how often do people with two-point belts use their auxiliary belt, and how big a differential in effectiveness and usage is there."

As for the possibility of air bags becoming mandatory, NHTSA has no plans to amend the rule to mandate the use of the device.

The original mandatory passive restraint rule was passed in 1978 by the Carter Administration.

The rule was rescinded by the Reagan Administration in 1981, a move that was immediately challenged in court by a coalition of consumer groups.

Two years later, the Supreme Court ruled 9-0 in 1983 in favor of the consumer groups and NHTSA was forced to rewrite the passive restraint rule.

"That was the only way the rule got passed during the Reagan administration," said Haseltine, who was deputy assistant secretary for policy in the transportation department under former Transportation Secretary Elizabeth Dole.

Haseltine said he and a small group of seven or eight developed a the current "compromise" rule that would satisfy the White House and "put 15 years of debate behind us."

The revised rule with its phase-in provisions went into effect on July 1, 1984. But it had an escape clause. If belt laws covering two-thirds of the population were adopted, the passive restraint rule mandating only automatic belts, could be repealed on April 1, 1989 by the secretary of transportation.

The Big Three and American Honda formed an organization to lobby for belt use laws called Traffic Safety Now — the predecessor to the American Coalition for Traffic Safety.

Consumer advocates criticized the decision and accused Dole of bowing to political pressure because air bags were not included.

But Miller said he believed the "the decision turned out to be better than people may have expected because we have not only passive restraints but lots of belts laws and belt use."

To date, the air bag systems deployed have been reliable. But, manufacturers worry that liability suits will increase if drivers of vehicles with air bags do not wear their seat belts, Haseltine said.

In a fatal crash, the occupant of a car with an air bag and a three-point belt has a 45 to 55 percent of survive and a 40 to 50 percent chance with an air bag and a lap belt. But the chances if survival with an air bag alone drop to between 20 and 40 percent — lower than the 40 to 50 percent protection afforded by just a three-point manual belt, according to NHTSA studies.

High court asked to review no-passive restraint suit

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — A second lawsuit alleging that a car is defective because it was not equipped with passive restraints has been appealed to the U.S. Supreme Court.

If that appeal or another filed last month is accepted, it would be the first high court review of the issue.

The court is expected to consider both petitions when it reconvenes in October.

Pauline W. Kitts, who sued General Motors on behalf of her husband, Willard, who was killed in a 1982 accident, claims the automaker did not use available technology that would have enabled him to survive. A lower court held GM was not guilty of building a "defective and unreasonably dangerous" 1982 Pontiac J2000. Kitts was killed in a single-car accident while wearing a seat belt.

The decision is similar to a 1st Circuit opinion last month that is being challenged by Trial Lawyers for Public Justice. That case, Wood vs. GM, involves a plantiff injured in a multipurpose vehicle while not wearing a seat belt.

In their petition, the trial lawyers also question whether mere compliance with the minimum requirements of any performance safety standard shields a manufacturer from liability in damage suits.

In the Kitts case, a New Mexico District Court held that the federal safety law pre-empted a common law claim. On appeal, the 10th Circuit Court joined the Kitts case with a similar one — Richart vs. Ford — and threw out both of them on grounds of federal preemption.

Friend-of-the-court briefs were filed by the Product Liability Advisory Council, the Automobile Importers of America and the Motor Vehicle Manufacturers Association. All argued for federal preemption, while the Trial Lawyers for Public Justice and the Association of Trial Lawyers of America filed briefs arguing against preemption.

The government filed a supplemental brief with the Supreme Court, contending that the safety law would not pre-empt state common law "except in certain limited situations not applicable to the Kitts case." When the 10th Circuit Court ruled on the Kitts case, it relied wholly on the Wood case in the 1st Circuit.

An argument made in the Kitts case is that Congress alone has the constitutional power to pre-empt state law and the role of the courts is only to determine and apply congressional intent.

Kitts' lawyers argued that the effect of the 10th Circuit opinion is to "quash an important area of common law development in the states" not limited to alleged auto defects but also applying to "many other areas in which Congress has enacted minimum design standards."

They relied in part on an earlier Supreme Court decision that prohibits "federal judges, independent of the will of Congress, from preempting state common law."

Kitts' attorneys also argued that "uniformity" of safety law was not among Congress' intent in the 1966 safety law. "Nowhere in Congress' own expression of its purposes is uniformity even mentioned, much less identified as a primary purpose," the petition said.

Chrysler says head-impact rule impedes development of air bags

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Federal regulations that require instrument panels to absorb the impact of a passenger's head at low speeds could interfere with the development of some passenger-side air-bag systems.

NHTSA's call for comments on the matter was in response to a Chrysler Motors petition to exclude air-bag-equipped cars from the standard because it feels the rule is redundant in light of the head protection afforded by an air bag.

But NHTSA noted that air bags do not deploy in head-on collisions at speeds below 12 mph, nor do they work in side or rear impacts, but occupants frequently hit the instrument panel in those crashes.

Chrysler said it is attempting to develop a passenger-side air bag mounted on top of the panel, which appears to have a safety advantage over conventional systems when a passenger is leaning forward or the occupant is a child standing on the seat. Most systems used or in development are mounted on the front of the dash. But Chrysler said it can't design a dash-top system and meet the agency's head-impact standards.

The standard evaluates the ability of an instrument panel to absorb the impact of a head-shaped test object moving at 15 mph.

NHTSA is seeking comments in an effort to further air-bag technology.

But NHTSA denied a similar petition from Mitsubishi Motors Corp. because the company failed to argue that the standard hinders development of technology.

NHTSA's comment period is open until Sept. 25.

USED CARS

FROM PAGE 1

Dan Strader, a used-car salesman for Kerr-Neilsen Buick-Jeep-Eagle in Gary, Ind., said the dealership sold twice as many used cars as new cars in July.

He said customers see the price of a new Buick Park Avenue, for example, and then stroll over to the used-car lot and buy a used one.

The reason: A 1989 Park Avenue retails for about $22,000 while a 1988 with 8,000 miles on it retails for $15,500.

Even more astonishing is the upward movement in profits from dealerships' used-car operations.

According to the National Automobile Dealers Association, used-car operations in 1988 accounted for 26 percent of total dealership profits, up from 7 percent in 1985.

Some industry analysts have gone so far as to say the decline in used-car prices could explain the softness in new-car sales this year.

"Used-car prices have been weakening relative to new car prices since 1982," said Jack V. Kirnan, an analyst with Kidder, Peabody & Co.

Kirnan recently completed a study that showed the average price of a used car in 1982 was about 47 percent of the cost of a typical new car. By 1988, that ratio had fallen to about 40 percent.

"Weaker used-car prices hurt trade-in value, requiring the potential buyer to to make a larger down payment," said Kirnan.

Part of the reason for the depressed prices of used cars could be the number of vehicles sold since the economy rebounded in 1983 — about 90 million. Another is the bounty of incentives that persuade consumers to trade.

But according to Kirnan's report, the real hobgoblin has been the surge in fleet sales, causing lower trade-in values for used cars.

According to the U.S. Department of Commerce, fleets now comprise about 36 percent of total cars sold, up from 20 percent in the early 1970s.

Executives of auto auctions say the ratio of cars brought to the auctions by dealers and institutional vehicles is changing.

In 1980, 75 percent were dealer consignment vehicles and 25 percent were institutional vehicles — meaning manufacturer, fleet and lease and others.

By 1985, institutional vehicles had edged up to 30 percent and dealer consignments had fallen to 70 percent.

Looking ahead, industry officials expect that by 1992, more institutional vehicles than dealer consignment vehicles will arrive at auto auctions.

Fueling that swing in the market has been the number of buyback cars — vehicles sold to daily car rental companies, then repurchased by the manufacturer and remarketed at auctions. Automakers expect to remarket about 750,000 of them this year.

ccording to NADA, vehicles two years old or less accounted for 23 percent of new-car dealers' used-car sales in 1988, up from 16 percent in 1982.

Retail lease vehicles also have added to the torrent of used cars.

Cars leased for personal use have jumped from an estimated 293,000 in 1983 to more than a million this year. They eventually will spill back into the used-car market.

Michael J. Richardson, president and chief executive officer of Nashville-based Anglo American Auto Auctions, said lease portfolios from the middle of the decade already are starting to mature.

"We have a potential customer — a bank — that returned fewer than 1,000 lease vehicles in 1985," he said. "This year, we are looking at 80,000."

Banks and other financial institutions are smarting from hefty losses on the residual values of retail leases now coming to term.

When they made the lease agreements, they set residual values high to keep customer payments low. But the vehicles are not bringing the prices they had predicted when the cars were leased.

A spokesman for National Bank of Detroit said some retail lease vehicles are bringing $1,300 to $1,500 less than expected at term.

Joel Pitcoff, research analysis manager at Ford Motor Co., disputed findings that used-car prices have affected new-car sales.

He said the softness in new-car sales is due to high interest rates and an uncertain economy.

"There is no oversupply of two- to five-year-old cars," he said. "In fact, there is a scarcity of low-mileage, late-model cars."

Pitcoff also said the likelihood of a used-car salesman snitching a new-car customer is scant.

"The used-car customer is more likely to upgrade to a new car than the customer who normally buys a new car purchasing a used vehicle," he said.

Pitcoff also pooh-poohed findings that the huge number of daily rental cars coming back into the market has driven down used-car prices.

"These vehicles make up only 35 percent of the entire fleet market," he said.

Olds, BMW incentives

Oldsmobile increased its cash rebate on the 1989 Toronado, and BMW announced new consumer financing on its 325i models last week. Details are in Incentive Watch, below.

INCENTIVE WATCH

Sales dip in 'short' period

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Mid-August car and light-truck sales declined almost 9 percent from the comparable 1988 period.

There was one less selling day this year. For Aug. 11-20, deliveries of U.S.-built cars and light trucks totaled 274,320, down 8.77 percent from 300,682 last year.

Although overall sales were down, dealers sold more cars and light trucks per day than they did in 1988. This year's Aug. 11-20 daily selling rate was 34 290, up 2.64 percent over last year's 33,409.

DOMESTIC SALES

CARS	August 11-20, 1989	August 11-20, 1988
Eagle	1,551	1,272
Chrysler	3,345	5,906
Dodge	10,352	10,771
Plymouth	9,242	8,034
Chrysler Motors	24,490	25,985
Ford	36,907	40,852
Mercury	13,989	14,424
Lincoln	4,124	4,908
Ford Motor Co.	55,020	60,184
Buick	15,929	15,536
Cadillac	5,872	6,713
Chevrolet	27,817	31,796
Oldsmobile	14,359	18,784
Pontiac	14,036	15,563
General Motors	78,013	88,394
Honda	9,732	9,256
Mazda	942	1,015
Mitsubishi	906	—
Nissan	3,011	4,182
Toyota	6,300	1,429
U.S. Car Total	178,414	190,445
TRUCKS		
Chrysler	72	0
Dodge	9,212	10,651
Jeep	6,047	6,911
Plymouth	3,531	3,913
Chrysler Motors	18,862	21,475
Ford Motor Co.	30,594	38,552
Chevrolet	33,709	36,306
GMC	8,909	9,658
General Motors	42,618	45,964
Nissan	3,832	4,246
U.S. Truck Total	95,906	110,237
U.S. Car-Truck Total	274,320	300,682

Sales of domestic-built cars dipped 6.32 percent to 178,414 from 190,445 last year.

On a daily basis, car sales rose 5.39 percent to 22,302 from the year-earlier selling rate of 21,161.

Honda and Toyota reported increases in sales of U.S.-built cars. Honda sold 9,732 cars, up 5.14 percent from 9,256 last year. Civic sales jumped to 4,388 from 3,863, while Accord sales were steady at 5,344, compared to 5,393 last year.

Toyota sales rose dramatically because the company now builds two lines of cars in this country. Sales of Corolla and Camry this year totaled 6,300 compared to 1,429 for Corolla alone last year.

Sales of the other six domestic auto producers declined, with Nissan reporting the heaviest loss — 28.00 percent.

Of the Big 3, General Motors reported the largest car-sales dip. Deliveries totaled 78,013, down 11.74 percent from 88,394 in 1988.

Chrysler Motors posted sales of 237 Eagle Talons in mid-August, up from 180 for Aug. 1-10, which was the first sales report for the new sport coupe.

Domestic light-truck sales fell 13.00 percent during mid-August. The total was 95,906, compared to 110,237 last year. The daily selling rate was 11,988, off 2.13 percent from 12,249 in 1988.

All four truckmakers reported lower sales for the period. The largest decline was at Ford where sales of light-duty trucks slipped 20.64 percent to 30,594 from 38,552.

Car, truck production ahead of '88

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

United States car and truck production increased last week over the prior and year-ago weeks as model changeover and vacation shutdowns wound down.

With almost back to normal levels for the new model year, car output totaled 131,462 units last week, 5.56 percent more than the previous week's 125,540 and 4.72 percent more than the year-ago week's 125,606.

So far this year, 4,540,973 cars have been produced, 1.28 percent more than the 4,483,516 completed last year at this point.

Last week's estimated production was split as follows: General Motors, 42.22 percent; Ford Motor Co., 26.69 percent; Chrysler Motors, 14.15 percent; Honda of America Manufacturing, 3.96 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.06 percent; New United Motor Manufacturing Inc., 3.04 percent; Toyota Motor Manufacturing U.S.A., 2.86 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.02 percent; and Diamond-Star Motors, 2.00 percent.

Truckmakers targeted production at 78,204 units last week, 2.01 percent more than the prior week's 76,660 and 2.29 percent more than the year-ago week's 76,455.

Ford's Lorain, Ohio, plant is closed this week due to a shortage of dealer orders for Ford Thunderbird and Mercury Cougar. Ford will idle its Chicago plant Sept. 1 until Sept. 11 due to slow sales of its 1989 Taurus and Sable.

Chrysler's Toledo, Ohio, plant shut down last week to adjust high inventories. Output of the Cherokee, Grand Wagoneer, Wagoneer and Comanche is expected to resume Sept. 5.

As previously reported, GM closed its Moraine, Ohio; Shreveport, La.; and Pontiac West, Pontiac, Mich., plants because of bloated inventories today. All three plants are expected to resume operations Sept. 5.

GM's Allante line at the Detroit-Hamtramck plant remains idle until Sept. 6 for model changeover.

Canada car output rises

Last week's scheduled Canadian auto output was 19,733 cars, 11.76 percent percent above the prior week's 17,656 and 6.53 percent more than the year-ago week's 18,523.

So far this year, 631,055 cars have been built, 10.93 percent below the 708,518 completed last year at this point.

Truckmakers estimated assembly of 19,911 units last week was 17.15 percent higher than the prior week's 16,996 and 11.39 percent above the year-ago week's 17,875.

Navistar International's plant in Chatham, Ontario, was expected to resume production today. The plant had been idle due to slow sales.

Volvo's Halifax, Nova Scotia, plant reopened last week after a three-week vacation.

Chevy group fights GMAC turndowns

Dallas dealers try outside audit

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Chevrolet dealers in Dallas have hired an independent firm to investigate the loan practices of General Motors Acceptance Corp., which dealers claim are too restrictive and are costing them sales.

Karl Singer & Associates, a national finance consulting firm in Dallas, will track every loan request made by the Dallas dealers and will examine GMAC's response to those requests for an undetermined time period.

The firm will pay particular attention to GMAC's controversial first-time buyer program and tiered-finance program. In the latter program, the best credit risks receive the most attractive loan rates, and the less credit-worthy are charged the highest rates.

"We, like many GM dealers in the country, think that GMAC's buying practices are hurting our business," said Mike Doran, of Doran Chevrolet. Doran is president of the Dallas Area Chevrolet Dealers Association.

Restrictive loan practices have contributed to the decline of Chevrolet volume in Dallas and across the country, he said.

GMAC had no comment on the Dallas dealers' action.

But in a letter to dealers in May, John Edman, GMAC chairman, acknowledged dealer complaints — particularly about the tiered program. In the letter he said GMAC must maintain a spotless record of profitability or its access to funds loaned to dealers and car buyers would be cut off.

Doran said the association has met with GMAC officials and written letters in an effort to get GMAC to change its policies. The association hired Karl Singer and Associates to come up with the scientific data to support the claims it has made against GMAC.

GM dealers — not only in Dallas — have complained that the first-time buyer program is too restrictive and doesn't provide for low enough monthly payments for the first-time buyer.

"The first-time buyer program has been a failure," said Doran. "The customer has to be gold plated before GMAC will agree to finance his purchase."

Doran said one Dallas dealer turned in 30 applications under the first-time buyer program in July and all were turned down.

HIDDEN IMAGE PHOTOS

Spy photos capture General Motors' Saturn prototypes in close-to-production form. Above, the two-door sporty model has a longer nose and concealed headlamps, compared to the sedan version parked next to it. Below, rear wraparound glass gives the sedan a distinct look.

Engineers, designers mixed in early Saturn appraisals

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Cars that roll off the Saturn assembly line next summer may bear a strong resemblance to the Ford Probe and Pontiac Bonneville already available in dealer showrooms.

That's according to automobile engineers and designers who were asked to analyze the style and design of two- and four-door Saturn models as they appear in photographs obtained by Automotive News.

Several soon-to-be Saturn dealers praised the styling as a hit.

Some independent designers said the new Saturn coupe, with its low-front, high-back, rounded body, its thin, all black pillars, and its wrap-around glass is a dead ringer for the Ford Probe. Some said the four-door model resembles the Pontiac Bonneville.

"That (the two-door model) definitely looks like a Probe," said Scott Johcox, a senior designer at Technical Services, an automobile design house, in Troy, Mich. "The four-door, minus the door handle, looks like the Bonneville."

Gary Krolewski, another senior designer at Technical Services, agreed and added that he hopes the car is not "spoiled" by a small engine.

"I'm impressed; it has nice lines," he said. "The least it should have is a V-6 fuel-injected engine."

Caesar Gonzalas, a senior designer at Technical Services who briefly worked on the Saturn project a few years ago, said he likes the rounded look of Saturn's quarter panel.

Carl Olson, chairman of Transportation Design at the Center for Creative Studies, an art college in Detroit, said the Saturn coupe is "immediately recognizable as a General Motors car" and has sev-

Porsche cuts back; trims imports, staff

Only 8,970 cars set for U.S. in '90

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

Porsche Cars North America, anticipating a further sales slide, will reorganize the way it sells and distributes cars and parts in the United States.

As part of that reorganization, Porsche last week fired 50 people from all levels of its U.S. operations — from directors to clerical help.

And next year dealers will find themselves selling even lower-volume, higher-priced niche cars whether they like it or not.

A two-page letter sent by Porsche Cars North America to dealers on Aug. 23 told dealers that they will have a total of 8,970 1990-model cars to sell. Some dealers predict that number may be even lower.

In total, Porsche says it will have 11,320 cars for the 1990 calendar year, including 1989 carryover vehicles.

"As you are aware from past experiences our planned production is always subject to variances," wrote Porsche Cars North America President and Chief Executive Officer Brian Bowler to dealers.

"In our opinion, in this model year any revisions to the production plan can only be downward."

Porsche says it will sell 12,000 cars in the United States in 1989. If 1989 sales continue at the current pace, Porsche will sell just 9,552 cars this year. Through July 31 Porsche Cars North America had retail deliveries of 5,722 cars for a 796 car-per-month average, a 39 percent decrease from 1988. That 1989 average does not take into account any new-model start-up delays, including 944 Cabriolet and 911 Carrera 2s. This week, Porsche Cars North America will release August sales results and Porsche AG will release 1988 financial results.

Porsche has suffered serious sales losses since its high mark of 30,471 in 1986. Sales declined to 23,632 in 1987 and 15,737 in 1988.

Porsche Cars North America officials said that 1990 calendar production for worldwide sales would remain flat or increase slightly depending on market conditions, and would tally from 32,000 to 34,000.

Porsche officials said the company implemented the reorganization to reduce costs by eliminating duplication of vehicle and parts

Frankfurt show to spotlight new BMW, Accord

BMW's 300-hp 850i, one of the Frankfurt International Motor Show's stars.

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Next week's opening of the Frankfurt International Motor Show will be dominated by a series of flashy sport coupes and purebred sports cars from European makers, while one Japanese maker will be unveiling the next generation of its most important product.

Headliners at the semi-annual German exhibition include BMW's V-12-powered 850i coupe, the new Ferrari 348, Opel's Calibra that marks another European entrant in the Japanese-ruled coupe segment and Porsche's rear-wheel-drive 911 Carrera 2.

Porsche is also readying a potentially explosive design study for

Engineering replaces pretty cars in Chrysler TV ads

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — In its 1990-model advertising, Chrysler Motors shuns the traditional hallmarks of television car campaigns — strong music and speeding cars on scenic highways.

Techniques used in Chrysler's new television ads include humor, wit and recital of engineering and product details. More often than not, vehicles don't move.

Chrysler will no longer use spokesman Ricardo Montalban, who made "rich, Corinthian leather" part of the nation's vocabulary.

Joseph Campana, vice president of Chrysler-Plymouth, said "Ricardo has been a great friend for 15 years, but the (1990) advertising doesn't lend itself to a spokesman."

Instead, the Chrysler brand campaign focuses on the company's engineering heritage and employs a new theme: "There is no luxury without engineering."

But two celebrity spokesmen will be seen in other campaigns. Chrysler Corp. Chairman Lee Iacocca appears in corporate ads touting the company's customer satisfaction rating. And Tina Turner speaks — but does not sing — for Plymouth.

Dodge has employed another big name, but not on camera.

The Dodge commercials are directed by Joe Pytka, whose credits include the Madonna Pepsi commercials, Bo Jackson Nike commercials, Michael Jackson music videos and the feature film "Let It Ride," starring Richard Dreyfuss.

Chrysler declined to specify how much it will spend on advertising. Advertising Age, a sister trade publication to Automotive News, estimates 1989 spending at $500 million.

Campana said 70 percent of the Chrysler brand's 1990 advertising budget will be spent for print campaigns. Traditionally, the brand has spent about 40 percent of its budget on print.

Chrysler said print dominates the buy because the company believes luxury-car prospects don't watch as much television as the average buyer.

Ninety percent of Plymouth's spending will be television as the company strives to increase brand awareness, Campana said.

John Damoose, vice president of Dodge, said Dodge will spend an estimated 35 percent of its advertising budget in print this year compared to 20-25 percent last year.

Seventy percent of spending for the Jeep and Eagle brands will be in television, according to Joseph Cappy, vice president of Jeep-Eagle.

Chrysler Corp. previewed its advertising campaigns last week.

CHRYSLER: The company's flagship division is unveiling two luxury models, the Imperial and New Yorker Fifth Avenue, in the 1990 model year. Advertising will stress engineering technology and position the cars in the luxury market.

Chrysler combed its corporate archives and found television footage of a 1934 Chrysler Airflow somersaulting off a cliff, landing solidly on a road and continuing its journey. Walter P. Chrysler's original tool box also appears in the ad, underscoring the company's tech-

With GM Building in the background, Tonkin delivers blast at automakers.

Tonkin tells makers, 'Help us, we help you'

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

The National Automobile Dealers Association could withhold its lobbying clout on issues crucial to automakers unless the manufacturers make concessions on fleet subsidies and other practices that reduce dealership profits, NADA President Ron Tonkin warned last week.

"We have some bargaining chips," Tonkin said at a press briefing in Detroit. "We want to know what the trade-off is. If they want help from us on their problems, then we want help from them with ours."

Tonkin's threat comes as the auto industry faces several dramatic new initiatives in Washington: potentially stricter emissions standards, safety regulations and corporate average fuel economy standards.

Tonkin is winding down a whistle-stop tour of 17 major American cities. He is talking to dealers and the news media about the plight of automobile dealers and what he says are the injustices automakers perpetrate against them.

Profits have dipped significantly for auto dealerships in recent months, according to Tonkin, who says half the dealers are either losing money or breaking even.

Since he became NADA's outspoken and controversial chief last February, Tonkin has centered his crusade against automakers on manufacturers' subsidies to fleet buyers. He wants franchised dealers to get the automakers' lowest price.

He has also complained about reductions in payments on warranty work and the 1 percent mandatory dealer advertising fee

Electronic safety options thrive

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Sales of safety devices and electronic doodads targeted at driver comfort are booming, driven by consumer demand and legislation. For automakers, that means higher profits.

William R. Pochiluk, president of Autofacts Inc. in Paoli, Pa., estimates the automotive electronics market represents a retail value of $8.7 billion this year and will grow to $13.8 billion in five years.

The research firm has just finished an 18-month study on the outlook for automotive electronic systems. It gathers its data from automakers and their suppliers.

According to the study, growth in electronic options has been kindled in part by sales incentives, which have increased option loading and reduced prices.

"The growth of OEM earnings despite continuous incentives for the 1986-88 model years reflected higher option loading with higher profit output," said Pochiluk.

Other influences have been:

- Competition, which has expanded option availability and reduced prices.
- New automotive electronic products and product-cost improvements, which have hiked demand.
- Car buyers have asked for the same creature comforts when they purchase trucks.
- More consumer purchasing power.
- Demand for electronic features moves in one direction — up.

According to the study, Ford Motor Co. is expected to be a leader in headlamp timing, keyless locks, power door locks, power seats and trip computers. Ford will be strong in anti-lock brakes, cruise control and intermittent wipers for trucks.

General Motors is expected to have an edge in automatic air conditioning, anti-lock brakes, anti-theft devices, cruise control, load levelers and power windows for cars and power windows for trucks.

Although Chrysler Motors is expected to lag behind its domestic competitors, it will lead in air-bag sales and intermittent wipers for cars. It is likely to sell more power door locks, rear window defrosters and rear-window wipers on its

GM to name Smith successor next spring

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors directors will begin the process of choosing Chairman Roger B. Smith's successor at their October meeting and will announce their selection by late spring.

Smith, who retires in July when he reaches 65, told investment analysts last week that his successor will be named a couple months before he leaves.

Those who attended GM's annual meeting for analysts at its Milford, Mich., proving grounds last week said that most GM officials were in favor of having the financial side and the engineering side represented in the company's top two spots.

In recent history, the chairman generally has risen through the financial ranks while the president generally has been an engineer.

Frontrunners for the chairmanship are President Robert Stempel and Executive Vice President F. Alan Smith. Outside possibilities include Executive Vice Presidents William Hoglund, Lloyd Reuss, Robert O'Connell and John Smith.

GM executives also said the automaker believes it could maintain its present dividend even during an economic downturn. The quarterly common stock dividend is currently 75 cents a share.

Portfolio managers were concerned about GM's ability to maintain the dividend.

GM executives showed analysts that even if car and truck sales fell to 12.5 million units annually from this year's expected 15 million, GM could sustain its present dividend.

Analysts attribute an upturn in GM's stock price to the optimism expressed at the Tuesday meeting. In a market that was flat Thursday, GM's stock rose $1.63, to $48.75, and was among the most actively traded issues. The auto stocks as a group were the most actively traded, led by GM.

Scott Merlis, auto analyst with Morgan Stanley, said the upward movement of GM's stock Thursday increased the automaker's value

Analyst sees Japan taking 7 points of Big 3 market by '94

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Powered by a surge of North American production, Japanese automakers will wrest almost seven points of market share from the U.S. Big 3 by 1994, a J.D. Power analyst predicts.

Japanese car nameplates will take 29.8 percent of the U.S. market in 1994, up from 22.9 percent in 1988, said Christopher Cedergren, senior analyst for J.D. Power and Associates, an Agoura Hills, Calif., market research firm.

In the process, the combined shares of Ford Motor Co., Chrysler Motors and General Motors will shrink to 62.5 percent from 69.2 percent in 1988, he said. The Big 3 figure includes captive imports.

MARKET-SHARE PREDICTIONS, 1994
(Percentage of U.S. car sales)

	1994 Predictions	1988 Share
General Motors	32.7	36.2
Ford Motor Co.	20.4	21.8
Chrysler Motors	9.4	11.2
Big 3 Total	62.5	69.2
Honda	9.1	7.3
Toyota	7.6	6.2
Nissan	6.1	4.4
Mazda	2.9	2.4
Mitsubishi	1.6	0.6
Subaru	1.4	1.6
Isuzu-Suzuki-Daihatsu	1.1	0.4
Japanese Total	29.8	22.9
Hyundai	3.0	2.5
European makes	4.7	5.4
Totals	100.0	100.0

SOURCE: J.D. Power and Associates

Domestic automakers are much more competitive today than they were a decade ago, Cedergren told a meeting of West Coast automotive writers.

But the Japanese are emerging from a "yen-shock era" with their manufacturing costs down and their productivity up. They are preparing to challenge domestics in several new segments, he said.

Cedergren, who prepares private forecasts of future product offerings and sales volume for Power's manufacturing clients, sees GM as the biggest loser among the Big 3.

GM's share of the U.S. car market will slip 3.5 percentage points to 32.7 percent by 1994, compared with 36.2 percent in 1988, he predicted. He expects Ford to shed 1.4 points from last year's 21.8 percent and Chrysler to lose 1.8 points and drop from 11.2 percent to 9.4 percent.

The blow to the Big 3 will be softened somewhat because overall car sales will be higher. Cedergren predicted U.S. car sales will reach 11.17 million units in 1994, compared to 10.53 million in 1988.

Big 3 volume will drop about 300,000 units, to 6.98 million; but for Japanese nameplates as a whole, a larger market will translate into more than 900,000 additional car sales: 3.32 million in 1994 compared to 2.4 million in 1988, Cedergren said.

He sees all Japanese makes except Subaru gaining market share, and he looks for an increase by Hyundai and a dip for the European makes (see accompanying table).

He said Japanese automakers are even tougher than before and more firmly entrenched in the U.S. market with North American production capabilities. Asian automakers now build cars at 11 operations in the United States and Canada.

Cedergren said Big 3 manufacturers have improved quality and reliability; introduced more contemporary, world-class styling; increased distinction between product lines; cut reaction time to emerging trends; become better attuned to customer needs; and improved value-for-the-money ratios.

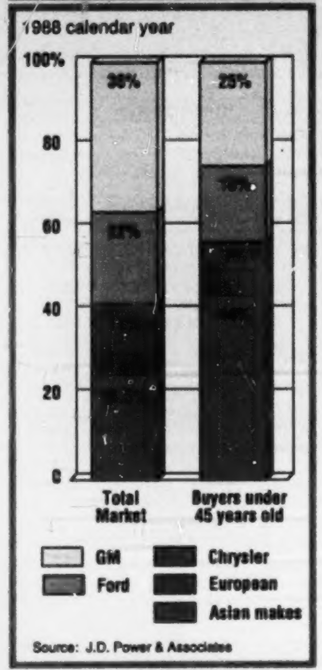
"But the Japanese are a moving target," he said. "They were slowed by the yen-shock era (the appreciation of the yen against the dollar from late 1985 to 1987, which pushed U.S. prices of Japanese vehicles sharply higher), but they have emerged from it with greatly improved productivity and production costs."

Between 1986 and 1989, Japanese automakers increased productivity 45 percent and reduced cost structures 25 percent, he said.

While the exchange rate has stabilized around 140 yen to the dollar compared to 240 yen per dollar in 1985, Japanese manufacturers had prepared for a greater challenge.

"The new break-even point for vehicle exports is 105 yen per dollar and for transplants 95 yen per dollar," Cedergren said.

Share of new car market



Source: J.D. Power & Associates

AUTOMOTIVE NEWS / CHARLOTTE WINTER

He said new Japanese cars are being designed and engineered with lower cost bases. His figures show break-even points are targeted at 110 yen per dollar for the 1990 Nissan 300ZX and Mazda Miata, 100 yen per dollar for the 1990 Honda Accord and 95 yen per dollar for the 1991 Toyota Camry and 1992 Honda City.

Other Japanese strategies for the U.S. market will be challenging for the Big 3, he said. They include:

- Bigger cars loaded with more features. Between 1981 and this fall's new 1990 model, the Honda Accord has grown by a foot, from 172 to 184 inches, and its engine has gone from 1.8 liters to a 2.2-liter 16-valve version.
- Increased distribution. Japanese makes intend to add almost 2,000 new dealer points during the next four years, mostly in the Central and Southeastern United States.
- Expansion into the fleet market.
- Riding the crest of the postwar generation. Big 3 automakers are losing the battle for the hearts and pocketbooks of baby boomers, Cedergren said.

In 1988, Asian and European makes captured three out of 10 car buyers for the whole market, but half the buyers were under 45 years old, Cedergren said. Put another way, GM outsold all imports combined, but import makes sold twice as many cars as GM in the under-45 age group.

- Targeting new territory. Japanese automakers are entering — or considering entering — new segments, including what Power designates the upper-middle and luxury range, mid-priced sports coupes and sedans as well as the intermediate pickup category.

Auto trade deficit up 10%; imports rise, exports drop

WASHINGTON — The U.S. trade deficit for passenger cars and light trucks increased 10.1 percent in May, lead by a sharp fall in exports. The annualized automotive trade deficit also rose in May, the first increase since January 1988.

The latest figures from the U.S. Commerce Department show the automotive deficit in May was $3.92 billion compared with a deficit of $3.56 billion in May 1988. The value of exports fell 30.6 percent, while import value increased 1.5 percent.

The annualized U.S. automotive trade deficit increased 0.6 percent to $44.87 billion in May. The deficit for the 12-month period ended May 1988 was $44.62 billion.

Much of the increase in the annualized U.S. automotive trade deficit is attributable to trade between the United States and Canada. In the most recent 12 month-period, exports dropped and imports increased.

Total car and truck imports for May had a value of $4.61 billion, while monthly car and truck exports were valued at $685.0 million.

Passenger-car exports reached 41,337 vehicles in May with an estimated value of $535.5 million. Light-truck exports for the month totaled 13,724 vehicles with an estimated value of $149.5 million.

The value of passenger-car exports rose 16.3 percent to Japan and were up 24.3 percent to nations labeled "others" by the Commerce Department. Exports of passenger cars to Canada were down 44.6 percent for the month.

Total passenger-car imports totaled 352,766 vehicles in May with a value of $3.85 billion. Imports of light trucks totaled 79,829 vehicles for the month with a value of $752.7 million.

Imports of passenger cars from Japan were down a scant 0.3 percent, while imports of Japanese light trucks fell 13 percent for the month.

Imports of cars from Canada were down 4.7 percent, while Canada's truck shipments jumped 52.9 percent.

West German passenger-car imports surged 22.3 percent in May. Mexico sent 32.3 percent more cars to the United States, and British passenger-car imports were up 5.2 percent for the month.

Also posting increases in passenger-car imports were, Italy, which sent 857 cars in May, and nations labeled "others" by the Commerce Department, which sent 2,476 vehicles to the United States for the month.

South Korean imports dropped 53.1 percent for the month to 19,182 passenger cars. Swedish shipments fell 24.6 percent, and France shipped 25.3 percent fewer cars than a year ago. Brazilian imports were down nearly 50 percent to 3,070 passenger cars, and Yugoslavia sent only one car to the United States in May with an estimated value of $4,623.

Doctors earn GM trauma award

DETROIT — General Motors has awarded prizes in its fourth annual Trauma Research Awards competition to four surgical residents whose research will help advance the understanding and treatment of injury and shock.

The awards, totaling $10,000, are part of a series of three annual Trauma Research Awards given by GM.

The honorees are:

Dr. David K. Magnuson, University of Washington Department of Surgery, Seattle, a $3,000 first-place award in the category of basic laboratory research, for research on a specific enzyme, Protein Kinase C, and its role in relation to inflammation.

Dr. Matthew L. Cooper, University of California Medical Center, San Diego, a $2,000 second-place award in basic laboratory research for his study on the use of antimicrobial agent to prevent infection of skin grafts in the care of burn patients.

Dr. Bradley Reeves, University of Mississippi Medical Center, Jackson, Miss., a $2,500 award in a tie for first place in the category of clinical research for a paper on the treatment options of adolescent fractures of the femur.

Dr. Danielle Desloges, Hospital du Sacre-Coeur, Universite de Montreal, a $2,500 award in a tie for first place in clinical research for a paper on the treatment of hip fractures in elderly patients.

ADS

FROM PAGE 3

nological heritage.

Product features such as Chrysler's four-speed automatic transmission, air bags and anti-lock brakes are compared to similar offerings from Jaguar, BMW and Mercedes-Benz.

PLYMOUTH: Company officials concede that the Plymouth brand has a high level of familiarity in the market but that its image needs polishing.

"Today's Plymouth product is far better than Plymouth's image," Campana said.

Advertising will feature Tina Turner and stress Plymouth products as "smart buys."

Plymouth has dropped its 1989 themeline "Satisfy the Customer. Satisfy the Customer. Satisfy the Customer." Instead, 1990 ads close with "From Plymouth. That's right. Plymouth."

In addition, a new signature/themeline will appear for Chrysler-Plymouth dealer advertising.

The themeline is "Chrysler-Plymouth — America's way to go" and uses the visual image of "thumbs up." The signature is designed for long-term use by individual dealers or dealer associations, Campana said.

Television spots end with Iacocca giving thumbs up to America.

DODGE: Chrysler's performance division continues "The New Spirit of Dodge" theme begun in 1989 but employs humor in its television and print campaigns.

A Pytka-directed television spot for Caravan is filled with the frenetic activity of children and uses the song "Kids, what's the matter with kids today." Dodge Caravan will be promoted heavily, and some ads use ownership testimonials. Print ads suggest: "Ask the Mom who owns one," "Ask the dog who vacations in one" and "Ask the guy who just bought his second one."

Dodge will also promote the Spirit, Shadow, Daytona and mid-sized Monaco sedan, which bows at mid-year.

Dodge truck advertising relies on "realism," Damoose said. "What you will see are Dodge trucks in their normal settings."

JEEP: A new themeline "There's only one Jeep" replaces the 1989 theme "Only in a Jeep." Jeep's successful Cherokee sport-utility will receive new competition in 1990 so the advertising stresses product features exclusive to Jeep such as a four-wheel anti-lock brake system and full-time four-wheel drive.

In a follow-up to last year's Clio award-winning campaign built around classic American songs, a 30-second Cherokee spot features a little girl camping out with her family and singing "Twinkle, twinkle little star."

Chrysler ads will focus on product features, such as anti-lock brakes.

EAGLE: The brand will emphasize the new all-wheel-drive Eagle Talon. Sixteen new 15-second television spots, three print spreads, a four-page insert and a special single-page ad feature Talon. Talon has competed in showroom stock car racing and leaders of the two race teams — Tommy Archer and Paul Rossi — appear on camera to stress the car's performance.

CORPORATE CAMPAIGN: Iacocca will be featured in print and television ads. Campaigns in the last quarter of 1989 will stress Chrysler's customer satisfaction ranking.

Leaning against a 1990 Chrysler LeBaron convertible, Iacocca says, "GM is bigger. Ford is richer. But neither of them beats Chrysler when it comes to satisfying the customer."

In the first quarter of 1990, ads will focus on the company's leadership in minivan sales.

The corporate ads begin this week. Brand advertising breaks in October.

TONKIN

FROM PAGE 3

charged by some manufacturers.

In the past, Tonkin has held out the specter of lawsuits and legislation to deal with those issues. He is now touting a more "cordial, sensible but firm" strategy.

"We have loaned our lobbying expertise in the past to the automakers on such issues as CAFE and clean air," he said. "Every time they have asked us for assistance, we have responded with no strings attached."

But in today's factory-dealer partnership, Tonkin said, "One partner is getting fat and going to the bank while the other is starving and going to the poorhouse."

Tonkin criticized dealers who specialize in fleet sales — who make their money by processing paperwork without selling or seeing a vehicle.

But he conceded that if an automaker offered him $9 per vehicle to do the paperwork for 5,000 fleet cars, he would do it.

"We shouldn't subsidize fleets," he emphasized. "But if the factory comes to me and says it wants to deliver 5,000 Chevrolets — and you might not even see the vehicles but will still be paid for the paperwork, you'll never see the cars, you'll never have to touch them, feel them or smell them — hell, I'd be a whore, too."

Tonkin has added to his list of injustices the mandatory 1 percent per vehicle advertising fee dealers are charged by some divisions of General Motors. He says it should be voluntary.

Tonkin has shaken up NADA and the automakers with his city-by-city crusade. Shortly after taking office, he formed the "Rough Riders" — a group of 1,000 dealers within the association who will carry on the crusade after his term ends next winter.

But apart from raising dealer issues with automakers, what has he accomplished in the seven months of his presidency?

Tonkin says he has at least kindled some dialogue with the automakers.

He has even spoken to the members of the Big 3 boards of directors about dealer concerns. He said the response has been positive.

When pressed, he concedes that little real progress has been made on any of his issues.

But he promises that by the end of his term, he will have brought a change in at least one of the issues.

GM

FROM PAGE 3

$1.2 billion, to $29 billion.

Analysts said they were particularly impressed with the broad array of GM products for the 1990 and 1991 model years, which they were able to test-drive at Milford. The products should boost GM's market share, analysts said.

GM executives have said they expect to gain a point of market share in both cars and trucks in the 1990 model year. They also said they expect Chevrolet to gain market share. Ford is beating Chevrolet in both car and truck sales for the third consecutive year.

Sales from Chevrolet's Geo line, predicted to rise from 200,000 this year to 300,000 next year, will give the division a boost, they said.

Smith told analysts a top priority of the company is "to profitably increase North American market share."

At the same time, GM will continue to lower its break-even point in North America, improve its fundamental earning power and maximize shareholder value, he said.

In the 12 months ended June 30, GM achieved a 15.4 percent return on equity, achieving GM's goal of a minimum return of 15 percent by 1990.

GM executives said the automaker will substantially exceed its target of $12.5 billion to $13 billion in annual cost savings by 1990, based on 1986 costs. They didn't specify by how much.

GM executives said two primary strategies — product simplification and improved capacity utilization — should contribute to a further improvement in GM's earning power.

Analysts said that GM executives admitted more plants will be closed to lower the company's break-even point. Analysts have predicted for some time that GM would be forced to close as many as four more assembly plants in the next few years.

GM officials further told analysts the company will replace 90 percent of its products in the next five years. After building new plants and refurbishing most old ones in the past decade, GM has put most of its capital spending money into new product development. It plans to continue spending on product rather than plants in the 1990s.

ZR-1

FROM PAGE 2

lectible as those cars are today because of the volume and design. The most collectible automobiles are those made in quantities of only a few hundred.

Chevrolet's Perkins disputes critics who say GM will produce too many ZR-1s to make it valuable in the future. He points to Chevrolets from the mid-1950s that were built in quantities of 200,000 a year yet are collectible.

In addition, Stauffer noted that the ZR-1, with the exception of wider tires and a slightly different shaped rear, is virtually identical to the standard Corvette that costs half the price.

"To the average man on the street, the car doesn't look any different than the $30,000 Corvette," Stauffer said.

The GM plant in Bowling Green, Ky., began ZR-1 production last week. Charlotte, N.C., businessman Rick Hendrick, who owns and operates 30 auto dealerships including City Chevrolet and fields three Chevrolet teams in NASCAR's Winston Cup competition, took delivery of the first retail ZR-1. Three-time Indianapolis driver Rick Mears received one of the first, a Pennzoil-yellow version. Mears was given the car in recognition of his contributions to Chevrolet motorsports.

DIAMOND

FROM PAGE 6

ments for the people and they will not be laid off," Walter said.

Big 3-UAW contracts allow automakers to lay off production workers for "valid volume declines," and the layoffs usually are based on seniority.

They also provide that workers will continue to receive a portion of their pay for a specific period during the layoff.

In the event of a layoff at Diamond-Star, workers will receive 80 percent of their wages for one year, Walter said.

Diamond-Star employees agreed to most of the Mitsubishi-conceived work rules already in use.

Left in place are such practices as job rotation and regular "production standards" meetings where line speed and quality improvement are addressed.

The contract calls for only three job classifications, compared with 20 to 40 at a typical Big 3 plant. In addition to the production associate and general maintenance associate job classifications, which existed prior to the contract, the plant will add a die maintenance associate class.

Walter said the new class consists of tool and die makers who will have some exemption from general plant production work responsibility.

Negotiators left intact the company's relationship with an outside firm that performs contracted maintenance services around the plant. Several of the transplant automakers have similar arrangements, and UAW officials have voiced concern that the practice might spread to the Big 3.

A controversial class of temporary employees, which exists at Mazda, was not created at Diamond-Star.

Effective immediately, base pay of production associates will increase from $11.71 an hour to $12.79. The rate will reach $15.04 an hour by 1992. General maintenance workers and die maintenance associates will begin at $14.89 an hour and rise to $17.52 an hour by 1992.

The immediate increase was achieved by folding a cost of living allowance into the base pay, Walter said.

Diamond-Star, which began production in summer 1988, builds the Mitsubishi Eclipse/Plymouth Laser/Eagle Talon and the Mitsubishi Mirage/Eagle Summit.

The plant recognized the UAW last December after a majority of eligible workers signed cards calling for a union election.

Nissan officials noted that, rather than laying off workers during a sluggish sales period in 1988, the company used the time to conduct refresher training courses. The officials contended that such commitment would not necessarily be guaranteed under a union contract.

UAW dissidents plan convention

ST. LOUIS — Leaders of the UAW's New Directions caucus will meet here Sept. 9 to plan their first national convention, scheduled for Oct. 21-22.

Support for New Directions, a dissident group within the union, has grown since the UAW convention in June, several New Directions members said.

At the New Directions convention in October the dissidents plan to establish a national structure for a second political party within the UAW and formulate bargaining demands.

At the June convention, delegates defeated New Directions candidates and platforms in what was seen as a sweeping political victory for UAW President Owen Bieber and the administration.

New Directions leader Jerry Tucker, who lost his bid for re-election as UAW Region 5 director at the convention, said he expects about 35 people from Big 3 plants nationwide to attend the Sept. 9 meeting. Supporters said they expect between 500-600 people in October.

Tucker has protested his defeat to the Department of Labor, which is investigating his claim that the UAW illegally influenced the election.

OPTIONS

FROM PAGE 3

light trucks than its competitors.

Transplants will retain a lead in power sunroofs, rear-window defrosters and rear-window wipers.

"GM has been a key player in automotive electronics but because Ford has put so much effort in the truck side, we predict it will edge out GM," Pochiluk said.

The model mix offered by Japanese transplants — usually low-end vehicles — is the reason Pochiluk cites for transplants trailing in sales of comfort/safety features.

The study also categorizes automotive electronics. Air bags, anti-lock brakes, power door locks and power windows are in the rapid-growth category.

Cruise control, headlamp timing, intermittent wipers, power sunroofs, rear-window defrosters and trip computers are in the moderate-growth group. Anti-theft devices, automatic air conditioning, keyless locks, load levelers, power seats and rear window wipers are in the slow-growth category.

Appeals court kills claims on GM diesel resale value

By Helen Kahn
SENIOR CORRESPONDENT

WASHINGTON — A federal appellate court in Richmond, Va., has denied claims for "diminished resale value" to owners of 1981-85 General Motors diesel vehicles that had no engine problems during the warranty period.

But the court sent the case back to the lower court to decide if the owners were entitled to compensation for engine repairs that occurred after their warranties expired.

The ruling has implications for several other major class-action suits charging lost resale value, including a Chicago suit involving unintended acceleration in Audi 5000s and a Washington case involving alleged brake problems on GM X-cars.

The diesel class action was filed in Charleston, S.C., in October, 1986 by Beverly C. Moore Jr., of the Washington-based law firm of Moore and Brown.

It sought unspecified compensatory and punitive damages and charged that the GM 5.7-liter diesel engine was "inherently defective" and needed "extensive and expensive repairs."

Approximately 500,000 GM cars and light trucks were equipped with the engine.

The suit claimed GM's failure to correct the alleged defects violated the Magnuson-Moss Act because it breached the implied warranty of merchantability and because GM had limited the implied warranties to the length of the written warranties.

The unique feature of the suit was the claim for loss of resale value. The Center for Auto Safety estimated the loss may be as high as $3 billion.

The suit was not part of an earlier New York class action involving 1978-80 GM diesel cars that was settled for $22.5 million in 1984, nor was it part of the 1980 Federal Trade Commission complaint involving defective fuel injection pumps on the diesel engine. The FTC action was settled with GM agreeing to submit warranty claims to arbitration administered by the Council of Better Business Bureaus.

But the claim for loss of resale value is a central part of the Audi suit still in litigation in Chicago and a similar action involving early-production 1980 X-cars in U.S. District Court. Both allege that unfavorable publicity caused loss of resale value.

In the South Carolina case, U.S. District Judge Falcon B. Hawkins dismissed the claims of 130 plaintiffs who had engine problems with the GM diesels after the warranty period had expired. He also threw out the claims for lost resale value because of the alleged "poor reputation" of the diesel engine.

The appellate court called the resale value case a "novel" theory and said the plaintiffs cited no specific case where a court "held the implied warranty of merchantability protects against unanticipated losses in resale value."

While Moore argued that one of the ordinary purposes for which a vehicle is used is to be able to resell it in the future, the court disagreed saying the main purpose was to be able to drive the car in a "safe condition" and "substantially free of defects."

But the appellate court said the lower court should not have ruled on the question of the "unconscionability" of GM's action in limiting the implied warranty to the duration of the express warranty merely on the basis of "bare-bones pleadings."

Instead, said the court, the parties must be allowed to develop an "adequate record" and this may involve such procedures as affidavits, interrogatories and depositions.

The lower court, in finding for GM, ignored Moore's additional arguments that diesel engines were supposed to last much longer than gasoline engines and thus the express warranties were "unreasonable" for diesel engines.

The lower court cited an earlier opinion saying that a 12/12 warranty, shorter than either of these, was reasonable. It said the "time/mileage limitation on the warranty which Congress expressly permits would be rendered meaningless" if it agreed to Moore's arguments that plaintiffs need only show that a "manufacturer knew a product would fail after the expiration of the implied warranty in order to recover for unmerchantability."

GM's warranty documents given consumers purported to limit the implied warranty to the same length as the express warranty, which was 24 months/24,000 miles for 1981-82 models and 36 months/50,000 miles for 1983-85 models.

The federal appellate court said the lower court should not have ruled at all until it had allowed more evidence, such as whether buyers of the GM diesel vehicle had any "meaningful choice" in accepting the limits set by GM on their implied warranties.

Sterling adds $5,000 rebate; Toyota Cressida gets $1,500

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Sterling Motor Cars has announced a $5,000 rebate on its 1989 827SL sedan, 827SLi hatchback and the 827SL Limited Edition, plus a $3,500 rebate on the less luxurious 827S. The rebate expires Nov. 30 and there is no dealer participation required.

Meanwhile, Toyota Motor Sales U.S.A. announced a $1,500 incentive on Cressida and Ford Motor Co. boosted its cash rebates and added some truck models to a program which began Aug. 1.

At week's end, General Motors officials considered increasing, even doubling, the cash rebate currently available on Oldsmobiles.

"Nothing is official," one source said at presstime Friday afternoon. "The corporation has not approved it."

Less than two weeks ago, Oldsmobile increased the consumer cash incentive on its 1989 Toronado from $1,500 to $2,500.

Several automakers this week are likely to extend or replace expiring programs.

Sterling President Graham J. Morris said last week the company has sold virtually all its leftover 1988s, so Sterling is placing a heavier emphasis on selling the 1989s before the 1990 launch.

Through July, Sterling's U.S. sales were 3,821, compared to 5,652 for the same period last year.

At the start of the 1989 model year last fall, Sterling was saddled with high inventories of 1988 models, and even some leftover 1987s, so the company launched its 1989 models only last spring.

The new rebates replace all other previous incentive programs and expire Nov. 30.

Toyota announced a $1,500 dealer incentive on its Cressida. The offer begins Sept. 1 and extends through Nov. 2. The current $100 to $2,000 dealer incentive on other Toyota cars and $200 to $2,500 incentive on Toyota trucks expire Sept. 5.

Also, Ford announced revisions to its buyer incentive programs which started Aug. 1. Customer rebates on Ford Festiva L-Plus and LX models have been increased from $600 to 800. Festiva L models remain at $600.

Ford Aerostar cash is increased from $300 to $500; Bronco II cash is increased from $750 to $1,250; Econoline E-150 van (non-conversion) cash is increased from $500 to $750. Econoline E-150 conversion vans remain at $1,000.

Some conventional pickup truck models not previously included in buyer incentive programs have been added. Ford F-150 manual and automatic 4X4 and automatic 4X2 pickup trucks are added with a $500 cash incentive. Ford F-250 manual and automatic 4X4 models are added at $750 cash.

Low-rate financing alternatives will continue for Festiva and Bronco II models at the percentages and periods of 2.9 for 24 months, 6.9 for 36 months, 7.9 for 48 months and 10.9 for 60 months. Truck products other than Bronco II in this program are cash-only. This incentive program runs indefinitely.

PRODUCTION

Downtime cuts build of cars, trucks

By Karen Detkowski
SPECIAL CORRESPONDENT

With several car and truck plants closed due to slow sales and model changeovers, last week's production fell below the previous week's total.

U.S. truckmakers scheduled 72,452 units last week, 10.89 percent below the prior week's 81,307 and 8.92 percent below the year-ago week's 79,546.

Car output was estimated at 121,326 units last week, 7.37 percent below the previous week's 130,980 and 11.29 percent below the year-ago week's 136,771.

So far this year, 4,661,817 cars have been built, 0.93 percent above last year's 4,619,062 at this time.

Companies split last week's estimated production as follows: General Motors, 50.93 percent; Ford Motor Co., 17.32 percent; Chrysler Motors, 13.93 percent; Honda of America Manufacturing, 5.13 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.58 percent; Toyota Motor Manufacturing U.S.A., 2.82 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.25 percent; Diamond-Star Motors, 2.14 percent; and New United Motor Manufacturing Inc., 1.90 percent.

Chrysler's Jefferson Avenue plant in Detroit closed last week for model changeover. The plant, which builds the Dodge Omni and Plymouth Horizon, will resume production Sept. 11.

GM light-duty truck plants in Moraine, Ohio; Shreveport, La; and Pontiac (West), Mich., are expected to resume production tomorrow. They were closed to adjust high inventories.

GM's Allante line at the Detroit-Hamtramck plant returns Wednesday from a two-week break for model changeover. GM's Oldsmobile 88 line in Wentzville, Mo., is expected to resume this week after two weeks of downtime due to a material shortage.

Ford's Lorain, Ohio, plant, which closed for a week due to lack of dealer orders for 1989 Ford Thunderbird and Mercury Cougar models, returns tomorrow.

The Jeep Grand Wagoneer line at Chrysler's Toledo, Ohio, plant resumes output tomorrow after being down two weeks to adjust inventories.

All car and truck assembly plants are closed today for Labor Day.

Car output up 26% in Canada

Last week's scheduled Canadian auto production totaled 19,354, 26.73 percent more than the prior week's 15,272 and 7.44 percent above the year-ago week's 18,013.

Truckmakers planned to build 19,476 units last week, 1.72 percent below the previous week's 19,817 but 8.33 percent above the year-ago week's 17,978.

Chrysler's Bramalea, Ontario, plant closed last week to adjust inventories of the Eagle Premier, which had a 97-day supply at the end of July. The plant will resume operations Sept. 11.

Big 3 join refiners in pact to supplant methanol

AUTOMOTIVE NEWS/JOE WILSSENS

Deborah Bielski, an EPA technician, measures gasoline volatility.

New gasoline burns cleaner

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER
Copyright 1989, Automotive News

Big 3 automakers and major oil refiners are cooperating to kill the methanol-fuel initiative and substitute reformulated gasoline.

Even before President George Bush proposed his clean air bill to Congress, the Big 3 and oil companies "vowed to work with the same intensity and finances that America used to put a man on the moon," a government source said.

General Motors Chairman Roger B. Smith, Ford Motor Co. President Harold Poling and Chrysler Corp. Vice Chairman Gerald Greenwald already have signed documents committing their companies' resources to a joint program with the top oil companies to prove reformulated gasoline can meet Bush Administration clean-air goals.

ARCO recently began marketing a more environmentally benign fuel in California, where it does two-thirds of its business, for cars and trucks that use leaded gasoline. And ARCO says it is working on a version of the new fuel (called EC-2) for newer, unleaded-fuel vehicles. Sunoco and other oil companies also are working on the sweeping change.

The advantage to automakers would be the elimination of a costly methanol-vehicles program.

According to an auto-industry fuels expert, the auto companies have all signed a commitment to the concept of less-polluting gasoline. But signatures are still needed from representatives of several oil companies.

After the remaining oil executives sign, there will be another summit meeting of top auto and gasoline executives, now tentatively scheduled for January 1990.

"Getting the major auto companies and the gasoline makers together on the emissions problem is a bit like getting two elephants to dance," said Kelly Brown, an executive engineer for fuel economy and emissions control at Ford. "It takes time. Inevitably, toes are going to get stepped on and there's going to be loud protests. The interests of these two groups are frequently at odds."

Gasoline would have to change radically to meet the same emissions cleanup goals as even a limited number of alternative-fuel vehicles powered by hydrogen, methanol, propane, ethanol, or electricity.

Oil companies would need several years to make these new gasolines widely available. The new fuel would likely be more expensive than current gasoline, might get fewer miles per gallon, and might cause cold-start problems.

With reformulated gasoline, the oil companies would not have to provide an expensive parallel methanol refining and distribution system. Also, gasoline would remain unchallenged by what could eventually have been a competitive fuel with a lower and possibly more stable price.

Reformulated gasoline has not

see GASOLINE, page 48

4th-quarter car build to be lowest since '82

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Fourth-quarter auto production in the United States is scheduled to be the lowest for that period since recession-decimated 1982. The total also will be 9 percent below last year's.

The decline from 1988 is due to cutbacks by the Big 3. The transplant/joint-venture makers expect to produce more cars in the fourth quarter than they did last year.

Car production for the fourth quarter is scheduled at 1,723,609, the lowest total for that quarter since 1982 when the recession slashed auto output to 1,203,660. The fourth-quarter forecast is 9.20 percent below the 1,898,220 cars built in the fourth quarter of 1988.

Company forecasts indicate total calendar year production will be 6,965,750 cars, also the lowest total since 1982 when 4,973,870 cars were built.

The calendar year auto produc-

Mazda Credit steps toward independence

By Louise Kertesz
AUTOMOTIVE NEWS STAFF REPORTER

Mazda American Credit has taken steps to become a finance company independent of its partner, Marine Midland Automotive Financial Corp.

Mazda Credit is losing share of retail and lease financing at Mazda dealers because Marine, the fourth largest U.S. auto financer, is tightening its loan policies, said finance industry sources.

Marine's contract to fund credit programs and service loans for Mazda American Credit will expire in 1992, and Mazda is interviewing candidates for a top job that might involve creation of an independent captive finance company. At the same time, Marine's parent bank is moving away from automotive business.

Kazutomo (Ted) Tsuchiya, Mazda Credit executive vice president, said in an interview that an independent credit operation is "obviously kind of a longterm view I have in mind personally. Our mission is to satisfy dealers, in terms of service and required funding." Pursuing those goals, Mazda Credit could become independent, he said.

A finance company executive who was a candidate for the job at Mazda Credit was stronger: "They are looking for someone to fully develop their own captive," he said. "They'll probably open their own branches in a year."

Mazda Credit's share of its dealers' retail and lease business eroded to 13 percent from 19 percent in fiscal 1988. Mazda dealers have complained that in the last year Mazda Credit rates and service were not competitive.

Captive finance companies of the Big 3 get 30 percent of their

Nissan UV-X bows at Frankfurt

Nissan Motor Co. built its UV-X prototype expressly for the Frankfurt auto show, which opens this week. In addition to the UV-X and the new BMW 850i, another hit at the show is expected to be Opel's Calibra coupe. Details about the Calibra appear on Page 3.

GM dealer faces prison for role in laundering drug money

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Delmus "Bunt" Gross, a General Motors dealer in Irvine, Ky., faces the prospect of 90 years in prison and fines of $4.5 million when he is sentenced Oct. 18 for his role in laundering illegal drug money.

Gross

mobile-Geo dealer, was convicted Aug. 24 of 18 counts of laundering money through his dealership from 1983 to 1986 and conspiracy in U.S. District Court in Lexington, Ky.

He was acquitted of the more serious charge of continuing criminal conspiracy.

A leading citizen of tiny Irvine, population 3,500, Gross also faces loss of his dealership because felony convictions are grounds for franchise revocation, according to a GM spokesman.

Gross was indicted last December by the U.S. attorney's office. He is free on a $100,000 bond.

Two other defendants were convicted on money laundering and drug conspiracy charges involving the importation of cocaine into northern Kentucky and southern Ohio. They will forfeit nearly $1.2 million in property in addition to other punishments.

"Gross failed to report currency transactions," said an Internal Revenue Service agent who headed the investigation. "He disguised his loans in financial records, laundering $1.6 million through his dealership."

DOT chief a mystery to most auto leaders

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

Skinner will meet with auto executives in Detroit next month.

WASHINGTON — Samuel K. Skinner is one of the most visible and yet — to Detroit — elusive cabinet members in the Bush administration.

Since taking over seven months ago as transportation secretary, he has been a staple on the evening news, from the Exxon Valdez oil spill in Alaska to the labor dispute at Eastern Airlines.

Because so many other issues have occupied the 50-year-old attorney from Chicago, auto lobbyists — who analyze every move by the administration and Congress — said Skinner's priorities for NHTSA are still unclear.

"We're not sure he's gotten around to automobiles yet, but he sure loves to talk cars," one lobbyist said. In fact, Skinner recently gave the command for racers to start their engines at a 500-mile Indy car race at Michigan International Speedway.

Skinner said his primary concern is safety and that his philosophy on regulating the auto industry will unfold further as work progresses on a national transportation policy. He expects to present his master plan for unclogging the nation's transportation system to the White House by year's end.

That policy, which will set goals into the 21st century, will most certainly have implications for the auto industry. While the plan could propose funding for futuristic programs such as smart highways and intelligent vehicles, the most pressing matter is Skinner's commitment to decide which passenger-car safety standards NHTSA will propose for light trucks, vans and sport-utility vehicles.

He isn't ready to discuss what safety features he'll recommend, despite pressure from the Senate Commerce Committee, which is pushing for the standards.

Domestic manufacturers have argued that more regulation is unnecessary because automobile safety features for light trucks and multipurpose vehicles already are being phased in. The Big 3 will have ample opportunity to lobby their concerns in mid-October when Skinner journeys to Detroit to meet separately with each automaker.

Skinner views his trip as a prerequisite to understanding the industry.

"I can learn a lot from the automotive industry on clean air, engines, safety, competition and productivity," he said. "Those are all areas I'm looking forward to going up there and learning about."

Detroit has had limited opportunities to judge Skinner. In one of his first decisions affecting the auto industry, he set 1990-model-year corporate average fuel economy at 27.5 mpg. General Motors and Ford Motor Co. had lobbied for the standard to be rolled back to the 1989 level of 26.5 mpg.

For the three prior years, GM had asked for a reduction in CAFE and Skinner's predecessors had reduced it. But Skinner decided he would not automatically grant the rollback petition.

"I started with a clean slate," he said, adding that he weighed GM's arguments against the Bush administration's broader national policy of boosting fuel economy and minimizing dependence on foreign oil.

The same approach — almost a businesslike management-by-ob-

A thousand scenarios as Ford and Saab talk

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The long-rumored, now-confirmed partnership talks between Ford Motor Co. and Saab-Scania could lead to several possible forms of cooperation, industry analysts say.

But though Saab-Scania President Georg Karnsund denies that Ford will take over Saab's car division, some analysts view that as the most likely outcome, with a Scania-Ford truck linkup thrown in as a sweetener.

The two companies last week confirmed they have been holding talks, which had been rumored for several months.

"The purpose," the automakers said in a joint statement, "is to explore whether there are any possibilities of closer cooperation in various areas of the automotive business."

One intriguing aspect of such a venture is how it might affect bidding for another upscale automaker, Jaguar, which loses its government protection against a takeover next year. A Ford-Saab link could raise the stakes for the British luxury-car company.

Analysts in Europe point to several possible Ford-Saab alignments, including:

- Joint development of a mid-range model that would replace the aging Saab 900.
- Collaboration on a six-cylinder engine that is much-needed by Saab, or cooperation on other components.
- Ford distribution of Saab cars in the United States as well as Saab distribution of Ford products in Sweden.
- Ford use of extra capacity at a new Saab plant about to open in Malmo, Sweden.
- Merger of Ford's U.S. heavy-truck operations with Scania, the world's fourth-largest producer of heavy trucks.
- Ford's acquisition of a majority interest in the Saab car division.

Ford's interest in Saab is not expected to start a bidding war — Saab's talks with Volvo, Mazda and, reportedly, Fiat have already fizzled. Still, Ford's courtship of Alfa Romeo three years ago sparked an unexpected and successful countermove by Fiat.

"I think the queue would stretch from Nykoping to Linkoping if only Sweden were a member of the European Community," said John Lawson, European auto analyst at Nomura Securities in London.

Delays hit Ford-Nissan minivan venture

By Louise Kertesz and Laura Clark
AUTOMOTIVE NEWS STAFF REPORTERS

Almost one year after signing an agreement to design and produce a front-wheel-drive minivan for the North American market, Ford Motor Co. and Nissan Motor Corp. in U.S.A. face a production delay and labor conflicts at Ford's Avon Lake, Ohio, assembly plant.

The companies said recently that because of development delays, production of the minivan will begin early in the second quarter of 1992 — almost four months after the scheduled December 1991 launch.

The vehicle was scheduled to debut as a 1992 model, but a Ford spokesman said it may go on sale as a 1993 model.

Duane Miller, vice president for design engineering at Nissan Research and Development, in Plymouth, Mich., said the fact that Ford and Nissan have not worked together on a project in the United States before has contributed to the delays.

Though Ford said the delay was caused by a design change Nissan made on the vehicle, Miller said, "There have been no significant design changes made up to this time." He added that Nissan research and development has begun its prototype build, and design changes could become necessary.

Sources close to the Nissan/Ford project said the two companies have not always seen eye to eye on development and manufacturing issues. Corporate disagreements and a commitment to making the minivan "recall proof" also could have contributed to the delay, project sources said.

Meanwhile, some local union officials are opposing implementation of the Japanese-style "team concept" Ford wants.

When Nissan and Ford agreed to the project, Ford and UAW Local 2000 at Avon Lake came to a "con-

GM Europe's new Calibra coupe bows at Frankfurt show

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

Calibra is the spiritual successor to the Opel GT.

FRANKFURT, West Germany — General Motors Europe's wedgy new Opel/Vauxhall Calibra coupe is shaping up as the smash hit of this week's Frankfurt auto show.

GM, which has released the first technical details, is seeking to upstage BMW's 850i coupe with its low-drag, two-door version of the mid-sized Opel Vectra/Vauxhall Cavalier that was introduced a year ago.

The Calibra, which goes on sale next summer, is being positioned by GM Europe as a spiritual successor to the Opel GT. That car went out of production in 1973 after becoming the German make's best-known model in the United States.

Indeed, the Calibra is viewed by some industry observers as a candidate for the U.S. market if Opel's long-delayed American import program is ever revived. But a GM spokesman said European production volume probably will not be high enough.

In Europe, GM aims to polish up the somewhat stodgy Opel and Vauxhall brands with a high-profile model that has more individual character than sporty derivatives of mainstream offerings.

GM claims the super-sleek Calibra's 0.26 drag coefficient is the lowest ever recorded on a four-seat production car. The low-nosed coupe is distinguished by wrap-around headlights — with ellipsoidal lamps only 2.8 inches high — and shallow air intakes above and below the bumper line.

It has a sharply raked, 64-degree windshield; frameless door glass; and semi-flush side glass that fully covers the B-pillars.

The Calibra will be built in Ruesselsheim, West Germany. GM insiders project 1990-calendar-year sales of 25,000 units after next summer's introduction in Europe.

Europe's coupe sector is loosely defined, but GM said sales last year amounted to about 185,000 units — down from about 270,000 in the early 1980s. About two-thirds of last year's coupe market belonged to such Japanese cars as Toyota Celica and Honda Prelude.

"The Europeans had virtually abandoned the coupe sector to the Japanese," said Peter Schmidt of Automotive Industry Data in London. "But suddenly the market is becoming very interesting again, and the Europeans are doing something about it."

Volkswagen burst through last year with the Corrado coupe to go with Audi's 80/90-based coupe. They will likely be joined by the rumored Pininfarina-designed Peugeot 405 coupe and a sporty, two-door version of the next-generation Mercedes 190.

Pricing has not been announced, but GM sources say it will be priced below the VW Corrado, which sells in Germany for 42,500 marks ($21,573).

Calibra engine choices include a 16-valve 2-liter with 150 horsepower and an eight-valve version of that engine.

Ads feature chairman explaining 'what makes a Porsche a Porsche'

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — In an effort to clarify "what makes a Porsche a Porsche," Porsche Cars North America has begun a television and print advertising campaign highlighting the automaker's chairman and his philosophies.

"We want to tell the world why Porsche is unique — both the product and the company itself," said Brian Bowler, Porsche Cars North America president and chief executive officer. "We make every Porsche a real Porsche. We think that's a little misunderstood. We want to communicate what makes a Porsche a Porsche."

Wager

David Wager, Porsche vice president and director of marketing, said such a campaign is necessary because some prospective buyers seem to believe that some late model Porsches are not "real" Porsches.

According to Wager, Ferdinand "Ferry" Porsche, Porsche AG chairman, is the ideal person to dispel that notion. "He's credible, he's believable and he comes across so well," said Wager.

The campaign explores three specific Porsche principles: independence of spirit, timelessness of design and the value of motorsports.

The television segment features two-minute and 90-second commercials. The somewhat somber commercials cut back and forth from scenes of early- and late-model Porsches zooming down a race track to 80-year-old Ferdinand Porsche.

The campaign breaks today with a 90-second spot during the pregame show saluting the 20th anniversary season of ABC's Monday Night Football.

It will be followed by airings on the American League and National League baseball championships, Monday Night Football and other televised sporting events. The campaign will extend through mid-November and will resume next spring, Bowler said.

Porsche's print campaign includes three special "tear-out" inserts that will appear in several magazines with upscale readership. Readers will find an envelope with a philosophical quote from Ferdinand Porsche on the outside. Inside are pictures of past and present Porsches and a message that expounds the company's philosophy.

The print campaign will begin in the Sept. 25 issue of New Yorker magazine. The insert will run only once in various magazines.

In the first eight months of this year, Porsche sold 6,677 cars in the United States, down 41.4 percent from 11,389 in the same period of 1988.

Porsche's ad campaign will use Chairman Ferdinand "Ferry" Porsche to connect new models with old.

Olds offers road service, swap program for buyers

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

BRIGHTON, Mich. — Under a customer satisfaction program unveiled last week, buyers of 1990 Oldsmobiles will receive 24-hour roadside service and the option to return their vehicle if they are unhappy with it.

Oldsmobile officials said the Oldsmobile Edge is the most comprehensive customer satisfaction program in General Motors history.

J. Michael Losh, who ranked improving customer satisfaction at the top of his list when he took over as division general manager June 1, said the program is part of a long-term strategy. Other "customer satisfiers" may be added under the Oldsmobile Edge umbrella, he said.

Oldsmobile will bear the total expense of the program and will advertise it aggressively, beginning in October, Losh said.

The Guaranteed Satisfaction part of the program allows an Oldsmobile buyer who is not completely satisfied with a vehicle to return it after 30 days or 1,500 miles, for credit toward the purchase of another Oldsmobile.

The vehicle cannot be returned if it has more than $300 worth of damage.

The Roadside Assistance part of the program is good for 36 months/50,000 miles. Oldsmobile buyers receive, at no charge, 24-hour toll-free phone assistance and roadside dispatch, emergency roadside service and lost-key or lock-out service.

In addition, Oldsmobile will pay up to $500 for meals and accommodations if the vehicle must be repaired overnight when the driver is 150 miles or more away from home.

Oldsmobile has contracted with the Cross Country Motor Club of Boston to provide the roadside service. The club has nearly 13,000 outlets in the 50 states.

The third part of the program is GM's bumper-to-bumper warranty, which was introduced in the 1989 model year. The warranty covers the entire vehicle for three years/50,000 miles with a $100 deductible for each repair visit after the first year or 12,000 miles.

Guaranteed Satisfaction was first tried by Pontiac with the Grand Am in Southern California. In the 1989 model year, it was expanded nationwide to the Pontiac Grand Prix and Oldsmobile Cutlass Supreme.

McCabe named to high Mazda job

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

IRVINE, Calif. — A year after creating a unified sales organization, Mazda Motors of America has put U.S. operations under the control of one executive.

McCabe

George McCabe, previously one of two group vice presidents and deputy general managers, becomes group vice president of operations and will head a newly formed operations group. He is responsible for sales operations, dealer development, advertising and Mazda's five regional offices.

James Seidel, who had been the other group vice president as well as deputy general manager in charge of dealer development, becomes vice president and Pacific region manager. He had been vice president and Gulf region manager before taking on the task of integrating Mazda's Eastern and Western operational units 14 months ago.

In addition, Mazda formally appointed Richard Colliver to head a task force looking into a second U.S. retail channel. The men who headed similar teams for Nissan's Infiniti and Toyota's Lexus became general managers when the luxury-car divisions were formed.

Colliver, formerly senior vice president of Western-area operations, has headed the task force for months, but this is Mazda's first indication that his old post has been eliminated.

Mazda's restructuring stopped short of naming a general manager the company has been seeking, although it did not rule out other changes in the future.

"This is a fine tuning of what we did a year ago," a spokesman said. "We plan to continue to review Mazda Motors of America's organization. If a decision is made to adda general manager, that would be announced at the appropriate time."

McCabe clearly has a stronger hand than before, but he did not pick up all of Seidel's duties and gave up some responsibilities.

Yoshi Taura, president of Mazda Motors of America, adds five additional American vice presidents to the eight Japanese and American executives already reporting to him. He now has much more of a hand in day-to-day operations than is typical of the top Japanese official in other U.S. arms of Japan-based automakers.

Seidel

Two officials who previously reported to McCabe — William Hackett, vice president of marketing (at Mazda, duties include product planning, product development and research but not promotions and advertising), and Duane Bowen, vice president of public relations — now report to Taura.

Also reporting to Taura directly are David Watson, vice president of logistics; James Harcum, vice president of service; and Charles Riech, vice president of parts.

The restructuring ends a transitional East-West division of Mazda Motors of America by eliminating a layer of management between McCabe and the regional heads.

James Wiesner, previously senior vice president, Eastern area operations, becomes assistant group vice president of sales, responsible for sales planning, sales promotion and dealer development.

James Richardson, previously Pacific region vice president, becomes vice president of sales promotion. Lowell Smith, who headed the Northeast region, becomes director of sales planning.

Janet Thompson, vice president of advertising, will continue to report directly to McCabe.

Besides Seidel, the other new regional managers are William Goetze, who moves from Southeast regional manager to Northeast region vice president, and Robert Parker, who moves from vice president of sales support to Southeast regional manager.

Joseph Nalley and Peter Lassen remain as managers of the Northwest and Gulf regions, respectively.

Mazda Distributors Great Lakes remains Mazda's only independent distributor, serving five Midwestern states.

Iacocca promotes reading

AUTOMOTIVE NEWS/JOE WILSSENS

Chrysler Corp. Chairman Lee Iacocca launches Running Start, a $2.1 million program that gives special reading incentives to first-graders in 10 U.S. school districts in which Chrysler has facilities. To kick off the program, funded by the Chrysler Corp. Fund, Iacocca met with 130 first-graders from two Highland Park, Mich., elementary schools.

August sales strong; cars, trucks up 9%

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Rebates, dealer discounts and news of 1990-model price hikes pushed August sales of cars and light trucks 9.65 percent ahead of last year's total.

Deliveries climbed to 1,416,728, compared to 1,292,055 in 1988.

Dealers, analysts and automakers said sales were a good deal better than anticipated. August records were posted by Ford Motor Co., GMC Truck, Chevrolet, Jeep-Eagle, Mitsubishi Motor Sales of America, Toyota Motor Sales U.S.A. and Volvo Cars of North America.

More-confident consumers and shoppers who needed to replace older vehicles helped swell the delivery rate in August, according to Wendy Beale Needham, an analyst with Smith Barney, Harris Upham & Co. in New York.

Although incentives are a permanent fixture, Needham said she thinks the car companies will begin to ease back a little on rebates.

"At an annualized rate, General Motors is currently spending $6 billion," and other companies are spending heavily, too, Needham said.

Dealers and a company analyst agreed that bargain-hunting buyers taking advantage of rebates hiked August sales.

Chevrolet's inventory clearance program helped pull sales 50 percent above the previous month for Warnock Chevrolet in Morristown, N.J., according to Edward J. Bu-

see SALES, page 46

Lexus deliveries: 1,742 through early Sept.

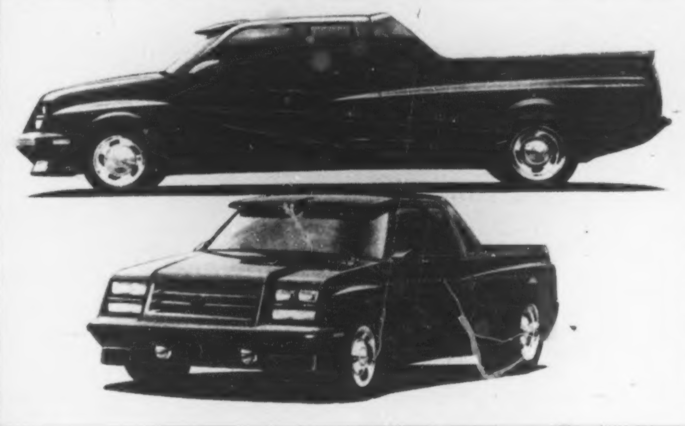
TORRANCE, Calif. — In its first sales announcement, Lexus Division said it delivered 1,742 cars through early September.

The 68 dealers handling Toyota's fledgling luxury car sold 1,448 of the flagship LS400 models and 294 ES250 sedans from early August to Sept. 6. Though the first cars were shipped to dealers more than a month ago, Lexus' official introduction was Sept. 1.

In addition, Lexus reported it has cash deposits from about 1,000 customers who are waiting for specific color and option mixes.

Lexus, which boasted in prelaunch advertising that it "has never had a dissatisfied customer," is trying hard to justify the claim.

— Jesse Snyder



Knudsen's conversion
Knudsen Automotive of Omaha, Neb., is offering the Tridon STT, an exotic conversion of a Chevrolet/GMC C3500-series pickup. The conversion is built on an extended-cab model with an eight-foot bed and dual rear wheels, and designed for special transportation or towing needs. It retails in the high-$20,000 to low-$30,000 range. The Tridon Sport, not pictured, is priced in the low- to mid-$20,000 range.

Study profiles buyers of compact trucks

Buyers of compact trucks are a very satisfied group.

Some 61 percent actually bought the model they had in mind when they began the purchase process and 79 percent would buy the same make and model if they could do it over again, according to a Newsweek Market Research study.

The study, "1989 Buyers of New Compact Trucks," documents the importance of pre-selling those models. It represents the most recent effort in an independent marketing research program the magazine has conducted for more than 30 years on behalf of, and in conjunction with, the auto industry, according to Jim Schwartz, Newsweek Market Research manager.

Many people influence the purchase decision, including the principal driver, spouse, auto dealer and friends.

The purchase process is lengthy. Sport-utility buyers spend a median of eight weeks gathering information, four weeks deciding to buy, three weeks visiting dealers and one week deciding on the exact model. The parallel weeks for pickup buyers are four, three, two and one, respectively, according to the study.

Trucks are bought by Americans of all ages, and half of all new compact truck buyers are first-time truck buyers.

The median price of a sport-utility is $17,500, significantly higher than the pickup's $11,500 median price.

More than half the buyers of compact trucks are professional/managerial people and 60 percent are college-educated.

The median household income for a sport-utility buyer is $59,099. For the pickup buyer, it is $38,524.

Eighty-eight percent of pickup buyers and 73 percent of sport-utility buyers are male. The median chronological age of new compact truck buyers is 38; while the median psychological age — the age they actually feel — is 30.

Some 60 percent of sport-utilities and 53 percent of pickups are the principal vehicles in the household. The primary reason pickup buyers chose a new truck instead of a car is that they need the truck's cargo capacity/roominess. Sport-utility buyers primarily chose their new truck over a car because of its four-wheel-drive.

Some 99 percent of new private-sector compact trucks are used for personal transportation, the study found. The primary specific uses cited include commuting to and from work, running errands/shopping and pleasure driving. Only 28 percent of pickups and 16 percent of sport-utilities are used for business.

The median daily commute for pickup owners is 25 miles in 55 minutes, while the commute for sport-utility owners is 20 miles in 45 minutes.

Market Facts, Chicago, conducted the study from Feb. 24 to April 14, 1989. About 8,000 questionnaires were mailed, and 3,000 replies were received.

TRUCK BRIEFS

Pool accounts expanded

DETROIT — Ford and Dodge are adding a small number of converters to their pool accounts.

Such accounts are highly prized and sought. Last year when Chevrolet opened its consignment pool system to all qualified converters for the first time, it promptly tripled its number of pool companies to over 180.

Ford now seeks to replace about a half dozen companies that it lost over the past year, according to Jerome Mittman, Ford Division RV sales manager.

Historically, Ford has had 60 companies in its pool system, but the pool is currently down to 54.

Mittman said Ford has over 200 applicants vying for an account. It is sorting out 20 of the best qualified prospects for evaluation.

Mittman said it is difficult for Ford to ignore a high-volume firm like Mark III Industries, Ocala, Fla. But, large and smaller companies have an equal chance of being admitted.

Separately, Dodge has added a few pool accounts in markets where it hasn't been well-represented.

One company official said Dodge hasn't lost any, but has merely been seeking to improve its overall market coverage.

Dodge is reluctant to talk about any of the changes. However, further word is likely to come at the national meeting of its pool accounts on Oct. 26-27 in Nashville, Tenn.

Meanwhile, Chevrolet's pool is still open, according to James Green, assistant RV manager.

"We've changed a few accounts and added a few," he said.

Unfortunately, the shakeout in the van conversion industry still isn't over, and there are likely to be more changes in store for Detroit's pool accounts.

Holiday Rambler deal

MILWAUKEE — Harley-Davidson Inc. signed an agreement to sell Parkway Distributors, the aftermarket recreational vehicle parts and accessories distribution division of its Holiday Rambler Corp. subsidiary, to Stag Trailer Supply, Atlanta.

The agreement calls for a cash settlement. Officials declined to disclose the amount.

Holiday Rambler has been focusing its resources and efforts on building up its core businesses, the manufacture of recreational and specialized vehicles, and feels that Parkway no longer fits into its strategic plan, according to H. Wayne Dahl, chief operation officer of Holiday Rambler.

Parkway represents nearly 500 manufacturers and distributes over 7,500 RV products, while serving 3,000 dealers and retailers.

New Goshen Coach

ELKHART, Ind. — New Goshen Coach was awarded a 112-unit contract by Southeastern Michigan's Suburban Mobility Authority for Regional Transportation.

Goshen Coach was able to underbid competitors because its vehicles already came with certain features that were specified by the SMART system so that "we didn't have to raise our bid to meet their special needs," said Russ Gilpin, Goshen's sales coordinator.

The units Goshen Coach is producing for SMART seat 15 people and also have two forward facing wheelchair spaces and a hydraulic wheelchair lift.

Ontario bus contract

MISSISSAUGA, Ontario — Ontario Bus Industries has recently won contracts to build buses for 28 North American cities, including San Francisco, Milwaukee and Salt Lake City.

Most of the $39 million worth of business is for ORION transit buses; but the deal with Salt Lake is for 36 ORION II vehicles, which are specially designed for the transportation of the physically disabled.

Mississauga — Ontario Bus Industries' home city just west of Toronto — purchased 20 air-conditioned ORION V buses, the new 102-inch-wide bus newly designed this year.

Ontario Bus Industries is the only Canadian-owned transit bus manufacturer in North America.

Van conversions mark a strong model year

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Although some converters were hurt in this year's highly competitive market, the 1989 model year will go down as a good one for van conversion sales.

James Green, Chevrolet assistant RV manager, said his division increased its sales of vans to the upfit market by about 10 percent in the 1989 model year.

Green declined to provide specific numbers, but added that "Our retail sales are better than anticipated. We have some incentives out there. But basically the customers are still there."

James Lynch, Chrysler manager of special vehicles, said sales of Dodge chassis by conversion companies will be up about 15 percent for model year from a year ago.

Ford's conversion sales were off by about 8 percent for the model year through July, the latest period for which data is available, according to Jerome Mittman, Ford Division RV sales manager. He noted the beginning of an upturn in July, though.

Chevrolet and Dodge both appear to have increased their sales at least partly at Ford's expense for different reasons.

Chevrolet with its new-for-1989 program changed the focus of many converters. Not only did it triple the number of companies in its consignment pool to over 180, but the program also involves paying interest charges on chassis after a certain period of time, which makes converters more sensitive to selling them quickly.

For its part, Dodge has been more aggressive in incentivizing vans and van conversion chassis than either Ford or Chevrolet.

Meanwhile, the current incentives have done a good job of clearing out inventories.

Chevrolet, for example, had less than 30 days' supply of chassis in its pool inventory, including all vans in upfitter inventory, as of Sept. 1, Green said.

"We feel very comfortable with that," Green said.

However, Chevrolet will take a more conservative posture heading into the first quarter of the 1990 model year.

It will carry "skinnier inventories" to control costs and maintain better grip on the market.

This includes helping converters maintain better control of their inventories through new computer technology.

"Our goal is to provide a flow of chassis in line with a converter's sales rate," Green said. "Granted, he needs inventory to draw from, but our intent is to replace those orders at his selling rate and maintain the flexibility for a spring buildup."

Chevrolet is anticipating a 10 percent decline in market demand for the full 1990 model year, though it feels the October through December falloff alone could be steeper than that.

Supreme's new landscape body
Supreme Corp. of Goshen, Ind., has a new line of landscape bodies for standard truck chassis. The bodies have 128 square feet of platform area, space for tools and supplies and a drive-up tailgate and ramp for mowers, tractors and other equipment.

Government crackdown on drugs touches new-car dealers

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — U.S. government efforts to stem the flow of drugs and drug money mean more red tape and potential jeopardy for new-car dealers.

Although new-car dealers generally believe they understand what the U.S. government requires, a study by the Internal Revenue Service suggests otherwise.

As part of the war against drugs, drug dealers and their illicit cash profits, new-car dealers and other businesses are required to report transactions over $10,000 in cash to the IRS on Form 8300 within 15 days of the deal.

The dealers must also notify the buyer that they have reported the transaction, but they don't have to tell the customer that they will report the deal before it is completed.

A July IRS survey of 111 dealers in the IRS's Jacksonville district, encompassing northern and central Florida, turned up 68 dealers — or 61 percent — who had not filled out the appropriate forms at one time or another. In a survey earlier this year, 55 of 158 dealers, were found to be improperly reporting cash sales to the IRS.

In the July survey, a Jacksonville district IRS spokesman said, "We found 147 delinquent forms and assessed $13,800 in penalties to 68 dealers. We did not find unwillingness to file (but the dealers were not aware of their responsibilities). All the dealers were very interested in compliance."

In some cases, dealership management was unaware of the requirements to file the forms and in others, management was aware of its responsibilities but the employees were not well versed, the spokesman said.

Although the 8300 form has been in existence since 1985, the Jacksonville IRS spokesman said a match of records between banks and auto dealers indicated that not all forms were being filed. The surveys, said the spokesman, are intended to educate dealers of their responsibilities.

The Jacksonville IRS, said the spokesman, plans to re-visit the dealers to see if they are indeed willing to file the form.

The IRS charges a penalty of $50 for each failure to file with the agency and $50 for neglecting to inform the customer that the business filed. The IRS can fine an auto dealer up to $50,000 for failure to file with the agency and $50,000 for failing to inform the customer.

If the failure to file is intentional, then the fine doubles with no upward limit and criminal charges become a possibility.

Dealers, however, say they are aware of their responsibilities and file the appropriate forms.

Law enforcement agencies are increasing their efforts to curtail businesses that knowingly receive money from criminal activities — notably from drug dealers — and franchised auto dealers say they are willing to comply with the laws. But they differ with law officials who say they have a moral, if not legal, obligation to report suspicious customers.

A Drug Enforcement Administration spokesman said, "From a law enforcement point of view, there is no law restricting a businessman from accepting money. But dealers should question the source of large sums of cash, at least tipping off law enforcement official that a large transaction has occurred."

The law allows police authorities to seize the assets of a business that knowingly accepts criminally gained money.

Auto dealers say they are all for the fight against drug dealers, but it is not their job to be policemen. Many dealers also say they are aware of the IRS requirements to file a form for cash sales, though the recent IRS survey in Florida indicates that may not be the case at all dealerships.

NADA President Ron Tonkin said NADA doesn't want dealers jeopardizing themselves in the fight against drug dealers.

"If their assumption that the buyer is a criminal is correct, then retribution is a possibility," Tonkin said. "If it is incorrect, there is the possibility of legal action (for discriminating against a potential customer)."

Other dealers also say customers aren't always what they appear to be. Morton Zetlin, general partner of American Service Center, an Arlington, Va., Mercedes-Benz, Ferrari and Rolls-Royce dealer, said the firm recently sold a Ferrari to a customer with a business, established credit and a check for the down payment. The car was seized by the authorities in less than a month as a result of drug charges.

Richard Broughton, supervisor of the Washington, D.C.-area financial investigations group of the Drug Enforcement Administration, said there are situations that suggest a dealer knows the source of illegally gained money.

"For example, if a 17-year-old rolls up to a dealership and wants to buy a Nissan Pathfinder, says he's got crack and $9,000 and the dealer says, 'Go sell the crack then come back,' that is laundering money," Broughton said.

"Or if a 17-year-old kid with $17,000 in his pocket comes in and says, 'I'll give you the money, but don't fill out any forms,' and you tell him, 'Give me $9,500 in cash and get a cashiers check,' then you have instructed him how to commit a crime."

Flashy autos top list in drug-raid seizures

Popular lore suggests that drug dealers favor flashy cars, and a recent list of 245 cars and light trucks seized by the U.S. Drug Enforcement Administration seems to confirm the notion.

Corvettes, Cadillacs, Lincolns and European status cars dominate the list.

Corvettes accounted for only 0.2 percent of U.S. sales in 1988, but the 14 seized by drug agents represent 8 percent of the 175 cars on the list. Of the 92 Big 3 cars seized, 18 were Cadillacs and 10 were Lincolns. European imports accounted for only 5.5 percent of 1988 sales, but they made up 32.6 percent of the seizures, topped by Mercedes with 23.

U.S.-built sport-utility vehicles and pickup trucks accounted for most of the 70 trucks seized, led by eight Chevy Blazers. Nameplate leaders were Ford, 22; Chevrolet, 20; and Nissan, 8.

"For some drug dealers, status is a gold chain or a nice car," said Joe Keefe, public affairs spokesman for the Drug Enforcement Administration. "Others are low key. We would never say any particular kind of vehicle is associated with drug dealers."

Vehicles are seized either because they were being used to smuggle drugs, or because they were bought with drug profits.

The cars listed in a legal advertisement in the Aug. 30 USA Today newspaper were seized over a period of more than a year. Confiscated cars are usually sold at auction and the money goes to the Federal Asset Forfeiture Fund, which is used for law enforcement purposes.

DRUGS

FROM PAGE 1

transactions of $10,000 or more to the IRS on Form 8300.

Gross maintains his innocence, saying the jury did not understand the situation. His attorney has filed a motion for a new trial on grounds that the money laundering charges date to before 1986 when only banks were required to file currency transaction reports.

"This is as much a surprise to me as anybody," he said. "I did business with these fellas but it was nothing like what it sounds.

"I loaned money to them. I had done business with these people since 1977, but they had never done anything out of the ordinary,"

He warned other car dealers to know their customers. "I would say that a dealer should know his big customers," said Gross. "I sold these people as many as 30 vehicles at a time. They owned a replacement window business in Lexington."

Gross said he never tried to hide his transactions at Union Bank & Trust in Irvine.

"Eleven of those convictions involved the purchase of my home," he said. "It was the bank that told me to break it into $9,500 payments. It was their responsibility to report it to the government."

Under federal law, financial institutions and other businesses have to report cash transactions of more than $10,000.

Gross maintains he never owned a dollar's worth of drugs or sold a dollar's worth.

"I don't even drink," he said. "This is all a real blow to me. The jury just didn't understand the situation."

Since 1977, Gross said, he has sold the other defendants hundreds of vehicles. "I loaned them money and they paid it back, but I guess I just didn't know what it all meant."

He said the first time he noticed "something wasn't right," he stopped doing business with them He declined to elaborate.

But he said he ceased doing business with them in 1986.

In 1986, Gross' dealership had sales of $20 million. He said sales were soft earlier this year but have rebounded since the verdict.

He has been a dealer for 18 years.

Irvine residents were stunned by the verdict.

"He has a heart as big as a mountain," said Estill County Clerk Dora Henry.

She said if someone had to attend a funeral — even if it was out of state — and no transportation, Gross would lend them a car without hesitation and without a fee.

He was an avid supporter of the town's Little League and its charities, she said. One resident characterized Gross as a "regular Robin Hood."

At one time, customers could cash their paychecks at his dealership if the banks were closed. And if they were denied financing, "they could still buy a car and just pay Bunt."

Said one longtime resident: "I don't think he's guilty. He's already got enough money. Why would he risk it? He sponsors the baseball teams, helps the schools and anything else that comes along. He got framed."

A decade of fourth quarters

AUTOMOTIVE NEWS / CHARLOTTE WINTER

FORECAST

FROM PAGE 1

tion estimate is almost 164,000 units, or 2.30 percent, below the 7,129,420 cars built in 1988.

"For the first time this year, I think the automakers have come up with a production forecast that is realistic," said analyst Scott Merlis of Morgan Stanley in New York.

Merlis said he thinks the fourth-quarter schedule is about what it should be to keep the year-end inventory at a 65- to 70-day supply. Domestic-car sales for the calendar year are estimated at 7.4 million, Merlis said.

Bernard Campbell, an analyst with Data Resources in Lexington, Mass., was on the same wave length. He said, "The fourth quarter U.S. car forecast is a very realistic plan. The actual build may end up about 39,000 units lower, but that would still be within 2 or 3 percent of the schedule."

Analyst Arvid Jouppi of Arvid Jouppi Associates in Grosse Pointe Woods, Mich., said dealers will not be able to continue carrying their present heavy inventories, and the makers may have to offer sweeter incentives or cut production in order to reduce dealers' stocks. He said he does not believe any production cuts will be extreme.

Merlis and Campbell agree that the Big 3's fourth-quarter schedules are fairly conservative. All three have scheduled considerably fewer cars than they built in 1988.

General Motors expects to assemble 780,000 cars in the final three months of this year, 17.45 percent below last year's 944,880.

Ford Motor Co. said it plans to produce 394,000 cars in the fourth quarter, 11.89 percent below the 447,161 built in the comparable period of 1988.

Chrysler Motors' schedule of 237,000 cars is 19.96 percent below its 1988 total of 296,120.

Big 3 fourth-quarter production estimates total 1,411,000 cars, 16.42 percent below the 1,688,161 built in the fourth quarter of 1988.

On the other hand, transplant and joint-venture output for the final quarter is scheduled to increase 48.82 percent to 312,609, compared to the 1988 total of 210,059.

Newcomer Diamond-Star Motors, the Chrysler-Mitsubishi joint venture, forecasts fourth-quarter production at 56,078. The company began reporting production last January.

Toyota had not yet reached peak line speed at its Georgetown, Ky., plant in last year's fourth quarter. This year's estimated output of 47,000 units is 2½ times the year-ago quarter's 18,527.

New United Motor Manufacturing Inc. scheduled fourth quarter output at 43,300 units, substantially above last year's total of 16,239. Model changeover to the Chevrolet Geo Prizm affected the plant's fourth-quarter output in 1988.

Nissan Motor Manufacturing Corp. U.S.A. scheduled 2.10 percent more cars this year, but Honda of America Manufacturing's forecast shows a dip of 3.54 percent, and the projection by Mazda Motor Manufacturing (U.S.A.) Corp. is down 10.93 percent.

Subaru Isuzu Automotive in Lafayette, Ind., said it could not supply a fourth-quarter auto production forecast at this time.

tera, general manager.

Close-out time is always pretty good but "we had a much better month because most people knew about the price increases and expected pretty big savings," said Steve Fish, general manager of Freeway Dodge in Minneapolis.

Price hikes on 1990 models may have caused some people to shop more actively for 1989 models in August, suggested Joel Pitcoff, research and analysis manager for Ford Motor Co.

Pitcoff added, "These bargain hunters are not the fourth-quarter intro buyers."

In August, sales of U.S.-built and imported cars climbed to 973,343, 10.35 percent ahead of last year's 882,014.

In terms of car market share, Ford was the only member of the Big 3 to gain. Including sales of captive imports, GM lost more than a percentage point and Chrysler Motors lost about half a point.

Among foreign carmakers, the Japanese share including transplants rose more than 3 percentage points.

Domestic car deliveries, without captives, rose 14.22 percent to 685,365 from 600,026 last year.

All eight U.S. automakers reported year-to-year sales gains.

Sales momentum peaked in the final 10 days of August when U.S.-car deliveries rose 36.23 percent.

Ford and two transplants, Toyota and Mazda, reported major domestic-car sales gains compared to August 1988.

Imported-car sales moved ahead 2.12 percent to 287,978, compared to last August's 281,988.

Although the import-car share dropped 2.39 percentage points in August, a third of the foreign carmakers sold more cars this year.

Imports took 29.58 percent of the market, compared to 31.97 percent in 1988.

For the first eight months of 1989, deliveries of U.S.-made and imported cars were 4.38 percent below the 1988 total.

At the end of the first half, this year's sales trailed last year's by 6.55 percent.

Each of the four U.S. car and truck makers sold more cars and light trucks in August than they did last year.

Light-truck sales climbed to 443,385 units, an increase of 8.13 percent over 410,041 in August 1988.

Both Ford and Chevrolet truck sales set records for August.

ceptual agreement" to discuss alternative production methods. Those include work teams and a reduced number of job classifications.

Signs point to a struggle as Ford details its work demands. Avon Lake is "one of the most militant locals in the UAW, with a very anti-team-concept work force," said John Schmidt, a member of the local bargaining committee.

Schmidt said most members of the bargaining committee are opposed to the new work methods. But a second local committeeman, who wished to remain unidentified, predicted workers would accept the new methods.

In two or three weeks, Ford is expected to spell out to the union what kind of methods it wants, the second local committeeman said. The membership will subsequently vote on the new methods, he said.

A Ford spokesman said that discussions with the union about changing work methods have been going on since the project was announced and that no formal negotiations are planned.

Schmidt said, "We're going to fight it (the team concept) 100 percent, you can count on that. I have 14 years (left). I'm not going to work in a system where they break me before I retire. I have never in my life seen Americans work like they do at NUMMI."

Workers at New United Motor Manufacturing Inc., the General Motors-Toyota joint venture in Fremont, Calif., were among the first to agree to the team concept.

Unlike GM and Chrysler Motors, Ford has been cautious with alternative production methods. It is implementing them at plants that are being upgraded to build new products, including the Wayne, Mich., assembly plant and the new Romeo, Mich., engine plant.

In exchange for Avon Lake workers accepting the new methods, Ford said it would allow union input into the design of the expanded facility and consider adding an on-site day-care center.

Schmidt said, "Just about everything Ford promised, they reneged on."

The second local committeeman said Ford honored its promise to give the union a voice in the facility's design and that union suggestions including three cafeterias and training rooms "are in the blueprints."

About 1,000 new workers will be added, bringing the work force to about 3,000.

Chevy adds 1990 Lumina to rebate list

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Several auto companies announced new and/or enhanced incentive programs last week.

Chevrolet added a $750 rebate on all models of its 1990 Lumina sedan, increased the rebate on all 1988 and 1989 S-10 pickups to $1,000 and raised the S-10 Blazer rebate to $1,250.

The GMAC First Time Buyer Program, offering a $600 down payment on eligible Geo vehicles, has been extended to include Geo Trackers and Chevrolet S-10 pickups.

Consumer rebates range from $400 to $1,000 on Chevrolet and Geo cars and from $400 to $1,250 on trucks and vans.

Oldsmobile doubled the consumer rebates on its 1989 Cutlass Ciera to $2,000. Rebates on other Oldsmobiles range from $1,000 to $2,500.

GMAC financing alternatives continue on eligible Oldsmobile, Chevrolet and Geo models: 2.9 percent for 24 months; 5.9 percent for 36 months; 6.9 percent for 48 months; and 10.9 percent for 60 months.

Hyundai announced consumer rebates on the following Excel models: base three-door, $500; base four-door and GL, $750; and GLS, GS and SE, $1,000.

Hyundai also is offering dealer incentives. They are $300 on the three- and four-door Excel models and $500 on the Sonata. Sonata dealer incentives are based on quotas. The Hyundai program expires Oct. 5.

Nissan is offering buyers cash rebates of up to $2,000 on Stanza models or 7.9 percent financing for 48 months or 9.9 percent financing for 60 months.

Nissan dealer incentives range from $100 to $2,000 on Sentra models and from $200 to $2,000 on 1990 Axxess models, Hardbody pickup trucks, two-door Pathfinders and all vans. The Nissan incentive program runs through Dec. 5.

Volkswagen increased the consumer incentive on the Fox from $200 to $500 and extended its current consumer rebate program through Oct. 31. VW's rebates range from $500 to $2,000. Customers may choose special financing rates in lieu of rebates: 4.9 percent for 24 months; 6.9 percent for 36 months; 6.9 percent for 48 months; or 9.9 percent for 60 months.

Subaru is extending its current program through Oct. 3. Its rebates go to the consumer in some geographic areas and to the dealer in others.

Car output in August is 4-year high

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. auto production in August was the highest for that month in four years.

Last month's output of 537,308 cars was the highest August build since the 550,469 units assembled in 1985. The August total was 91.83 percent above July's 280,093 (a model changeover month) and 7.71 percent more than the year-ago month's 498,847.

Last week's scheduled car production of 109,342 dipped 10.12 percent from the prior week's 121,653 and slipped 10.09 percent below the year-ago week's 121,609 due to the Labor Day holiday.

Estimated production last week was split as follows: General Motors, 49.61 percent; Ford Motor Co., 19.73 percent; Chrysler Motors, 13.72 percent; Honda of America Manufacturing, 5.26 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.11 percent; Toyota Motor Manufacturing U.S.A., 2.71 percent; Nissan Motor Manufacturing Corp. U.S.A., 2.04 percent; Diamond-Star Motors, 2.04 percent; and New United Motor Manufacturing Inc., 1.78 percent.

Truck production last month was 353,000 units, 57.04 percent more than July's 224,787 and 5.55 percent above the year-ago month's 334,439.

Targeted output of 68,645 trucks last week declined 1.90 percent from the previous week's 69,975 and dropped 3.74 percent from the year-ago week's 71,314. Truckmakers worked only four days last week because of the holiday.

Year-to-date, 2,957,717 trucks have been completed, 4.21 percent more than the 2,838,281 built last year at this time.

Ford idled its Dearborn, Mich., car facility and Lorain, Ohio, truck plant today. They will be down one week. Dearborn, which assembles about 4,400 cars per week, is closed because of a parts shortage, and Lorain, which builds 4,000 trucks each week, is idle because of slow sales.

Canada cars up 31% for month

Canadian car production for August totaled 67,382 units, 31.33 percent more than July's 51,309 and 200 units more than the year-ago month's 67,182.

Scheduled assembly of cars last week was 15,619 units, 7.33 percent below the prior week's 16,855 and 3.89 percent below the year-ago week's 16,251.

So far this year, 659,068 cars have been built, 11.03 percent lower than the 740,745 completed last year at this point.

Truckmakers built 70,621 units last month, 84.93 percent more than the July total of 38,187 (a model changeover/vacation month) but 2.12 percent below the year-ago month's 72,149.

Chrysler Motors' Bramalea, Ontario, plant resumed output today after a two-week shutdown due to high inventory of its Premier line.

The Bush Revolution: tighter rules

'A new balance' after 8 easy years

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Toni Harrington was only half listening to Samuel K. Skinner, the new secretary of transportation, at a March 17 meeting.

"He was talking about things like airline terrorism and the Exxon Valdez oil spill," recalled Harrington, a lobbyist for American Honda Motor Co. "And then, it was just like he was thinking, 'Oh, God, I'd better say something about autos.' Skinner started talking about stricter fuel economy."

The snippet made Harrington sit up and take notice.

"The handwriting was on the wall," she said. "The Reagan administration was almost ready to do away with CAFE — and this administration, so early on, was hinting it was ready to return CAFE to its statutory limit."

Bush

Two months later, Skinner announced that the 1990 corporate average fuel economy would be 27.5 mpg, the statutory figure.

By that point, Harrington knew "we would get hit with a slew of new regulations."

After eight years of little new regulation under the Reagan administration, President Bush is moving society — and the automobile industry — to what several members of the administration have called "a new balance."

FRANKFURT

Germans display flashy prestige cars to counter Japan's brand of pizzazz

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — German carmakers, facing a Japanese threat at the prestige end of the market, showed some unaccustomed flash at the Frankfurt auto show.

BMW's sleek 850i and Opel's much-praised Calibra are coupes bearing minimal resemblance to sedan siblings — a departure from past two-door practice in Europe.

Audi's breezy cabriolet study is likely to go into production. Meanwhile, two other German makers offered adventurous glimpses into a more distant future in the form of Porsche's Panamericana and VW's IRVW 4 Futura concept studies.

But the Japanese made their presence felt. Honda unveiled the fourth-generation Accord; Toyota and Nissan displayed new concept cars and Nissan's new Infiniti luxury division was helicoptering journalists from the show for off-site test drives.

Though it did little to capture the imagination, the redesigned Accord is generally ranked as the most significant introduction here. Visually little-changed, the new model, with which Honda hopes to thrust into the upper-middle market, is 1.18 inches higher at 54.8 and its wheelbase is 4.7 inches longer at 107.2. Honda says the

Methanol debate gains momentum

Big 3 explain goal of new-gas study

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Oil refiners and automakers last week denied a report published Sept. 11 in Automotive News that said they are working to supplant methanol with reformulated gasoline to meet the targets of the Bush Clean Air Bill, but a controversy remains.

Methanol interests, EPA officials and some oil and auto employees remain convinced the objective is to eliminate the mandate for methanol or another alternative fuel by means of a joint multimillion-dollar program to improve gasoline.

The automakers say they have teamed with the oil companies on the reformulated gasoline study as part of an effort to fully examine all alternative fuels. Sources told Automotive News that heads of the Big 3 and major oil companies are working together to kill the methanol initiative.

"The Automotive News conclusion is dead wrong," said Harold A. Poling, Ford Motor Co. vice chairman.

The auto companies say their choice of research partners stems from a long-term relationship with companies involved in the "transportation-fuels" business.

"People in the methanol business know about methanol, but they are not people who know about transportation," said Helen O. Petrauskas, environmental and safety engineering vice president at Ford. Petrauskas said Ford wants a scientific study of all alternative fuels.

"Saying that car companies are trying to prove (the benefits of) reformulated gasoline really anticipates the findings," she said.

"We're proceeding fairly aggressively on our methanol program," said Petrauskas, who believes the methanol engineering issues will be solved.

"The toughest issues are the marketing issues. What incentive is there to buy this car?"

Chrysler Motors said it, too, is examining all alternative-fuels possibilities.

"We support the administration's alternate-fuels program," said Robert G. Liberatore, executive director of public policy and legislative affairs at Chrysler. "But we also suggested reformulated gasoline should be on the list.

"Rather than some tiny percentage of the fleet, we get a big bang in a short time," he said. "There are 170 million cars and trucks out there already. Cleaning up those vehicles is what we can do most quickly.

"As far as talking to the methanol people rather than the petroleum people on research, they're usually one and the same," Liberatore said.

Dealers divided on selling cars with new fuels

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

The prospect of selling alternative-fuel vehicles appeals more to new-car dealers in Los Angeles than to dealers in other heavily ozone-polluted U.S. urban areas.

California import and domestic car dealers knew more about alternative fuel legislation and were more certain that they could sell those vehicles, even at higher prices, an Automotive News random telephone survey disclosed.

Los Angeles dealers will be among the first to face the possibility of selling "clean-fuel vehicles" in 1995, since L.A. was tagged the most polluted metro region in the country in President Bush's clean-air proposal.

Anything that's new is difficult to sell, said dealers in four of the most polluted metropolitan regions. Bush's clean air bill, presented July 21, calls for alternative-fuel vehicles to be sold first in the country's most polluted metro regions.

The nine cities tagged dirtiest for

Foresters warn 4-wheelers: tread lightly

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

DENVER — Four-wheel-drive access to public lands could be severely curtailed — and sales of sport-utility vehicles could suffer — if drivers don't confine themselves to approved roads and trails.

As the popularity of 4wd pickups and sport-utilities has climbed in recent years, so has the damage they inflict on public lands. And though relatively few of the nation's one million 4x4s sold annually venture from paved routes, untold miles of "unwanted" roads are being created each year in the name of adventure.

The U.S. Forest Service believes auto manufacturers share some responsibility. Through a recently expanded program, the agency has been pushing the industry and its advertising agencies to promote enlightened off-highway driving.

"It's time the industry showed some responsibility and commitment. If they don't, then we're all going to go under, and we will continue to clamp down on off-highway vehicles," said Cliff Blake, national education coordinator for the program, called "Tread Lightly," headquartered in Ogden, Utah.

Inventor of 'blinking' wiper to have his day in court

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

For Robert W. Kearns, mechanical engineering has been a lifelong passion. He holds 35 patents in disciplines from guided missile navigational systems to automotive electronics.

Yet, the 62-year-old basement inventor with a doctorate in engineering says he has never made a dime from any of them.

Kearns

That may change in November when Kearns goes to the U.S. District Court for Eastern Michigan against Ford Motor Co., which he says stole one of his most successful commercial inventions — intermittent windshield wipers.

Kearns, who now resides in Gaithersburg, Md., began suits in 1978 against virtually every foreign and domestic automaker, charging infringing on his windshield wiper patents.

He has refused settlements from many of them and is seeking $50 for every vehicle produced with intermittent wipers going back to 1972. A favorable judgment could net him billions.

"There have been attempts to settle but the offers have been totally inadequate," said his attorney, Bill Durkee of Houston.

Until several months ago, the lawsuits were consolidated into one, but U.S. District Judge Avern Cohn ruled that was too unwieldly. He picked Ford Motor Co. as the bellwether to begin disposal.

For Kearns, that was a logical choice. In 1963, he showed Ford a year-old Galaxie on which he had installed electronic-based intermittent wipers.

Ford told him it was working on its own version of pneumatic-based intermittent wipers. A year later, says Kearns, Ford again asked to see his invention.

Kearns says he got the idea for a "windshield wiper that blinks" after losing the sight in one eye.

"You begin focusing on your eyes when you've been blinded," he said. "Your eyelids blink. I developed controls that make windshield wipers blink."

Kearns says the automakers seized upon an incident involving him to delay trial of the lawsuits.

In 1983, Kearns asked for a summary judgment and produced some highly confidential documents obtained from lawyers representing Porsche, Mercedes-Benz and another German automotive company. Some of them discussed the validity of Kearns' patents.

But his son, Dennis, received them illegally from a paralegal he dated for eight months who worked for the defense counsel's law firm.

A federal judge ruled against Kearns, fined him $10,000 and awarded attorney fees to the defendants for his actions.

As a result, many of the records are suppressed by the court. Durkee said he and his client also are under a gag order not to discuss certain aspects of the case.

The last of the seven patents Kearns held on intermittent wipers expired in 1988. Still, Durkee says his client is entitled to royalties for the years of alleged infringement.

Six of the patents are involved in the Ford litigation. "Ford may have patents on intermittent wipers, but they don't cover what is being used commercially," said Durkee.

Ford declined to comment in advance of the trial.

Kearns said there has been an emotional toll on him and his family. At one point, he had a nervous breakdown. And Durkee is not the first attorney to handle the suit.

With a divorce pending, Kearns spends much of his time in Houston working on the lawsuit.

"I was 35 years old when it started," he said. "I had stars in my eyes. I wanted to be the owner of a small plant . . . employ people and contribute to the economy."

He still wants to be a supplier to the automakers. "I devoted my life to this," he said.

Kearns also has hopes of changing patent law to better protect inventors.

"If I settled with the automakers, there would be no advance in the law," he said.

He wants courts to have the power to extend patents if holders are involved in lengthy litigation but have pursued patent-infringements diligently.

"A patent is presumed valid when an inventor gets it," he said. "Then the inventor has to go to court, and the process takes a lot of years without a decision on whether it is valid.

"One arm of the government gives you a piece of paper but before the judicial system decides if it is valid, it expires and the government takes it away."

Critics also ask why it took him so long to file the lawsuits. Said Durkee: "It's hard on an individual going up against a big company. He was trying to get a supply contract. He went around for years showing his designs, and litigation is expensive. It just took a while."

Mexico's Beetle boom spurs huge output hike

By Stephen Downer
STAFF CORRESPONDENT

MEXICO CITY — Demand in Mexico for the newly discounted VW Beetle has surged to the point that Volkswagen de Mexico is planning a fivefold increase in production next year.

Last month, VW slashed the price of the car 20 percent in response to a government tax-cut plan.

The company had expected more demand for the Bug — which now sells for $5,500 — but nothing like the demand it has seen so far.

"There has been an incredible rush," said President Martin Josephi in an interview. "Our dealers have told me that they have never had a situation like this."

VW built 21,000 Beetles last year at its plant in Puebla, the world's only remaining production site of the no-frills vehicle. Through the first half of this year, it built 13,341. The company plans to turn out 100,000 next year.

When VW announced the Beetle's new price in early August, it had less than a three-week stock. It ran newspaper ads apologizing for its inability to satisfy demand.

But starting today, VW will add a second shift for the Beetle, and it will add a third shift early next year, Josephi said.

The firm will invest $20 million in the "rejuvenated Beetle" project. "We need to retool some of our suppliers and make some adaptations to the plant," said Josephi.

That's a big investment, he added, "when you consider that the Beetle has been produced in Mexico since 1964."

As a result of the increased output, the VW plant will work at full capacity for next year for the first time in a decade, Josephi said.

The Puebla plant also produces the Golf, Jetta and the Type 2 van and minibus.

The plant is expected to turn out 220,000 vehicles in 1990, compared with 60,000 last year and 38,579 through the first half of 1989.

VW began exporting the Golf to the United States and Canada in January and had shipped about 12,000 by early September.

Mexico's Beetle is little changed from this 1972 model.

Jetta exports to the same markets started in June. More than 4,000 have been shipped.

Total exports of the two models are expected to reach 30,000 this year and 70,000 next year, divided almost equally between Golfs and Jettas, Josephi said.

Volkswagen of America had built the cars until last year, when it closed its plant in Westmoreland, Pa.

Josephi said one reason VW can sell the Beetle at a reduced price is the government's decision to waive sale taxes and import duties on parts for certain vehicles.

The move was aimed at stimulating the economy and promoting demand for cars that will displace heavily polluting older vehicles.

VW's move has not been matched by any of its domestic competitors — Ford, Nissan, Chrysler and General Motors.

"Of course we are interested in gaining as large a market share as possible, and I am quite confident that, without mentioning a figure, by the end of next year we will have improved our market share by several points," Josephi said.

According to VW statistics, the company led the market in August with a 30.8 percent share.

Asked how he expects Nissan, the previous market leader, to react, Josephi said: "I don't see that they have many possibilities of recovering lost ground. Their plant in Cuernavaca has no spare capacity. They are talking of building a new plant in Aguascalientes, but that will take them at least two years."

Meissner quits high Hyundai job

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

GARDEN GROVE, Calif. — The top sales executive at Hyundai Motor America resigned last week to become a partner in a Denver dealer group.

Art Meissner, group vice president of sales, distribution and import, is the second senior Hyundai official to resign in two months. Executive Vice President Max Jamiesson left the company in July to become a Hyundai dealer.

A Hyundai spokeswoman said Meissner's resignation was not related to Hyundai's 21 percent sales decline for the first eight months of this year.

Meissner submitted his resignation the week Jamiesson quit, but Hyundai officials convinced Meissner to stay. They promoted him to group vice president from vice president and national manager of sales.

Meissner will join megadealer Mel Nelson in Denver. The group includes a Hyundai store.

Meissner's duties will be assumed by Jack Collins, vice president of marketing, while Hyundai searches for a replacement.

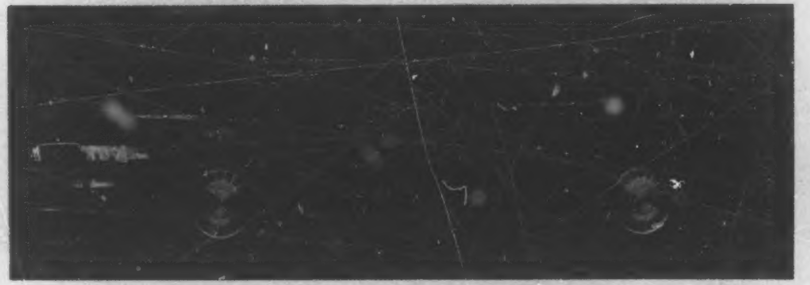
Honda introduces 5-cylinder Accord for home market

TOKYO — While Honda unveiled the new Accord at the Frankfurt auto show, the Japanese company released details of the 5-cylinder version, which it says will be limited to the Japanese market.

The Accord Inspire and Vigor will offer what Honda calls the world's first front-drive/midship layout for a 5-cylinder engine. The 2-liter single-cam engine, north-south mounted, has a 35-degree slant. The transmission, located behind the engine, drives the front wheels. By contrast, the 4-cylinder Accord has transverse engine mounting.

The 5-cylinder's center of gravity is behind the front axle to provide better balance and to avoid the need to put too much weight on the front end, Honda said.



Honda's Accord Inspire adopts a front-drive/midship layout for its 5-cylinder engine.

Honda developed the 5-cylinder specifically for the Japanese market, according to Senior Managing Director Nobuhiko Kawamoto. It is not destined for export, although Honda will consider other possibilities if it is successful in Japan, he said.

Honda developed the 5-cylinders in order to better target the popular upscale 2-liter compact segment, where Toyota and Nissan have been locked in an intense battle for the past year. Until now, Honda had no specific models for that category.

The new engine, according to Kawamoto, is well-balanced, smooth, light, compact and appropriate to the market segment — all at a lower cost to the company.

News reports in Japan have criticized the new Accord, citing it for a lack of distinctive styling.

While other company presidents were attending the Frankfurt show, Honda President Tadashi Kume stayed home to oversee the new-model presentation in Japan, underscoring Honda's need to strengthen its position in the expanding domestic market.

Financially weaker Jaguar aims at domestics for 1990

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

VERGENNES, Vt. — Jaguar has launched its 1990 marketing strategy, aiming it primarily at domestic luxury cars, which it regards as a greater threat than Lexus and Infiniti.

Meanwhile, the parent company in England reported a slim pre-tax profit for the first six months of 1989, citing lower U.S. sales, adverse exchange rates and an earlier strike.

It is now conceivable that Jaguar could record a loss for the full 12 months before bouncing back to a healthy profit in 1990 as it benefits from a weaker U.S. dollar and stronger sales of the new XJ6.

Commenting on the new U.S. marketing strategy, Michael H. Dale, senior vice president for sales and marketing, Jaguar Cars, said, "The price gap against the domestics has been a major source of our growth. The relationship with Cadillac has been an absolutely key thing."

Jaguar's 1990 plan introduces a stripped version of the XJ6 sedan at $39,700, which represents "a dramatically changed relationship with Cadillac," Dale said. The 1989 XJ6 starts at $44,000.

At the same time, Jaguar is adding a 4-liter six-cylinder engine — up from 3.6 liters — to its entire sedan line-up. Other changes include a new transmission and digital engine management.

Two new nameplates, Sovereign and Vanden Plas Majestic, are added for 1990, expanding the sedan line-up from two to four trim levels.

The XJ6 has no sunroof or hydraulic suspension. The $43,000 Sovreign has a level of trim similar to the 1989 XJ6. The Vanden Plas remains unchanged at $48,000. The Vanden Plas Majestic, with a flashy red color scheme, tops the line at $53,000.

Dale said Jaguar's 1989 sales should approach 20,000, which would require a substantial sales increase for the rest of year. Sales through August were 12,400, down 5 percent from the 1988 period.

Dale predicted sales of 23,000 to 24,000 for 1990 provided the factory can build enough cars.

He said 1990 pricing, together with the strength of Jaguar's image for styling, prestige and exclusivity, will be a sufficient temporary defense against the new Japanese entries.

"They already have a good image of quality and a good image of the price/value relationship. There isn't any reason to believe that given time, such companies won't be able to take on some of the other images. But in the short term, image is very much in favor of the Europeans," Dale said.

The Lexus LS4000 is priced from $35,000 to $39,400. The Infiniti Q45, which will be officially launched in November, is expected to run from $37,500 to $40,000.

Jaguar's 1990 pricing strategy will cut dealer gross margins from about 21 percent to 18 percent on the XJ-S coupe and the Sovreign, and to about 20 percent on the other models.

He said dealers have been forced to discount 1989 models, so dealer grosses should improve in 1990. Dale said dealers actually made about $1,000 more per car in 1986, when the margin was 18 percent, than they did at a 21 percent margin in 1989.

Dale said Jaguar has no plans to adopt rebates for 1990, though a $5,000 rebate to Jaguar owners who bought a new Jaguar helped sell out remaining 1989 models in the past few months.

Jaguar sales in the United States had considerable impact on parent company financial results. First half pre-tax profits at Jaguar PLC slumped to £1.4 million ($2.2 million) compared with £22.5 million for first-half 1988.

Stephen Reitman, motor industry analyst with stockbroker Phillips & Drew, has revised downward a forecast for 1989 profits and now expects Jaguar to return a small pre-tax loss of £5 million ($7.7 million).

Reitman predicts a strong earnings recovery in 1990.

"The half year results are of academic interest only but they highlight Jaguar's vulnerability and make it harder to justify the company's independence," he said.

London investors interpreted the figures as improving the chances of a takeover at Jaguar when the government's protection expires at the end of 1990, and shares rose from £3.97 to £4.17.

Automotive News Staff Correspondent Daniel Ward in London contributed to this report.

Rover profits overcome U.S. drag

LONDON — Despite continuing losses at Sterling Motor Cars in the United States, Rover Group improved its operating profit in the first half of the year to £27 million ($43 million), compared with £10 million for the same period in 1988.

George Simpson, group managing director, said the U.S. market did not help the financial results but Sterling's losses have been reduced and the "fundamentals" of the U.S. business are now right. Simpson expects Sterling sales in the United States to reach 5,000 in 1989 compared with 8,899 in 1988. The sales total was 14,171 in 1987.

Commenting on the improvement in profit, Simpson said, "I think we have been pretty successful. The results have to be judged in the context of Rover not having many new models."

He emphasized that Rover is now at the lowest point in its new-model cycle and product launches in the next six months will boost the company. Last week, Land Rover unveiled the Discovery at the Frankfurt auto show, and in October, Rover will debut its version of the Honda Concerto. The high-volume Metro will be replaced early next year.

Sales dip 12%; cars, trucks off in short period

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Following one of the strongest sales months of the year, automakers reported that deliveries of U.S.-built car and light-truck for Sept. 1-10 slumped 12.39 percent below last year's period.

Sales declined for both cars and trucks in early September.

The 1989 period had one less selling day. As a result, the average daily selling rate was up 0.12 percent this year.

In early September, 212,334 U.S.-built cars and light trucks were sold, down from last year's 242,368.

GM reported the smallest drop — 3.07 percent — in combined car and light-truck sales. Chrysler Motors' combined sales slipped 13.00 percent, and Ford Motor Co. sold 19.78 percent fewer U.S.-built vehicles in the period.

Nissan's sales of U.S.-assembled cars and trucks plummeted 78.73 percent. Dealer incentives on Sentras and trucks expired Sept. 5.

Deliveries of U.S.-built cars in early September totaled 132,004, a decline of 14.91 percent from last year's 155,131. The daily selling rate fell only 2.75 percent in this year's shorter period.

The daily selling rate for light trucks rose 5.24 percent, although total sales were down. The four light-truck makers sold 80,330 units, down 7.92 percent from last year's 87,237.

Toyota and Mazda were the only carmakers to report gains.

Toyota's sales of U.S.-built cars more than doubled in this year's 10-day period. Toyota was building only Corollas in this country at this time last year — its Camry plant had not begun production.

Mazda sold three more cars this year than last.

On the other hand, Honda's sales of U.S.-built cars dropped 43.98 percent. Model changeover at Honda's Ohio plant cut its supply of cars. Nissan's sales of U.S.-made Sentras fell 81.73 percent.

Each of the Big 3 sold fewer cars in early September, with Ford down 18.26 percent. But Ford reported the leanest supply of U.S.-built cars on Sept. 1.

Chrysler delivered 6.63 percent fewer domestic cars, although Plymouth deliveries climbed 26.92 percent.

GM sold 10.98 percent fewer cars in the period, but its daily selling rate edged up 1.74 percent because of one less selling day in this year's early-September period.

GM was the only one of the four light-truck makers to report an increase. Its sales rose 14.20 percent. Ford reported a 21.93 percent loss, and Chrysler's light-truck sales dropped 19.79 percent. Nissan sold 75.58 percent fewer trucks this year.

Calif. to require diagnostic gear for new cars

The California Air Resources Board has approved regulations requiring new cars to carry sophisticated diagnostic systems that will alert drivers when their cars have pollution problems.

The systems will be phased in on new cars between 1994 and 1996. They will monitor components under the hood that affect tailpipe emissions and fuel vapor emissions. Drivers will be alerted by a dashboard warning light. The system will also measure the level of chlorofluorocarbon coolant in the air conditioner. Leaking coolant is suspected of causing erosion of the earth's ozone layer.

The board said the computers are expected to cut total hydrocarbon and nitrogen-oxide emissions by 222 tons per day by 2010.

The move was supported by the EPA and Porsche Cars North America. EPA wants to establish a national standard, and Porsche is interested in an international standard.

Automakers have already developed many components for a standardized emissions diagnostic system, but the entire package does not yet exist.

Eight Northeastern states that intend to adopt California emissions regulations could also adopt the California requirement.

Jobs One and Two from Subaru-Isuzu
Workers at Subaru-Isuzu Automotive in Lafayette, Ind., celebrated last week's production start of the Subaru Legacy and Isuzu pickup.

Saab idles 45, splits region

By Jim Henry
AUTOMOTIVE NEWS STAFF REPORTER

NEW YORK — Slumping sales prompted Saab-Scania of America to lay off 45 employees last week and announce the creation of a new regional organization.

Layoffs and jobs lost through a previous early retirement program have reduced Saab's U.S. work force by about 15 percent in the last month.

President Robert J. Sinclair said further cuts were necessary after only 38 of 58 eligible employees signed up for the early retirement offer. Saab-Scania of America now employs about 440 people at its Orange, Conn., headquarters and in regional offices.

Saab sold 23,634 cars through August, down about 12 percent from the same period in 1988.

Under the new structure, which is intended to bolster support to dealers, the company's Eastern region has been split. The territory now will be covered by a Mid-Atlantic region — covering metropolitan New York, New Jersey, Pennsylvania and Virginia — and a Northeast region, including upstate New York and New England. Saab's Southern, Central and Western regions were not changed.

Earlier this month, Volvo North America Corp. offered early retirement to approximately 80 employees. About one-tenth of the company's 800 workers qualify. Most work at Volvo Cars of North America in Rockleigh, N.J.

A spokesman said the program will not reduce Volvo's work force.

Soviets buy LadaCanada, seek parts help

By Alex Law
STAFF CORRESPONDENT

Top Soviet auto industry officials were in Canada last week to announce the purchase of LadaCanada Inc. They also discussed joint ventures with North American industry officials to expand Soviet auto making capacity.

Nikolai Pugin, minister of automotive and farm machinery industries, and Yevgeny Lyubinsky, general manager of Avtoexport, said the purchase of LadaCanada was aimed at expanding sales and dealer representation in the country. The plans center around the Samara sedan and Niva utility.

Current management under John Wright will stay in place.

Pugin confirmed meetings with Magna International and General Motors of Canada.

He said the possibility of shipping Canadian-built automatic transmissions to the Soviet Union was discussed at a meeting with Roger B. Smith, GM chairman.

Any Canadian joint venture would be part of Soviet plans to expand car making capacity from the current 1.3 million to 5 million by the year 2000, Pugin said.

Ig-Lo Products adopts program to lessen CFC-12 problem

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

CHICAGO — A five-point program to promote responsible and conservative use of automotive air-conditioning chlorofluorocarbon (CFC-12) refrigerant sold in small cans has been announced by Ig-Lo Products of Lexington, Ky., one of the largest refrigerant marketers.

Speaking at the Automotive Parts and Accessories Association's trade show here, Hoyt B. Wilder, Ig-Lo Products president, said the program is being developed in response to emerging market data concerning can use of CFC-12 and the company's concern and commitment to protecting the environment.

Scientists believe CFC-12, like other CFCs, destroys the ozone layer that protects the earth from ultraviolet radiation, which contributes to a global warming trend or the greenhouse effect.

Wilder said Ig-Lo will no longer package automotive refrigerant in 14-ounce cans, but will package the product in 12-ounce cans as of Oct. 1.

Switching to the 12-ounce can, according to Wilder, will reduce the small residue of CFC-12 remaining in the can and the opportunity for waste or misuse and the risk of overfilling the air conditioning system.

The move is also accelerated by legislation being proposed and, in some states already enacted, to ban sales of the refrigerant in 14-ounce cans.

Under the program, which begins Jan. 1, 1991, Ig-Lo no longer will offer refrigerant in inexpensive kits, and will begin marketing components in deluxe diagnostic kits. The kits, which will cost substantially more than those currently sold, will include refrigerant, gauges, dye and other components that will promote proper usage, according to Wilder.

The program also calls for Ig-Lo, in association with Draf Industries, to begin producing and marketing a line of CFC-12 reclamation and recycling units for service centers. The machine, the Ig-Lo/Draf 1400, is undergoing tests by Underwriters Laboratories.

The fourth point in the program, Wilder said, involves the "application for a patent to develop a line of recycling units that use inexpensive accumulator bags, which are targeted toward do-it-yourselfers and small service station users." The bags would permit the users to capture vented CFCs and transport them to a recycling center, Wilder said. A prototype system is in the development stage, he added.

Finally, Ig-Lo will invest $1 million in a program designed to educate do-it-yourselfers and the service sector about the proper methods of using, reclaiming and recycling CFC-12, Wilder said.

"Ultimately, we hope this program will help move the marketplace toward less dependence upon CFC-12 in particular, and toward a gradual and total phaseout of this harmful chemical," he said.

In undertaking the program, Wilder said there is nothing wrong with the 14-ounce can, and cited an EPA report that showed the can is responsible for less than 2 percent of all CFC-12 emissions.

"What we are concerned about," he said, "is not the can, but the contents and how they are handled."

He mentioned venting of used CFCs into the atmosphere by professionals as a reason for Ig-Lo's educational initiative and development of recycling machines.

As part of the Montreal Protocol, an agreement signed by the United States in partnership with nearly 40 other nations, the EPA has ordered a 50 percent reduction in CFC production by 1998. The United States also has formally agreed with 12 European countries to phase out the production of CFCs completely by 2000.

Companies in the chemical industry are developing and testing non-CFC substitutes, as well as low-CFC blends that may be used as transitional coolants, with alternatives expected to become available within a few years.

Automakers also have begun redesigning their vehicles to accommodate larger air conditioners that will be needed to accept the new blends and substitutes when they become available.

UL approves first CFC recyclers

NORTHBROOK, Ill. — Underwriters Laboratories has approved the first equipment that will recycle the ozone-depleting refrigerant chlorofluorocarbon (CFC-12) found in automotive air conditioners.

The first companies to receive Underwriters Laboratories' listings are Murray Corp., Cockeysville, Md.; White Industries, a division of K-Whit Tools, Indianapolis; and Robinair, a division of SPX Corp., Montpelier, Ohio. The Robinair models 17300 and 17350 also will be distributed through three other SPX units — Kent-Moore, OTC and Bear Automotive.

According to Don Grob, manager of Underwriters Laboratories' heating, air conditioning and refrigeration department, the listings represent a milestone in efforts to prevent the release of CFCs into the atmosphere.

Stephen Andersen, chief of the technology and economics branch of EPA's global division, added, "This is a major breakthrough. Finally, there's something that automobile dealerships, service stations and consumers can do to have a direct and dramatic impact on protecting the earth's ozone layer.

"In fact, use of the Undewrwriters Laboratories listed equipment will provide the greatest single reduction to date of CFC-12 emissions into the atmosphere."

Andersen said almost every vehicle maker in the world has endorsed the use of Underwriters Laboratories' listed recycling equipment, and they are authorizing the use of recycled CFC-12 under new-car warranties.

With the availibilty of these units and the others expected to be listed in the future, analysts predict the industry will be able to contain more than 60 percent of CFC-12 emissions now being released into the atmosphere.

Ford chief visits co-op training school

Donald Petersen, center, chairman of Ford Motor Co., visits Cerritos College in Norwalk, Calif., and hears from Sal Nunez, right, a second-yaar automotive service student. The cooperative program uses Ford training technology and equipment. The program aims to ease the shortage of trained technicians at area dealerships. At left is Tony Baron, chairman of the college's automotive technology department.

FDA claims dealers lose $19.17 per warranty job

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. dealers are losing $19.17 per repair order on warranty work, according to a survey by the Ford Dealers Alliance.

"Our pilot study supports what any good automotive man knows — warranty is a loser," said Ed Mullane, president of the group.

He said the survey revealed that to comply with laws in the five states that require warranty reimbursement at retail levels, Ford would have to increase labor remuneration 52 percent and reimburse dealers $9.32 per repair order for paperwork.

Mike Parris, a spokesman for Ford parts and service division, defended Ford Motor's policy.

"What we try to do is pay for warranty repairs at levels that are fair, reasonable and competitive," Parris said. "We haven't received any complaints from our dealers."

"We're talking about operating profit and loss," Mullane said. "That's Ford Motor's term for what's left of the gross after selling expenses, fixed expenses and dealer salary are taken out.

"Moreover, this loss on warranty work is not offset by profit on retail paid repair orders — far from it," Mullane said. "The dealer operating profit on retail work is barely $2.95 per repair order.

"The fact that retail paid repairs are only marginally profitable backs up the wisdom of state legislation requiring factories to pay at least that much for warranty work."

The survey was based on 11-month figures from 1988 financial statements from 47 Ford and Lincoln-Mercury dealerships in 14 states.

FORD DEALER PROFITABILITY PER REPAIR ORDER

	Parts	Service	Combined

SERVICE INDEX
103.7*

	July '89 vs. July '88	Jan.-July '89 vs. Jan.-July '88
Gross Profit on All Labor and P&A Sales	+6.9%	+4.3%
Repair Orders Written	−0.4%	−2.1%
Total Labor Sales (Customer & Warranty)	+1.6%	+3.5%
Shop Parts Sales (Customer & Warranty)	+4.6%	+3.1%
Sales of All P&A	+2.7%	+1.6%

* Survey by Automotive News shows that dealers' service and parts business in July 1989 was 103.7 percent of business in July 1988. Service business in the first 7 months of 1989 was 102.8 percent of business in the corresponding period in 1988.

Dealers' service business grows

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business in the shops of new-car dealerships topped year-ago volume in July and for the first seven months of the year, according to the Automotive News Service Index.

July's shop business rose 3.7 percent over that in July 1988, and January-July volume was 2.8 over the comparable period a year ago.

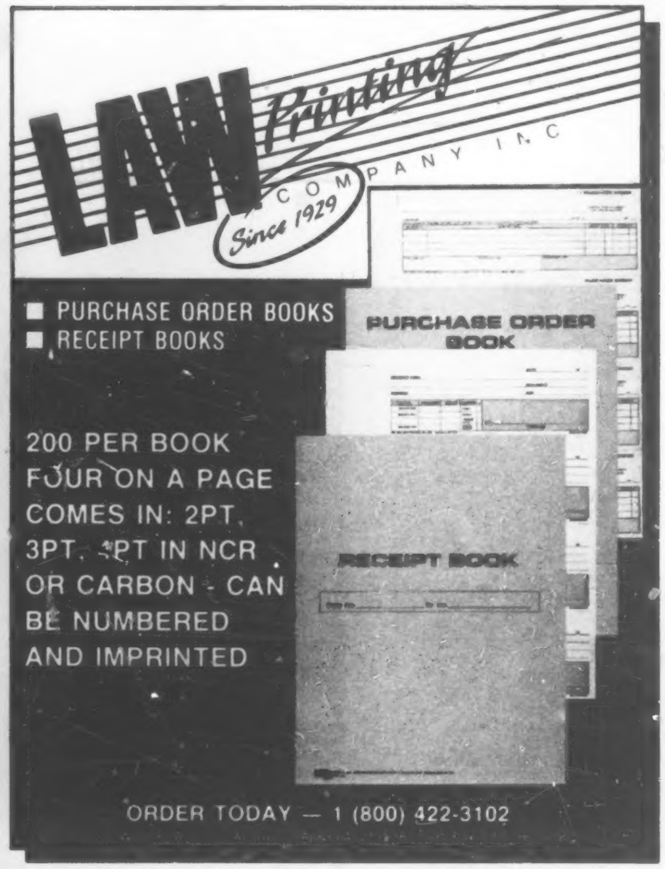
The Service Index is compiled from figures on parts and service business supplied by a cross-section of the nation's dealerships.

All indicators in the index, except repair orders written, were up in July and for the year-to-date. Repair orders in July dipped 0.4 percent from last year's, and year-to-date orders fell 2.1 percent.

Still, gross profit on all labor, parts and accessories sales was up 6.9 percent for July and 4.3 percent for the first seven months, the biggest gains recorded this year.

Total labor sales (customer paid and warranty) were up 1.6 percent in July and 3.5 percent for the year-to-date, while sales of all parts and accessories rose 2.7 percent and 1.6 percent, respectively.

Shop parts sales (customer-paid and warranty) in July were up 4.6 percent over July 1988, and the January-July sales were up 3.1 percent over the year-ago volume.



Strong sales cut stocks; Sept. 1 supply is 56 days

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Stellar August new-car sales, stimulated by record rebates and growing consumer awareness of 1990-model price hikes, pared Sept. 1 inventories to a lean 56-day supply.

Combined U.S.-built and imported car stocks were reduced by about 186,000 units or 8.40 percent during August. The total was 2,034,674 on Sept. 1. A month earlier, there were 2,221,380 unsold cars, equal to a 65-day supply.

Inventories are in excellent shape, according to Michael Luckey of Luckey Consulting Group in Cresskill, N.J. But he cautioned that the August performance pulled sales from the next quarter, which already has a sharply reduced production schedule by the Big 3.

The Sept. 1 stockpile of U.S.-built and import cars was in line with what most dealers planned.

"We try to keep it around or under 60 days now," said Kevin Mizi, general manager of Ridge Motors Pontiac in Des Plaines, Ill., and president of O'Hare Hyundai.

Another dealer who agreed that stocks must be carefully controlled was Craig A. Kapson, president of Jordan Group (Ford-Lincoln-Mercury-Toyota-Volvo-Mitsubishi) in Mishawaka, Ind. "We're getting inventories down lower," he said. "I'm hoping to send a message to the manufacturers. We won't stock what we used to stock unless they come out with different programs for floorplanning."

Opening September with the lowest days' supply in 1989, U.S. carmakers had 1,449,478 unsold cars, representing a slim 57 days. That was almost 116,000, or 7.40 percent, fewer than the 1,565,308 units on hand Aug. 1 when the supply was a nearly ideal 65 days.

Import-car stocks dropped by about 61,000 units or 9.42 percent in August. Stocks fell to 585,196, compared to 646,072 at the beginning of the month. Days' supply dipped to 55 from 67.

All eight U.S. automakers reported reduced inventories and days' supplies on Sept. 1. Each of the Big 3 had lower inventories of captive and U.S.-built cars.

Ford Motor Co. shaved its domestic and captive car stocks to 457,000 to begin September with a 57-day supply. The Aug. 1 total was 485,000, or 62 days.

General Motors deflated its combined car stocks by 9.87 percent to 771,762, a 66-day supply. The Aug. 1 figures were 856,268 and 73 days.

Combined car stocks for Chrysler Motors dropped 6.77 percent to 244,796, for a 67-day supply. A month earlier, the totals were 262,592 and 83 days.

Among the Japanese makers with transplant operations, Honda reported the slimmest stocks. It trimmed its import and transplant supply 21.96 percent to 49,759 cars, a 21-day supply.

Toyota lowered its combined inventory of unsold cars by only 587 units to 90,496, but strong August sales reduced stocks to a 28-day supply from 41 on Aug. 1.

Laser and Eclipse win industrial design award

MINNEAPOLIS — The Plymouth Laser and Mitsubishi Eclipse have received the 1989 Industrial Design Excellence Award for Transportation from the Industrial Design Society of America.

The coupes share the same body shape and are built by Diamond-Star Motors, a joint venture of Chrysler Motors and Mitsubishi Motors.

"We felt the Plymouth Laser and Mitsubishi Eclipse make a significant contribution to the reputation of U.S. design," said Jack K. Beduhn, chairman of the judging.

The vehicle's initial design development was done at Chrysler Pacifica, Chrysler's advanced design facility in Carlsbad, Calif. Following concept approval, the design work was handled by Chrysler's advance and international studios.

Vehicles rated by insurance claims

WASHINGTON — The Highway Loss Data Institute has released its projections of the likelihood of injury and vehicle damage insurance claims for the 200 most popular U.S. cars and vans.

The ratings, listed below, are based on an analysis of insurance claims.

LOSS EXPERIENCE

Results from 1986-88 cars involved in collisions. Injury figures are based on frequency of claims; collision figures are based on value of claims. Numbers are relative: 100 is average, figures below that are better than average.

GE Capital names McNeely president

GE Capital Auto Financial Services, Barrington, Ill., has named Stephan A. McNeely president of its auto auction division, succeeding Mike Zafirovski, who was promoted to the company's fleet services division last month.

McNeely was previously president and chief operating officer of Tenneco's Automotive Retail Services, where he led the company's retail and franchise operations in the United States and Canada.

"GE Capital's expertise in financial and distribution systems are a natural fit with the auction industry," said McNeely. "It's our plan to improve the economic vigor of the wholesale market."

Zafirovski built the company into 18 auctions nationwide beginning in 1986. It now remarkets more than 15,000 vehicles weekly.

Tenneco Automotive, Lincolnshire, Ill., is a supplier of shock absorbers, exhaust systems and brake products.

AUCTION BRIEFS

CHARLES THOMAS

Consultant hired

ServNet has hired Donald B. Fowler of Performance Remarketing Specialists as a consultant to develop the sales and marketing activities of the one-year-old independent auto auction network.

He was formerly vice president of national sales for GE Capital Auto Auctions, Barrington, Ill.

"I'm approaching ServNet's sales and marketing efforts with the idea of familiarizing the major remarketing accounts with the strategic advantages of the ServNet auctions," he said.

Performance Remarketing Specialists is also in Barrington.

ServNet was formed in 1988 as a cooperative marketing network of independent auto auctions.

It promotes independent ownership and operation of auctions — as opposed to chain auctions — on a national level.

Ten auctions participate in the organization.

GM picks Columbus

General Motors has selected Columbus Fair Auto Auction, Columbus, Ohio, for a regular closed factory sale for its dealers. The auction will offer more than 500 units at each sale.

Wanted: managers

Because qualified auction managers are in short supply, Anglo American Auto Auctions has launched its own training program.

"The auto auction industry has grown dramatically," said Michael Richardson, president of Anglo American. "The surge is expected to continue with total sales increasing to eight million cars in 1989, up from six million in 1988."

He said the industry needs managers with experience in attracting cars from diverse industry segments, providing security, reconditioning vehicles, supervising auctioneers, servicing dealer needs, directing vehicle transport and managing up to 200 employees.

"In-house training is the only way to get the quality managerial talent we need," said Richardson.

Anglo's program consists of recruiting and screening applicants, selecting candidates, training and evaluating their progress and placing them where needed within the national network.

The company's first management class will complete its training in mid-1990. At that time, each trainee will have logged 3,700 hours of training over a two-year period.

They will have worked on-site in every phase of auction operations including vehicle registration, security, reconditioning, sale-day lot management, auctioneering, vehicle transportation, dealer relations, manufacturer and fleet-lease relations, clerical and administrative and overall auction management.

The company says it has spent nearly $1 million to recruit, train and graduate its first class.

Dealers in the fast lane

Brasher's Sacramento Auto Auction, Rio Linda, Calif., has started a dealer express lane that accommodates up to 250 vehicles, running in blocks of eight or more vehicles for each consigning dealer.

"We geared the express lane for dealers who don't have the time to spend all day long at the auction selling cars," said Rex Roden, general manager of the auction.

"A dealer with a number of cars to sell can call the auction in advance to reserve a block of numbers," he added. "That way, he knows when his cars are being sold, and once they have sold, he's free to buy other cars at the auction or get back to his business."

The auction now has seven lanes, including the dealer express.

Sept. 28 — Dallas Auto Auction, Grand Prairie, Texas

Model-year breakdown

PRODUCTION

Truck output rises despite Ford cutback

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Slow sales caused Ford Motor Co. to idle three truck assembly plants last week. Those plants produce about 12,000 units a week on a regular schedule, but output has been lower than that in recent weeks.

A parts shortage was the culprit at another Ford truck plant that is scheduled to shut down today. That will cost the company about 3,000 units this week.

General Motors and Chrysler Motors increased their truck output last week, making up for the units lost in the Ford closings.

Last week's targeted truck build was 73,145, 7.78 percent more than the 67,865 assembled the previous week, but 18.30 percent below the year-ago week's 89,524.

Car production was scheduled at 140,528, 29.91 percent above the previous week's 108,175 but 3.28 percent short of the year-ago week's 145,293.

Estimated car production last week was split as follows: GM, 47.92 percent; Ford Motor, 22.34 percent; Chrysler Motors, 13.24 percent; Honda of America Manufacturing, 4.67 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.04 percent; Toyota Motor Manufacturing U.S.A., 2.68 percent; New United Motor Manufacturing Inc., 2.21 percent; Diamond-Star Motors, 2.11 percent; and Nissan Motor Manufacturing Corp. U.S.A., 1.79 percent.

Ford's two truck plants in Louisville, Ky., and its Lorain, Ohio, truck facility were closed last week because of high inventories. They are expected to return today.

The company will idle its Wayne, Mich., truck plant today because of a parts shortage.

Ford's Dearborn, Mich., car plant is expected to resume operations today after being closed for one week because of a shortage of Mustang parts.

Chrysler shut down the Grand Wagoneer line at its Toledo, Ohio, plant last week because of high inventory. It is slated to resume production Sept. 25.

GM confirmed last week that it will idle its Lakewood, Ga., plant in mid-March 1990, because no future product is available for the facility. The plant makes rear-drive B-body cars — Chevrolet Caprice sedans and wagons and full-sized Buick and Oldsmobile wagons. Those models will be moved to the Willow Run, Mich., plant.

Car build jumps 38% in Canada

Auto production in Canada was scheduled at 20,883 last week, 38.79 percent more than the prior week's 15,047 and 0.88 percent more than last year's 20,701.

Truck output was targeted at 20,641 units last week, 22.75 percent above the previous week's 16,815 but 3.18 percent below the year-ago week's 21,320.

Chrysler Motors' Bramalea, Ontario, plant, which was slated to reopen last week, remains idle due to slow sales of Premier.

Audi plans to cut 100 U.S. dealers

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

TROY, Mich. — Audi of America will tell its 365 dealers at its annual sales meeting in Dallas this week that it plans to eliminate up to 100 "non-performing dealers" by 1992. Audi may decide to leave some of those points open.

The purge is not an idle threat, according to Audi.

"We want to get rid of these players because they're depreciating the value (of the Audi franchise)," said Richard L. Mugg, vice president of Volkswagen of America in charge of Audi of America. "It's nothing personal. We'll just tell them to give us back our signs and parts, and we'll have a straightforward parting."

How straightforward it will be to strip Audi franchises based on non-performance remains untested, but when Audi rids itself of the dead-weight dealers, it will have support from its strong national dealer advisory council.

AUTOMOTIVE NEWS/JOE WILSSENS

Richard L. Mugg

"We can only afford to have a dealer on board who will positively project the image of Audi," said Wolfgang Rietzl of Rietzl Audi in Norwell, Mass., the council's Northeast representative. "(These dealers are) not good for the franchise, not good for other dealers and not good for the customer."

The move reflects increasing confidence by Audi in the franchise's apparent revitalization, a confidence that will be played up during the dealer meeting.

Also on the Dallas agenda is a plan to keep good salesmen in the Audi franchise system with a long-term bonus program, an outline of current and future incentive plans and an introduction to Audi's 1990 advertising campaign.

Unlike other dealer meetings where the company showed off future products, Mugg said no new products will be on hand.

He said Audi's 365 dealers can

Chrysler works on small car

Big mpg needed if CAFE rises

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Motors is accelerating development of a new small-car platform and has abandoned its strategy of using a built-up import as an entry-level vehicle because of mounting government pressure for fuel-efficient fleets.

Chrysler's development of a small-car platform is one of several alternatives under study as the company anticipates corporate average fuel economy standards of about 30 mpg by 1995.

The company is also investigating producing a small car in a joint venture with its partner Mitsubishi Motors, and it is studying the possibility of deriving a car from the JJ small sport-utility-vehicle platform that is being developed with Renault.

Chrysler must produce a small car with 75 percent North-American content in order to use the fuel-efficient vehicle to meet anticipated increases in CAFE standards for domestic-car fleets.

Chrysler Motors President Robert Lutz confirmed that the company is accelerating engineering

Chrysler exec Robert S. Miller called the sale "a good business decision."

Chrysler trims Mitsubishi stake

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. will use the $310 million raised from the sale of some of its stock in Mitsubishi Motors Corp. to provide a cash cushion for the programs on its corporate agenda.

But Chrysler executives insist the company's decision to reduce its financial holding in Mitsubishi will not affect Chrysler's commercial relationship with its Japanese partner.

Chrysler said Friday it would reduce its stake in Mitsubishi from 21.8 percent to 12.1 percent.

Wall Street analysts recently have been urging Chrysler to make such a sale as Mitsubishi stock rose

Incentives greet 1990 models

Dodge trucks carry rebates; GM ties cash to option packages

By Michelle Krebs and Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTERS

DETROIT — Domestic automakers are starting the new model year with a bang by offering opening-day incentives on 1990 models in an effort to avoid the dismal fourth quarter that some analysts have forecasted.

General Motors announced incentives on some 1990 vehicles Friday and also scheduled downtime at six assembly plants.

GM's 1990 incentives include low-interest financing and rebates.

David E. Lahti, Oldsmobile general sales and service manager, said the incentives are to provide a "blockbuster beginning" to the new model year, which starts Thursday for GM.

Most finance rates on are higher than those in GM's "Big Easy" cleanup program, which expires Wednesday. They are: 6.9 percent for 24 months; 8.9 percent for 36 months; 9.9 percent for 48 months; and 10.9 percent for 60 months. The former rates were 2.9, 5.9, 6.9 and 10.9.

Buick and Oldsmobile cash rebates range from $200 to $1,000 depending on the option package ordered. GMC is offering a $1,000 rebate on S-15 pickup trucks and a $1,250 rebate on S-15 Jimmy sport-utilities. All programs run indefinitely.

Pontiac and Chevrolet also were expected to announce incentive programs by today.

Earlier this month, Chevrolet introduced $750 cash rebates on 1990 Lumina sedans. An $800 cash rebate on the 1990 Geo Prizm has been in effect for two months.

Cadillac didn't announce incen-

Rev. Moon's church behind Panda Motors plant in China

The Unification Church has joined a former U.S. diplomat and a major Korean industrial concern in an effort to create China's biggest car manufacturing facility.

The project, promoted by the little known Panda Motors Corp. of Vienna, Va., calls for production of 300,000 passenger cars a year by 1995 at a factory in Guangdong Province.

The factory's entire output — more than 10 times that of Volkswagen-Shanghai, currently China's biggest automaker — is destined for export as "the least expensive, most durable car on the world market," said a U.S. government source.

The official China News Service reported the first stage of the $250 million project will be completed in 1995. The first cars were scheduled for production next year, but sources close to the project now say they will not appear until 1991.

The car — for which a retail price of $4,000 has been mentioned by U.S. government sources who are following the project — will be powered by a four-cylinder engine in the 1,250 to 1,500 cc category.

Corporate registration documents filed in Delaware reveal that the treasurer of Panda Motors is Pak Bo-Hi. He is also chairman of Newsworld Communications, which publishes the Washington Times and is controlled by the Unification Church. Pak, a former South Korean military attache, is the chief aide to the founder of the Unification Church, the Rev. Sun Myung Moon.

Although Chinese officials last week confirmed plans for a 300,000-unit assembly plant and few other details, some U.S. and Korean trade officials remain sceptical. The doubt centers on the apparent absence in the project of an established automaker to supply technology and components, and the uncertainty of operating in the People's Republic of China.

One reason for Korean investors to operate through a U.S. corporation like Panda Motors is that South Korea has no diplomatic relations with China.

By establishing the plant in the name of a U.S. company, the in-

EPA lists pros, cons of methanol

Smaller engines, less pollution but lower mpg, higher prices

By Arthur Flax
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — Methanol-powered vehicles could be lighter than cars that run on gasoline and have smaller powertrains and cooling systems, the EPA said in a new study.

Methanol fuels also could be sold today at prices competitive with gasoline and at even lower prices in the future, the EPA said. But the use of methanol would also require changes to fuel and exhaust systems that could make cars more expensive.

The study, released last week, is the first of a series of EPA reports on alternative fuels being prepared as Congress considers President Bush's Clean Air Act proposals. The Bush plan calls for alternative fuels or reformulated gasoline to reduce air pollution.

Reports on other alternative fuels are scheduled to be released before February. A report on reformulated gasoline also is expected.

The EPA analysis assumes that Bush's Clean Air Act proposal, which would require 500,000 alternative-fuel vehicles to be sold in the 1995 model year and 1 million to be sold annually from 1997 through 2004, will be enacted.

The chief environmental benefit of methanol will be significant improvements in the ozone levels of the most polluted areas of the country and also a reduction of toxic pollutants, EPA said. EPA estimated that methanol fueled cars will reduce emissions of pollutants that react to form ozone — a chief ingredient in smog — by 30 to 80 percent compared with gasoline-powered cars.

In the long run, EPA said, "methanol should be used in its pure form, known as M100, because of its superior environmental benefits."

EPA's environmental analysis assumes that flexible fuel vehicles — those that can run on gasoline or methanol — will be used from 1995 to 1999 and M100-dedicated vehicles will be sold thereafter.

The use of M100 in an engine that makes full use of methanol's favorable characteristics, EPA said, "will allow use of a smaller, lighter engine that delivers the same power as the engine it replaces."

Such an engine, EPA said, will permit use of lighter body and suspension components. If a less-powerful engine is used in the lighter car, lighter-duty drivetrain components can also be used, EPA said. A smaller engine would also allow the use of a smaller catalytic converter.

The combustion of methanol rejects less heat to the engine's cooling system and exhaust system than gasoline. As a consequence, "it will clearly be possible to reduce the size of the conventional radiator substantially and it may even be possible to eliminate the conventional radiator, fan and controls completely and rely on only the heater core for engine heat rejection," the EPA report said.

Offsetting the savings from smaller, lighter components are the added costs of a fuel system that can withstand the corrosive effects of methanol, sophisticated fuel injection needed for satisfactory cold starts and formaldehyde controls that may lead to more expensive catalytic converters.

Methanol has half the energy value of gasoline and, even with the added efficiency, a methanol vehicle would require a larger fuel tank.

Flexible-fuel vehicles will cost consumers $300 more per vehicle, EPA predicted.

Given today's methanol prices, the report predicted that M85, the mixture of 15 percent gasoline and 85 percent methanol that is likely to be used as a near-term alternative fuel, could be sold for $1.14 to $1.24 for a quantity that would provide the energy of a gallon of gasoline.

EPA assumes that a vehicle dedicated to run on methanol use could use fuel 30 percent more efficiently than a gasoline vehicle and projected that the methanol equivalent to a gallon of gasoline in such a vehicle would cost 92 cents to $1.03 per gallon.

With high-volume production, EPA estimated that methanol could become available at the retail pump for 55 to 57 cents per gallon. If the methanol vehicle is 5 percent more efficient than the equivalent gas-powered unit, the cost equivalent of a gallon of gasoline could be $1.05 to $1.09 per gallon, EPA said. If efficiency is improved by 30 percent, the equivalent methanol cost could be 85 to 88 cents per gallon.

Future increases in the price of crude oil and gasoline will likely cause natural gas prices — the basis for methanol fuel — to rise, too, but at a lesser rate, EPA predicted. That would result in increased methanol market share or suppressed gasoline prices, all to the benefit of the U.S. economy.

Nissan plans to hike overseas output, cut exports

By Mary Ann Maskery
AUTOMOTIVE NEWS STAFF REPORTER

TOKYO — Nissan Motor Co. will reduce exports in favor of overseas production, and will increase imports in order to promote international cooperation.

The Ministry of International Trade and Industry praised the move as an effort to reduce trade friction.

Nissan exported 1.09 million vehicles in the 1989 fiscal year, which ended March 31. That exceeded overseas production by a 2-to-1 margin. Nissan said that by 1992, it will reduce exports by 90,000 units to 1 million, but overseas sales will expand to a projected 1 million — an increase of 430,000.

The company said it hopes to reverse the ratio between exports and locally-built vehicles in overseas sales to 1 to 2 by the end of the 1990s. At that stage, Nissan hopes to be making a 2 million units a year overseas.

Imports will double the current value of $370 million by fiscal 1992. By the end of the 1990s, Nissan's imports will equal 10 percent of the vehicles it makes in Japan.

The company is also considering importing the Volkswagen Passat for sale in Japan. Plans call for production of the Passat in Japan, starting in 1991, with a target of 8,000 annually.

The Passat imports would be in addition to that. Nissan has been producing the Santana in Japan since 1983, averaging 12,000 units a year.

Flat Rock builds first Mazda 626

Osamu Nobuto, president of Mazda Motor Manufacturing (U.S.A.) Corp., drives the first Mazda 626 off the line at its Flat Rock, Mich., plant. Plans call for 5,000 626 four-door sedans to be built monthly.

Ford maps programs to improve CSI rating

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

While its corporate advertising campaign boasts that Ford Motor Co. has built the highest quality cars and trucks in North America for nine consecutive years, the company is becoming increasingly concerned about its performance in the customer service end of its business.

The company is taking steps to improve that performance.

Ford's relatively low service scores on J.D. Power's annual Customer Satisfaction Index as well as internal studies have befuddled Ford executives, who have watched the company rack up a series of successful product launches and record profits in recent years.

In its internal CSI rating system called Quality Commitment Performance, Ford and Lincoln-Mercury dealers have improved steadily in the last three years but have fallen short of achieving the average overall score of eight set as a goal last year. National average Quality Commitment Performance scores were 6.73 in 1986, 7.07 in 1987, 7.31 in 1988 and 7.60 through June 1989.

The last time Ford Division was listed among J.D. Power's top makes was in 1986 when the division ranked 16th among 30 makes. In 1989, Ford Division was 25th among 36 makes, up from 28th in 1988.

Mercury ranked 16th in 1989, 18th in 1988 and 10th in 1987.

Lincoln placed sixth in the 1988 survey, 12th in the 1987 survey and fifth in the 1986 survey.

Ford officials have complained that the Power survey is not balanced and asks more questions on service-related items than on product items.

"It's more of a service satisfaction survey than a customer satisfaction survey," said Ross Roberts, L-M general manager, at a press luncheon during L-M's dealer introduction show in Atlanta last month.

Ford officials say makes like Acura and Mercedes, which score very well in the Power CSI survey, do not have as large an owner base as Ford and L-M. Ford and L-M dealers often cannot handle the large amount of service business and are sometimes land-locked and cannot expand their service facilities.

"Since the mid-1980s, we have seen our sales volume rise substantially, but we did not increase the number of service bays available to service those cars and trucks; what we have is an undercapacity situation," said a Ford parts and service division spokesman.

All levels of the company are said to be involved in the push for higher CSI numbers. The company spent "a huge amount of time and

Mercedes to open California design center in 1990

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

STUTTGART, West Germany — Mercedes-Benz AG plans to establish a design center in Southern California next year. The facility will be the first-ever U.S. studio operated by a European carmaker.

The new Mercedes styling center is part of an effort to draw closer to the U.S. market, according to Juergen Hubbert, head of the passenger-car division.

The studio will be under the supervision of Mercedes' car styling center in Stuttgart, which is headed by design chief Bruno Sacco.

Hubbert said the California styling center will contribute ideas to all future Mercedes car projects after the new W140 — the S-class replacement slated for introduction in late 1990.

"The W140 is ready," said Hubbert. "But as for the cars after the W140, maybe we will have some details from this group."

But he emphasized that Mercedes cars will never lose their German engineering and design heritage.

"A Mercedes is a car made in Germany," said Hubbert. "But we have to do other things."

The move reflects the importance of the U.S. market for Mercedes as it prepares to do battle with Japan's two new luxury divisions, Toyota's Lexus and Nissan's Infiniti.

It also suggests a growing influence of Mercedes-Benz of North America on product planners in Stuttgart.

The U.S. officials sat down with top German executives earlier this year to stress the need to better meet U.S. market demands in the face of a slumping European luxury-import segment and the new Japanese threat.

"We want to be nearer to your market," said Eberhard Herzog, who is responsible for worldwide passenger-car sales at Mercedes-Benz.

Hubbert said the new styling center will begin operations next year, though he declined to say precisely when it will open nor where it will be located. However, he said the studio will be in California.

A Mercedes spokesman, when asked for details, later said it is "rather early" and that is is "absolutely not known" where the facility will be.

Hubbert said the studio will be staffed with stylists from both the United States and Germany.

He said he does not know how big the operation will become, but he said it will start with a small group.

Other European companies are known to be toying with setting up a California studio.

IDEA Institute of Turin, Italy, which designed about 14 vehicles that either are being produced or will be by 1992 in Europe, is weighing prospects for a West Coast facility at the urging of European clients. It would be the first California studio for a leading Italian styling house.

The Big 3 and several Japanese carmakers operate studios in California. Some European firms have affiliations with California design schools.

Volkswagen has had design staffers in the United States and maintains contacts with California schools.

But chief stylist Herbert Shaefer said earlier this year that VW has decided against setting up a styling studio in California.

BMW Product Development Chief Wolfgang Reitzle last week said BMW, which also has ties to California design schools, does not currently plan a U.S. studio.

Acura, Nissan, Daihatsu pace import gainers

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

LOS ANGELES — Nissan, Acura and Daihatsu paced the relatively sparse number of winners among imports in sales for August and the first two-thirds of 1989.

Japanese car importers as a group posted a strong August, up 11.32 percent from last year. That cut the year-to-date falloff in sales of Japanese imports almost in half.

Considering the rapid growth of production in North America by Japanese transplant and joint-venture assembly plants, the nine Japanese automotive marketers in the United States are outperforming the overall new-car sales rate.

So far in 1989, Daihatsu, Acura and Nissan imports are posting double-digit percentage gains. Other gainers include Volvo, the only European importer ahead of last year's sales; Mitsubishi; Ford Festiva, imported from Kia of South Korea and a newcomer to the positive side; and Honda, up 1.65 percent for the year after a 27.96 percent jump in August.

Six imports slipped for the year but are outperforming the import market as a whole, which dropped 6.52 percent for the first eight months. They range from Subaru, off 0.59 percent, to Jaguar, down 5.21 percent. Others are Chevrolet's Geo, Mazda, BMW and Volkswagen.

Those posting larger losses than the overall market include Isuzu, down 21.08 percent through August; Mercedes-Benz, off 14.38 percent; Peugeot, down 7.56 percent; Pontiac LeMans (from Korea's Daewoo), off 8.89 percent; Saab, which slipped 12.03 percent; and Toyota, off 16.16 percent. That group also includes Audi, off 17.55 percent for the year after plunging 46.65 percent in August.

Chrysler's imports from Japan's Mitsubishi Motors were off 19.01 percent through August. The trend may continue for the rest of the year because Chrysler has traded some of its Japanese imports to Mitsubishi Motor Sales of America in return for a larger allocation of Lasers from Diamond-Star, the Mitsubishi-Chrysler joint venture plant in Normal, Ill.

Seven companies posted major loses for the eight-month period on a percentage basis.

Hyundai is reducing its monthly losses as it starts to get a better supply of Sonata, and redesigned 1990 Excels will begin to trickle into the sales numbers starting this month and in October, but the company was off 30.94 percent for eight months.

The others are all Europeans: Alfa Romeo, Merkur, Sterling, Porsche and Maserati. Yugoslavia's Yugo was off 68.73 percent for the first eight months.

European imports as a whole declined 12.88 percent for that period.

Flat floor limo

Limousine manufacturer A.H.A. Automotive Technologies Corp. of Ontario, Canada, is introducing a flat-floor design for the 1989 Lincoln Town Car. The design eliminates the hump created by the transmission tunnel and results in increased legroom, the company said. The limousine is available in 60- and 66-inch stretches and seats eight persons. The car features a sunroof, leather upholstery, curved rear-facing seat and walnut trim. Options include a Motorola telephone, electronic bar, as well as fax and copier machines.

Former UAW director Runnels re-indicted on fraud charges

DETROIT — A federal grand jury has handed down an indictment recharging Frank Runnels, a former regional director of the UAW, with mail fraud and conspiracy.

Last June, an appeals court reversed Runnels' conviction on the original indictment.

The original indictment charged that between 1978-1983, when Runnels was president of Local 22 in Detroit, he committed mail fraud that violated the membership's "intangible rights."

An earlier Supreme Court decision held that a person cannot be convicted of mail fraud affecting only intangible rights.

The new indictment charges Runnels with mail fraud and mail fraud conspiracy that deprived UAW Local 22 and its membership of property rights.

It charges that while local president, Runnels took kickbacks from law firms in exchange for funneling worker compensation claims to them.

Education, training cost is $1 billion for industry

HERNDON, Va. — Education is big business for the auto industry, which spends nearly $1 billion a year on education and training for its employees.

The Automotive Information Council said approximately $560 million of that amount is spent by the Big 3. That includes funds committed through joint education and training programs with unions.

Chrysler Corp. said it allocates nearly 10 percent of its $117 million annual training budget to instructing employees in basic skills. General Motors said it has spent over $1.3 billion on education and training over the past five years.

Freightliner upgrades tractor brake systems

PORTLAND, Ore. — Freightliner has made bobtail air brake proportioning valves standard equipment on all its tractors and has expanded its anti-lock braking system options.

The new features are part of its effort to improve vehicle safety. Previously available safety items include three-point restraint systems, automatic brake adjusters and right-side windows with wide-angle Fresnel lenses.

James L. Hebe, Freightliner senior vice president of sales and marketing, said the Bendix BP-R1 proportioning valve, after sensing that a tractor is bobtailing, reduces pressure in the rear brake chamber to limit wheel lockup.

The purpose is to let the front axle — which carries most of a bobtailed tractor's weight — do most of the braking. The proportioning valve then optimizes braking between axles for safer operation.

The company's new anti-lock braking system is a simpler and more affordable version of the Wabco system it has been offering.

It has four channels, rather than the six of the previous system.

In a six-channel system, sensors monitor the speeds of all six wheels. With a four-channel system, sensors are installed on four wheels, the two on the front axle and two wheels on one of the drive axles, depending on the type of suspension the truck has.

Hebe said tests showed that if the brakes on the tandem axle are well-maintained and in good balance, the stopping and stability performance of the four-channel and six-channel anti-lock braking systems are nearly identical.

The six-channel system still performs best overall, but the four-channel system provides a definite improvement in stopping and stability, he added.

The new system also offers the "Traction Plus" add-on option that automatically applies the brakes to a wheel that is just starting to spin, allowing the driver to maintain directional stability and control when accelerating from a standstill.

Freightliner introduced the more expensive six-channel system first because "after the disappointing days of mandated (anti-lock braking) systems (in the 1970s), we weren't taking any chances with a system that wasn't clearly the very best," Hebe said.

The four-channel system sells for $1,850. Traction-Plus as an optional add-on feature is another $575. The six-channel system is $3,000.

Freightliner will continue to offer the latter, though it expects most customers to gravitate toward the less expensive system.

The company has sold approximately 1,200 six-channel anti-lock braking systems since introducing them in 1987.

To help bolster sales of anti-lock braking systems, Freightliner's subsidiary, Mercedes-Benz Credit Corp., is offering a 7.5 percent reduction in insurance premiums on vehicles equipped with them. Associates Commercial, the finance company recently purchased by Ford Motor Co., is also offering a 5 percent reduction in insurance premiums for vehicles equipped with anti-lock brakes.

Associates Commercial offers financing and insurance to all heavy-truck manufacturers.

TRUCK BRIEFS

New Volvo sleepers

GREENSBORO, N.C. — Volvo GM Heavy Truck introduced sleeper versions of its Volvo FE6 and FE7 tractors and trucks in the United States.

The new models are designed for regional and national transportation of high-volume, low-weight goods, according to Thomas Sokach, Volvo GM regional distribution product manager.

The new Volvo models have a compact sleeping compartment under the same roof, eliminating interior bulkheads between the cab and bunk. The bunk area has a 24- by 75-inch mattress with three feet between the mattress and the ceiling of the cab.

The FE6 and FE7 sleeper models have a bumper-to-back-of-cab measurement of 80 inches, 13.5 inches more than the non-sleeper models and weigh 145 pounds more.

New Grumman line

STURGIS, Mich. — Grumman Olson plans to introduce a line of dry freight van bodies for 1990 chassis this fall.

The new 10- to 28-foot van bodies are Grumman Olson's entry into the dry freight segment of the medium/heavy-duty truck market.

The company has been selling dry freight van bodies on cutaway chassis through Ford, GMC and Chevrolet dealers.

The new van body line will be compatible with chassis from domestic and foreign manufacturers and will be available through truck dealers and distributors throughout the United States.

Volvo GM introduces the first of its new FE6 sleeper cab models.

Makers fine-tune incentive programs; Jaguar's ends

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Several carmakers have adjusted their cash incentive programs while Jaguar discontinued its program last week.

General Motors divisions took the wraps off their 1990-model programs last week. They offer cash rebates or cut-rate loans (story on Page 1).

Chrysler Motors added select 1990 Dodge pickups to its consumer incentive program. It also increased rebates on 1988 and 1989 cars and trucks.

Dodge is offering a $2,000 rebate on 1988, 1989 and 1990 two-wheel-drive and four-wheel-drive 100 and 150 pickups. The 1988, 1989 and 1990 2wd and 4wd 250 and 350 models (excluding diesel and Club Cab) have a $2,000 rebate as well.

The $500 incentive on 1988 and 1989 Dakota S now includes 1990 models. The cash on 1988 and 1989 Dakota (except S and Club Cab) is increased to $1,500 from $1,000 and is extended to 1990 models. All 1990 model 2wd and 4wd Ram Club Cab pickups are covered by $1,500 rebates. The 1990 Dakota Club Cab carries a $1,000 incentive.

Chrysler car rebates are: 1988 and 1989 base Plymouth and Dodge Colt three-door models, $500 up from $300; 1988 and 1989 Dodge and Plymouth Colt E three-door models with manual transmission, $750 up from $500 (models with automatic transmissions remain unchanged at $750); 1988 and 1989 Dodge and Plymouth Colt wagon, $750 up from $500; 1988 and 1989 2wd Ram 50, $750 up from $500; and 1988 and 1989 Dodge and Plymouth Vista, $750 up from $500.

Also: 1988 Dodge and Plymouth Colt DL three-door hatchback, $1,000; 1938 and 1989 4wd Ram 50, $1,000 up from $750; 1989 Dodge and Plymouth Colt GT three-door hatchback, $1,500 up from $1,000; and 1988 and 1989 Dodge Raider, $2,500 up from $2,000.

Unchanged are Chrysler Conquest at $2,000; 1988 Dodge and Plymouth Colt four-door sedan, $500; and 1989 Eagle Summit, $1,000.

Consumer cash on 1988 and 1989 Chrysler LeBaron (except convertible) is increased from $1,500 to $2,000 and the 1988 and 1989 Dodge Daytona rebate goes from $1,000 to $1,500.

Cash incentives on 1988 and 1989 Dodge Omni, Plymouth Horizon, Dodge Shadow and Plymouth Sundance are reduced from $1,500 to $750.

Alternative financing through Chrysler Credit Corp. remains unchanged. The 0.0 percent financing on loans of one to 24 months on 1988 and 1989 Chrysler New Yorker Landau and LeBaron coupe (except convertible), Dodge Daytona and Dodge conversion vans, Eagle Premier and Jeep Grand Wagoneer remains in effect.

Finance rates for Cherokee and Wagoneer Limited are: 4.9 percent for one to 24 months; 7.9 percent for 25 to 36 months; 10.9 percent for 37 to 48 months; and 11.9 percent for 49 to 60 months.

For the rest of the vehicles in the incentive program the finance rates are: 2.9 percent for one to 24 months; 5.9 percent for 25 to 36 months; 6.9 percent for 37 to 48 months; and 10.9 percent for 49 to 60 months.

Chrysler Motors incentives run indefinitely.

Ford Motor Co. increased the customer cash on its 1989 Ford Probe GL and LX models to $750 from $500. The rebate on the Probe GT has gone from $500 to $1,000. The 1989 Ford Thunderbird SC and Mercury Cougar XR7 have received rebates of $1,500. The Probe, Thunderbird and Cougar programs expire Oct. 4; Ford's others have no cutoff date.

In lieu of cash allowances, Ford offers special finance programs at 2.9 percent for 24 months; 6.9 percent for 36 months; 7.9 percent for 48 months; and 10.9 percent for 60 months.

Peugeot Motors of America, which previously offered dealers incentives of $1,000 to $2,000 on select models, is now offering $1,000 to dealers on all of its cars.

Jaguar discontinued its $5,000 customer rebate on Sept. 18.

*Rebates go to the customer in some regions and to the dealer in other regions

REBATES

FROM PAGE 1

tives on its 1990 models.

Chrysler Motors also announced incentives on some 1990 trucks that include increased cash rebates.

The 1990 Dodge two-wheel-drive and four-wheel-drive 100 and 150 pickups and 1990 2wd and 4wd 250 and 350 models (excluding diesel and Club Cab) are covered by a $2,000 rebate.

There is a $1,500 rebate on Dakota (except S and Club Cab). Dakota S has a $500 incentive. All 1990 2wd and 4wd Ram Club Cab pickups have a $1,500 rebate. The 1990 Dakota Club Cab is covered by a $1,000 rebate.

Moves by GM and Chrysler likely will force Ford Motor Co. to join the fray. Some of its present incentives expire Oct. 4; others have no expiration date.

Incentives on 1990 models had been expected as auto analysts predicted soft fourth-quarter sales. Analysts speculated that hefty price hikes by the Big 3 would be used to cover the cost of more aggressive incentives.

Thomas O'Grady, an auto analyst and president of Intergrated Automotive Resources in Wayne, Pa., said, "Without incentives, they are not going to sell cars." He agreed that GM will most likely start the 1990 incentive momentum with Chrysler and Ford close behind.

"GM is the one we keep hearing rumors about and they seem to be the most anxious," he said.

Indeed, some GM dealers early last week were anxiously awaiting the go-ahead for 1990 rebates from the manufacturer. They expressed resentment about having to use incentives to sell cars they believe are overpriced in the first place.

"We're hoping they do (announce incentives)," said a GM dealer who did not want to be identified. "For instance, Oldsmobile 98s are up $1,000. It's hard to justify the price increase on that car."

Said another dealer: "I have a gut feeling that they (GM) have recognized that the cars are a little overpriced. Lowering the price (with rebates) means it was overpriced in the first place. Look at the Cadillac Allante. Had it been priced at $49,900, they would have sold more of them."

NADER

FROM PAGE 2

Nader, who would rather see research on ethanol as a cleaner fuel, said methanol is the auto companies' "insurance card. It keeps the fuel cycle inside the club. The oil industry. The coal industry. The auto industry."

Nader cited the Japanese automakers for lagging in pollution control, fuel efficiency and safety.

"The technology is stagnating," he said, because the Japanese work more on production efficiency and dash panel gadgetry, rather than safety, fuel efficiency and pollution control.

Before, he said, Japanese makers were at least doing advanced research. "It was usable politically. Now we can't even use it politically. There is nothing to point to."

The Japanese are trailing U.S. makers in air bag use, Nader said. They are gradually installing them in products for the United States, but they may not be concerned about the same safety features in Japan.

"I don't get the impression they'll have the same proportion (of air bags) in this country," Nader said. "I think they're going to try to say seat belts are good enough."

There is no consumer pressure in Japan to make them take action, he said.

"But it may become a publicity issue. It's one thing selling cars abroad cheaper than they're sold here. It's another thing having a double standard for protection of life. I don't see how that's going to play."

The EPA's Motor Vehicle Emissions Control Laboratory in Ann Arbor, Mich., is examining a wide variety of Japanese vehicles powered by methanol. Just some of the M100 (100 percent methanol) and M85 (15 percent gasoline and 85 percent methanol) vehicles tested recently were a Nissan Sentra, a turbocharged Nisson Sentra, a Toyota LCS-M Carina, and a Toyota Cressida.

GM to idle six plants in October

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

General Motors will begin the fourth quarter by idling six U.S. plants in an effort to keep inventory in line with sales.

The company will close four truck plants and two car plants in October.

GM closed three plants today to adjust bulging inventory. They are: Arlington, Texas; Detroit truck; and the Pontiac West truck facility in Pontiac, Mich. Arlington will be down one week; Detroit truck, two weeks; and Pontiac West, three weeks.

The Wilmington, Del., plant, which assembles the Chevrolet Corsica/Beretta, will be idle the weeks of Oct. 2 and Oct. 9.

Slow Corsica/Beretta sales have also forced GM to schedule downtime at its Linden, N.J., plant for two weeks beginning Oct. 9. Chevrolet dealers had a 78-day supply of those models on Sept. 1.

Also, GM will close its truck plants in Moraine, Ohio, and Shreveport, La., for three weeks, beginning Oct. 2.

Last week's targeted domestic output totaled 154,387 cars, 9.12 percent more than the prior week's 141,483 and 4.67 percent above the year-ago week's 147,496.

Last week's estimated production was split as follows:

GM, 46.62 percent; Ford Motor Co., 23.98 percent; Chrysler Motors, 13.41 percent; Honda of America Manufacturing, 4.74 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.71 percent; Toyota Motor Manufacturing U.S.A., 2.47 percent; New United Motor Manufacturing Inc., 2.33 percent; Diamond-Star Motors, 2.04 percent; and Nissan Motor Manufacturing Corp. U.S.A., 1.70 percent.

Last week's scheduled truck production rose to 80,744, up 12.87 percent over the prior week's 71,538, when two Ford plants were down because of high inventory. Last week's total dipped 9.00 percent from the year-ago week's 88,732.

Ford's Wayne, Mich., truck plant was expected to resume output today after being idle because of a parts shortage.

Chrysler's Grand Wagoneer line at its Toledo, Ohio, plant was scheduled to resume operation after two weeks of downtime due to slow sales.

Car output rises 14% in Canada

Last week's scheduled Canadian car output of 22,388 rose 13.87 percent above the prior week's 19,661 and increased 8.06 percent over the year-ago week's 20,719.

Truckmakers planned to build 20,630 units last week, 1.75 percent above the previous week's 20,276 but 3.87 percent fewer than the year-ago week's 21,461.

Chrysler Motors' Bramalea, Ontario, plant resumed production of its Premier line today.

The plant had been idle for six weeks because of slow sales.

Sour sales spur Suzuki U.S. shakeup

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

BREA, Calif. — A housecleaning at American Suzuki has left the company without its top American managers and has put Japanese executives in charge of operations.

Two founding members of Suzuki's U.S. automotive team, Doug Mazza and John Dorsey, were among three American managers who abruptly resigned last week. And the president of the automotive division, Toshiyuki Arai, has been reassigned to Japan.

The shakeup reinforces a pattern among overseas-based automakers: When things go sour, the home executives take control. The moves also serve as another reminder of the lingering damage from a 1988 Consumer Reports story that called the Samurai unsafe. Despite widely praised efforts in crisis control, Suzuki hasn't recovered.

Kenji Shimizu, a longtime senior managing director of Suzuki Motor Co. who was sent from Japan in July to bolster Suzuki's ailing U.S. operations, adds the title of president to his job as chairman of American Suzuki Motor Corp. In addition to Suzuki's automotive products — the Samurai and Sidekick sport utilities and Swift subcompact — the company also sells motorcycles, outboard engines and power equipment.

Mazza

Another Japanese Suzuki executive, Yoshi Fujii, starts today as executive vice president of the automotive division, Suzuki of America Automotive Corp.

Gone are three pioneers who helped launch Suzuki's U.S. automotive operations five years ago and were hailed as marketing wiz-

JAGUAR

Ford and GM ready to battle for share of luxury carmaker

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Ford Motor Co.'s early play for Jaguar signals the beginning of a drawn-out bidding war with General Motors for one of the world's most attractive auto marques.

The maneuvering could take a myriad of turns, but a few certainties are emerging, say industry analysts and observers: Jaguar Chairman Sir John Egan and his management team have virtually no chance of remaining independent, despite their declared intent to do so, and no one can realistically compete with Ford and GM for the prize.

Unlike Porsche or BMW, there is no controlling family to resist takeover and the lone shareholder with power to prevent a sale, the British government, appears to favor a new owner.

Furthermore, the high price that will be commanded — Jaguar's uncertain prospects notwithstanding — is seen as prohibitive to almost everyone but the world's two largest carmakers.

> **"GM and Ford probably see it as a chance of a lifetime."**
>
> **— JOHN LAWSON**
> **Nomura Research Institute**

"GM and Ford probably see it as a chance of a lifetime," said John Lawson of Nomura Research Institute in London. "They can probably convince themselves that this is one of those rare opportunities for which it is worth losing money for a decade."

Jaguar, which has been hit by falling sales in the United States, reported an operating loss of £2.8 million ($4.5 million) in the first half of 1989.

Analysts expect the company to sell for £7 to £10 ($11-$16) per share for a total of £1.3 billion to £1.8 billion ($2.1 million to $2.9 billion).

Ford announced Sept. 19 that it will take an initial stake of up to 15 percent — the maximum permitted by the British government under terms of Jaguar's 1984 privatization. That limitation, called the golden share, expires in December 1990.

The Wall Street Journal reported last week that Ford's move to buy shares on the open market was a reaction to the imminent friendly acquisition of a 30 percent stake by GM that would have required early relaxation of the golden share.

Ford's pre-emptive strike put the reported GM-Jaguar agreement on

Audi plans price cut on all '90s

Incentives slated for salespersons

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

Audi of America this week will announce across-the-board price cuts of 7-9 percent on 1990 models.

Company officials told Audi dealers last week at a Dallas meeting that Audi also will reduce wholesale parts prices to dealers and establish a cash incentive program to help keep salespeople in the Audi ranks.

Richard L. Mugg, vice president of Volkswagen of America in charge of Audi of America, told dealers Audi will announce its 1990 prices Wednesday.

Mugg also outlined a plan to rid the organization of marginal dealers, as previously reported in Automotive News.

"We're not out to cut dealers, were out to help build dealerships," Mugg told the group.

But he said Audi is losing patience with dealers who are not interested in the franchise.

The news came at Audi's annual dealer meeting, a "one-day, nononsense affair" last Friday that was attended by an estimated 80 percent of Audi's 365 dealers.

The 1990 pricing strategy outlined to dealers by Mugg apparently replaces cash-to-dealer incentives used during the 1989 model year.

A Midwest Audi dealer who attended the meeting said prices will be cut on all models.

He said a 1989 Audi 100 that is priced at $28,300 will be $26,900 for 1990 equipped with automatic transmission, driver-side air bag and ski sack.

Audi said other 1990 models will have more standard equipment than 1989 models.

GM to appeal $5.2 million jury award to bankrupt Ohio dealer

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

General Motors vows to appeal a $5.2 million award to the owner of a defunct Chevrolet dealership in Painesville, Ohio, after a jury ruled that GM forced him into bankruptcy by aiding a competing dealership.

Daniel Nester, 48, former owner of Earl Evans Chevrolet, said GM favored a nearby dealership that was partially owned by Motors Holding, a division of GMAC Financial Services, with hot-selling new cars while withholding them from his dealership.

Charges of nepotism also shadowed the suit because relatives of GM employees worked at Classic Chevrolet in Mentor, Ohio, which opened only four miles from Nester's dealership in 1979.

The benchmark verdict could eventually cost the automaker more than $15 million after figuring interest, attorney fees and a requirement in the state's Dealer Day in Court Act that calls for doubling jury awards won by auto dealers against manufacturers.

Nicholas DeVito, Nester's lawyer, characterized the award as the "largest for any auto dealer against a manufacturer ever in Ohio."

The jury specifically determined that "GM failed to act in good faith" in its relations with Nester and "discriminated in its allocation of new motor vehicles," leading to the destruction of his dealership in violation of the act.

DeVito has asked for $4.2 million in legal fees plus interest dating from 1979 when Classic opened.

Evans Chevrolet had been in business since 1954.

A GM spokesman said the company is disappointed in the outcome of the week-long trial in Lake County Common Pleas Court.The trial ended Sept. 19.

The jury found that GM discriminated against Earl Evans Chevrolet beginning in 1979 by ignoring Nester's requests for popular vehicles and giving them instead to Classic Chevrolet.

"There was also a vast disparity in order-response time," said Nester. "In some cases, Classic received cars twice as fast as I did."

Nester said Motors Holding's investment in Classic Chevrolet was about $2 million while the dealer-operator's stake was $150,000.

Motors Holdings invests in dealerships to aid qualified dealers who may not have enough startup capital. The investments are not intended to be permanent equity positions. Motors Holding sold its stake to dealer Jim Brown in 1981. He declined comment on the lawsuit.

BMW won't rush new 7 to answer Mercedes S

Automotive News Staff Reporter Richard Johnson rounds up the news — and rumors — from the biennial Frankfurt auto show.

FRANKFURT, West Germany — BMW will not respond to Mercedes' new S-class by replacing the 7 series in 1992 — three years ahead of schedule — as has been speculated in Germany.

Rather, the emerging picture of a significantly larger S-class successor will find the 7 without drastic facelifting or changes, according to product development chief Wolfgang Reitzle, who said the current BMW will fit into a slightly smaller vehicle segment.

Reitzle said BMW stylists will concentrate on the exterior shape of the new 7 next year, which under BMW's development cycle means a 1994 or 1995 introduction.

Mercedes-Benz product development chief Wolfgang Peter said the new S-class is three months ahead of schedule.

Tentative plans call for the car to be shown at the Paris auto show in October 1990. Mercedes marketing executives point to a late-1990 or early-1991 sales launch.

But the S-class's scheduled 1992 model year launch in the United States could delay the public debut until the Geneva show in March 1991. Mercedes may not want an entire year to lapse between a Paris showing and the U.S. debut.

Big-engine maneuvers

A high-ranking insider says Mercedes-Benz has decided not to proceed with a V-16 engine program. A key factor, he said, is that Mercedes is convinced that rival BMW has rejected the idea.

Meanwhile, BMW's Wolfgang Reitzle said there are no plans to counter Mercedes' forthcoming 6-liter, 400- horsepower V-12 with a bigger version of BMW's 5-liter, 300-hp V-12. A 48-valve, 5.4-liter version is known to have been developed but BMW, like Mercedes, already caps its V-12's top speed in the 750i and 850i at 155 mph.

No Porsche dealer purge

Porsche AG Marketing Director Hans Halbach said the 288-member U.S. dealer network should be "closer to 200 than 300, but we aren't sitting here with a plan and I wouldn't like to pin down a number."

A network of about 325 dealers retailed 30,471 cars in the United States in 1986. But sales of just over 11,000 are forecast for the 1990 model year. Halbach said he is demanding that franchise-holders make a strong commitment to the marque.

"We're not going to buy dealerships and we won't cancel anyone on a wholesale basis," he said.

928 facelift wins out

Porsche officials say they considered three options for breathing new life into the 12-year-old, range-topping 928 model that has never quite found its niche. The options were a new power package, a convertible and exterior freshening.

"We picked neither power nor a convertible," said Marketing Director Hans Halbach. "We picked optical changes that can be called a facelift."

Porsche is not revealing timing for the changes.

Subsidy rumblings

Top Mercedes-Benz officials confess to some curiosity about whether the competitively priced new Lexus and Infiniti luxury brands are being "subsidized" by Toyota and Nissan.

"There is some small question," said Juergen Hubbert, passenger-car chief at Mercedes-Benz AG. "We couldn't realize those prices."

Run-flat tire due for U.S.

After some hesitation, Mercedes-Benz has decided to offer Continental AG's ContiTireSystem run-flat tire on U.S. versions of the new SL.

Wolfgang Peter, head of passenger-car development at Mercedes-Benz AG, said timing hinges on production of the tire, though he added, "It can be next year."

The SL debuts in the United States this fall, but Mercedes is offering the system initially only in Europe. Continental has a limited sales and service network in the United States, but it is understood that Mercedes dealers might stock Continental TireSystem aftermarket equipment.

Continental claims its run-flat tire, if punctured, can be driven about 180 miles at up to 50 mph.

Ford to pump $6 billion into plants

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — Ford Motor Co. plans to spend a record $6 billion on capital expenditures for facilities and tooling in 1989 as it expands and improves its plants for an array of new products.

The $6 billion compares to the $4.8 billion Ford spent in 1988 and the estimated $7 billion that General Motors will spend in 1989, according to automotive analysts.

Ford's capital expenditures were $2.7 billion in the first half of 1989, compared with GM's $3 billion.

Ford is plowing money back into its present plants instead of building new assembly sites. GM, on the other hand, is shifting its money to products.

GM did most of its plant construction and renovation earlier in the decade and invested heavily in high technology. GM's Saturn plant in Spring Hill, Tenn., is its only new construction project.

Ford executives have said the company would rather expand and improve existing facilities than build new ones. In fact, Ford's top executives call the reinvestment strategy "new plants at old addresses."

Philip E. Benton, president of the Ford automotive group, told a Traverse City, Mich., automotive conference in August that Ford will make "whatever commitment of resources it takes to become the low-cost producer of high-quality cars and trucks."

One example is Ford's new small-car program in which Ford expanded and improved two plants to build the 1991 Escort and Tracer at a cost of $1.5 billion (facilities and tooling).

That included $600 million in improvements at its stamping and assembly plant in Wayne, Mich., and $260 million in improvments at its plant in Hermosillo, Mexico, according to Ford.

Some Ranger production will be transferred from the Louisville, Ky., light-truck plant to Edison, N.J., in 1990 to make way for the new four-door and two-door Explorer sport-utility models. The Explorer will replace the Bronco II.

Ford said it is spending $260 million to expand and retool the Louisville plant for the Explorer.

The entire Explorer project is expected to cost $563 million, including the expansion and retooling at Louisville, according to the company. It will also spend $285 million to retool the Edison, N.J.,

AUTOMOTIVE NEWS / CHARLOTTE WINTER

Active suspension now a two-team race

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Mercedes-Benz is likely to introduce a microprocessor-based active suspension on its new SL roadster for the 1991 model year.

The timing suggests there will be a tight race between Mercedes and General Motors' Lotus Engineering to be first on the market with what some think will be the most important new automotive technology of the 1990s.

GM has not announced its active-suspension plans, but speculation points to initial use on the 1991 Corvette, followed by a Cadillac model.

Mercedes executives usually take the public position that they are not as keen on being first as being best when talking about technical innovations such as active suspension. But a high-ranking company official said, "In this case, we can be first and best."

In principle, the Mercedes active suspension is similar to that under development by Lotus, which is generally acknowledged as the leader in the new ride and handling technology.

With the microprocessor-based system, conventional springs and coils are replaced by hydraulic rams on each wheel. The jacks are instantaneously extended or retracted by computer-controlled valves to raise wheels over road imperfections as well as balance understeer and oversteer and minimize pitch and yaw movements.

Group Lotus Managing Director Michael Kimberley said in a recent interview with Automotive News that Lotus Engineering still leads the world in active-suspension development and that one of its clients, GM, should be first on the market.

But Kimberley conceded that the race to equip a production car is heating up. "I know that there are companies around the world pushing hard who are not working with us," he said.

Lotus has several active-suspension clients besides GM. They include Volvo and Chrysler. Kimberley said Lotus has fitted systems on at least 13 products, including military vehicles.

The Mercedes insider said active

Laforza buys out its British co-owner

By Luca Ciferri
STAFF CORRESPONDENT

TURIN, Italy — Laforza Automobiles has bought back the 50 percent stake in the company owned by Britain's Eagle Trust holding company.

Laforza produces a luxury four-wheel-drive sport-utility vehicle.

Joe Monterosso, founder and chief executive of Laforza, and three business partners now own 100 percent of the company.

The deal followed negotiations in London last week with Eagle Trust executives, led by Chairman Malcolm Stockdale.

Eagle Trust was recently cleared by Britain's Serious Fraud Office following allegations of fraud in connection with its Laforza holdings.

"With the current situation at Eagle Trust . . . I felt that, unless Eagle was prepared to finance and support the Laforza projects as they had originally agreed to do, we should be allowed the opportunity to secure a new partner for the future," Monterosso told Automotive News.

Stockdale said in London, "While the directors of Eagle Trust share my enthusiasm for Laforza, we felt it was in the best interest of our stockholders and financial partners to divest Laforza Automobiles from the company's holding."

Monterosso would not reveal financial details of the buyback.

Monterosso said production of 1990 Laforzas will start in early November and is expected to reach 1,500 units.

The new model, which features suspension improvements including fiberglass leaf springs, will be priced 6 to 8 percent higher than the 1989 tag of $45,850.

Laforza price will rise 6-8 percent.

The U.S. sales network, now 40 dealers, will rise to 50 in 1990, Monterosso said.

U.S. dealers have received about 200 units and sold about half, he said.

Future plans include a new luxury sports-utility to be introduced in 1991 or 1992.

OPINION

Starting the model year with a thud

The new model year gets off to a predictable thud this week. And imagine this: Rebates have already been slapped on some brand-new 1990 models.

When the automakers cut the price of a car even before consumers have had the opportunity to ignore that car, the consumers get a clear message: Sticker prices are a joke, and rebates are a scam.

How else can you explain price hikes of 5 and 10 percent, coinciding with big signs in dealerships advertising a $1,000 rebate?

General Motors didn't even pretend that its retail prices were real. It went back to the rebate trough even while its confusing set of incentives called "The Big Easy" was helping dealers clear out their summer overstocks.

GM acknowledges that the automakers have trained buyers so they won't enter the showroom without the promise of a $1,000 check. The trouble is, the consumer knows for a fact that the sticker price is at least $1,000 too high.

Dealers — who would prefer cash to themselves rather than directly to consumers — loudly denounce rebates. Manufacturers say they hate rebates. But customer incentives have become like the weather. Everyone talks about them, but nobody does anything about them.

That's not quite true. Volkswagen United States is reducing prices, scrapping consumer rebates and even working on paying good salespeople for their good work. It is a strategy born of desperation for the once-dominant importer. But it's a good idea.

Meanwhile, the Chevrolet Lumina, GM's big hope for the important moderate-priced family sedan segment, already carries the stigma of a rebate almost before the paint is dry.

By the way, how do we know that the new sales year will get off to a thud? That's Big Easy. After building too many cars in the first half of 1989, the automakers sold off the big inventories in an August-September fire sale.

It worked, in a way. Sales picked up after a sluggish first half. But those sales came from savvy consumers who realized that the fire sale was a great time to pick up an affordable car and to avoid the price hikes of October.

So October will get the new-model introduction off to a snail's start, rebates or no.

Happy New Year.

LETTERBOX

A vote for top dollar

In response to your opinion article, "Top dollar may not be best dollar," in your Sept. 11 issue: Every time I pick up an Automotive News or any other auto publication, it is doom and gloom. Sales off, inventories high and a return on sales before tax of under 2 percent for dealers.

Now that Mazda and Chevrolet have two hot models in the Miata and ZR-1, which are experiencing that rare economic occurrence for car dealers where demand exceeds supply, you suggest we ignore the natural response to this condition of making an upward price adjustment because the immediate dollar benefits may not be as great as the long-range advantages.

Apparently you don't read what you write. Unless dealers find a way to generate more income at a lower expense, many of us won't be around to realize the long-term advantages.

The intangibles of good will and public relations have nothing to do with the price a vehicle is sold for. It is the manner in which the customer was handled before, during and after the sale that makes for positive customer response.

Price doesn't sell cars . . . people do. And, as is proven time and time again, those customers who pay the dealer a sizable gross profit are those who are most satisfied.

Jon Shultz
President
Holiday Oldsmobile-Mazda
San Bernardino, Calif.

Remember supply and demand

Whatever happened to the law of supply and demand?

Based on your editorial, "Top dollar may not be best dollar," it sounds as if you feel that the law of supply and demand is only one-sided . . . one-sided for the customer.

If, however, you feel that it should be two-sided, then please tell us how to get customers, who will buy our slow-moving cars only if they're at a bargain, to pay manufacturer's suggested retail price. Then I think Chevrolet and Mazda dealers would probably agree with your editorial.

Your article makes me think you've been around Washington too much — if it's in the customer's favor, it's good; but if it's in business' favor, it's bad.

Of course, you could encourage things to be even more one-sided and we won't need your magazine anymore because we'll all be out of business.

Who's on first?

On Aug. 9, the Wall Street Journal carried a full-page ad reporting the 1987, 1988 and 1989 results of the J.D. Power Customer Satisfaction Index for automobiles. Not surprisingly, Acura, Mercedes-Benz and Honda continue to occupy the top three spots.

True to the old saying, "Figures don't lie — but liars do figure," a July issue of Automotive News carried another full-page ad claiming Nissan, not Acura, is No. 1 in the J.D. Power survey!

Of course, Nissan is reporting the 1989 J.D. Power Initial Quality Survey for Asian imports (. . . among brown, 4-door, 6-cylinder models built after May 3, on the day shift, etc., etc.).

In other words, some innocuous combination of data, when taken out of context, will prove the claimant's superiority.

J.D. Power and Associates should take steps to protect the credibility of the venerable Customer Satisfaction Index. This rating has become a useful "qualifier" to guide customer purchase decisions, as well as a noble objective for the manufacturer to aspire to.

Unfortunately, the sort of statistical deception that Nissan utilized in its Automotive News advertisement both exploits the J.D. Power reputation and degrades the credibility of the CSI.

Nissan and others should obtain gains in customer satisfaction the "old-fashioned way," they should *earn* them!

R.G. Hoffman
Brea, Calif.

No smoking, no Ford

A couple of months ago, Automotive News carried an article that said Ford Motor Co. has banned all smoking in its facilities. Since then, I've spoken with friends and associates, smokers and nonsmokers alike, and we've decided that we will not, under any circumstances, consider the purchase of a Ford product.

Reason: Ford has adopted a program of discrimination that affects about a third of the population, those who choose to exercise their freedom to smoke.

It is only fair to assume Ford can therefore get along without that segment of the population as customers.

Shouldn't common sense prevail in these circumstance? Wouldn't it be fair to provide smoking and non-smoking areas in Ford's offices and plants for employees and guests?

Sales rise 26%; extra day helps

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Primed with rebates on 1989 and some 1990 models, U.S. car and light-truck makers sold 26.80 percent more vehicles in mid-September than in the comparable period last year. This year's period had nine selling days compared with eight in 1988.

Sept. 11-20 new-vehicle deliveries totaled 341,536, compared with the 269,357 cars and light trucks sold in mid-September a year ago. The daily selling rate was up 12.71 percent.

"It's pretty clear the strength has been caused by incentives. If they (the carmakers) hadn't done it, there would have been a definite lull," said Ann Knight, analyst and vice president, Paine Webber in New York. Sales would have fallen off a cliff without incentives, she added.

About 63 percent of this year's gain came from General Motors' heavily rebated cars and light trucks. GM sold 45,260 more vehicles this year, an increase of 36.96 percent.

Ford Motor Co. sold 16.32 percent more cars and light trucks, and Chrysler Motors' deliveries rose 13.33 percent. Of the four domestic car-truck producers, only Nissan reported a drop — 48.64 percent — from the 1988 period.

Mid-September new-car sales climbed to 211,966 units, 23.97 percent more than last year's 170,988. Only transplant Nissan reported an appreciable decline.

The four U.S. light-truck makers sold 129,570 vehicles this year, compared with 98,369 in 1988, for a gain of 31.72 percent.

Incentives and news of price increases helped boost sales and reduce inventories in mid-September for Courtesy Chevrolet and Oldsmobile in Shelby, Ohio. Steve Bird, sales manager, said Chevrolet trucks and Oldsmobile Cutlass Ciera were strong.

Cliff Hoose, general manager of Bill Luke Chrysler-Plymouth in Phoenix, Ariz., said, "We're on target. Voyager and New Yorker are selling and incentives have doubled and even trebled Horizon and Sundance deliveries."

Big 3 carmakers reported gains of 15 to 25 percent in the period. One transplant held steady and the others ranged from a loss of 50 percent to an increase of 250 percent.

Helped by "Big Easy" incentives, GM dealers sold 24.54 percent or 21,426 more cars in mid-September. All divisions reported increases over last year.

Ford sold 15.37 percent more cars than it did in 1988, although Lincoln deliveries were off 12.82 percent.

Chrysler Motors reported a 14.82 percent car sales increase, mainly due to Dodge and Plymouth gains and plenty of incentives.

Among the transplants, sales of U.S.-built Hondas jumped 85.24 percent in mid-September, and Toyota more than tripled its sales of U.S.-produced cars. U.S.-built Camrys were not on the market at this time last year.

On the other hand, Mazda's 10-day sales slipped by 11 units, and Nissan delivered about half as many domestically produced Sentras as it did during the 1988 period.

GM led the U.S. light-truck makers with a gain of 64.25 percent, or 23,834 units, over last year's comparable 10 days. Ford sold 17.62 percent more trucks, and Chrysler's deliveries rose 11.70 percent. Nissan's truck sales plummeted 46.06 percent in mid-September.

'85-'86 Escort, Lynx, EXP to be recalled

DEARBORN, Mich. — Ford Motor Co. will recall nearly 500,000 1985 and 1986 Mercury Lynx and Ford Escort and EXP models with four-cylinder, 1.9-liter engines, to repair emission-control systems.

The cars were found by the EPA to exceed federal hydrocarbon and carbon monoxide emissions standards.

AUTOCOMP

Controlling your car and truck dealerships has never been easier...for less.

Autocomp is the car management system designed by car dealers for car dealers. Very user friendly, the Autocomp™ system offers multi-user capability with lower cost per terminal and faster payback than the competition. This is one system where you manage the computer, the computer does not manage you. With Autocomp™ you can now easily control every profit center in your dealership.

Hardware and software are readily available for the Autocomp™ system. You have the flexibility of purchasing or leasing, and you can select a comprehensive "total package", or purchase the hardware and software separately.

No computer experience is required. Our system is so advanced, it only requires simple English commands to operate.

Any employee can quickly and easily become a skilled operator.

Put every department on-line so you can monitor inventory control,

order processing, service tracking, workorders, general ledger, accounts receivable, accounts payable, payroll, new and used car stock and more!

Call us toll-free today and ask for our full color brochure. We promise a fast response to your inquiry and a plain English explanation how Autocomp™ can do more and save you more than you ever thought possible.

VW takes sales lead in Europe

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Volkswagen Group outsold Fiat Auto by about 47,000 units in August to take the lead in the European sales rankings for 1989.

Fiat, including the Alfa Romeo and Lancia marques, clung to first place through the first seven months of the year. But the group's 15 percent drop in the Italian domestic market in August enabled VW-Audi-Seat to move in front by fewer than 10,000 units for the eight-month period.

VW holds a narrow 14.8 percent to 14.7 percent edge in market share in 17 Western European countries, according to industry estimates compiled by Automotive News.

Last year, VW overtook Fiat in December to claim first place for the fourth consecutive year.

The overall European market rose 2.9 percent in August to 1,196,300. Eight-month sales of 9,469,900 were up 5 percent over last year.

Except for Italy, Europe's major markets achieved year-to-year gains in August. But the Spanish boom appears to be slowing, with sales off 15.1 percent.

VW Group sales rose 7.6 percent in August to 150,900 units. Sales were up 16.5 percent to 103,900 for the VW brand, which recently began a new value-oriented marketing thrust in Europe by upgrading equipment levels while holding prices.

VW group sales were up 7.1 percent to 1,398,000 for the year-to-date. The VW brand climbed 9.5 percent to 944,200 and Seat improved 8.6 percent to 203,900. Audi sales fell 1.9 percent to 249,900 as the 80/90 compact fell off sharply in Germany this year.

Fiat finished last in August among Europe's six volume makers. Sales totaled 103,600, 8.2 percent lower than the same month last year. In Italy, Fiat fell 14.9 percent for the month to 43,700. Across Europe, Fiat is up 4.2 percent for the year to 1,388,800.

Peugeot SA ranked third through August with a 12.8 percent share on sales of 1,215,400 — a 5.9 percent increase. Sales were down 2.6 percent in August. The group, which comprises the Peugeot and Citroen brands, is capacity constrained.

Ford was the top seller in Europe during the month, taking advantage of the traditional August sales bulge in the United Kingdom where it is the market leader. Ford's European sales jumped 13.3 percent to 191,200 in August — with almost 70 percent of that in the United Kingdom.

Ford improved European sales 7.1 percent for the eight-month period to 1,120,200, an 11.8 percent share.

General Motors, which has grown faster than all other volume makers in 1989, was up 7.9 percent for the year to 1,041,200, an 11 percent share. Sales were boosted by the new Vectra compact model that was introduced last fall.

Renault sales rose 17 percent in August to 110,400 on the strength of its 29 percent surge in the French market.

Renault was up 6.9 percent for the year-to-date to 960,000, a 10.1 percent slice of the market.

BMW continued to lead the way among specialist makers, with sales up 14.4 percent for the year to 278,800. Archrival Mercedes was off 4 percent to 297,500.

JAGUAR

FROM PAGE 1

hold and allows Ford to lobby against early removal of anti-takeover protection as a prelude to a GM deal.

Ford denied it moved to head off a GM deal. GM Europe would not confirm the alleged dealings with Jaguar.

A statement issued by GM said, "GM generally conducts discussions with various companies about possible business transactions. As a matter of common practice, GM does not comment . . . until the company believes it appropriate."

Ford's initiative surprised Jaguar, which called it "unwelcome." After a regularly scheduled board meeting, it vowed to pursue plans to stay independent.

At the very least, it is expected that if Ford snaps up 15 percent, GM will want the same sort of springboard.

Said Lawson, "Ford has sharpened everyone's stance and has possibly made it very difficult for Sir John to unveil a friendly deal with the partner of his choice — which was clearly not Ford and clearly was GM."

"I think Jaguar would prefer GM," said Sanjay Dabysing of DRI-Europe in London. "I think there is a better chance of GM taking only a minority stake, whereas Ford would want to take full control."

While Dabysing reckoned that Ford would move quickly to raise volume, for example pushing for a competitor to the BMW 5 series, he said GM would be less aggressive.

Ford is expected to seek its own friendly deal with Jaguar — reviving talks that are said to have petered out several months ago. Word in London financial circles last week was that Ford regrets the aggressive image created by its sudden move and will take steps so as not to be cut out of a potential friendly agreement.

Meanwhile, Jaguar management has other options, though none seems as promising as a GM link. A defense based on an anti-Ford political campaign — similar to the one that blocked Ford's bid for Austin Rover in 1986 — is possible. But Ford is said to have courted the British government, and Prime Minister Margaret Thatcher has already remarked that a Ford stake could help Jaguar.

Ford also has a large manufacturing presence in Britain, employing nearly 50,000 people in 21 plants. It is the British sales leader, with about 25 percent of the new-car market. Last fall, it announced a £1.8 billion ($2.9 billion) investment program in Britain.

Ford and GM have been putting together track records for the Jaguar battle — buying glorious British marques and leaving them alone. Ford acquired majority stakes in Aston Martin and AC Cars two years ago, and General Motors bought Lotus in 1986.

Jaguar also could seek refuge in the hands of a British non-carmaker — perhaps auto components giant GKN, which has a joint venture for body stampings with Jaguar. Before Ford's initiative, speculation touched on GKN and British Aerospace, which last year bought Rover Group.

"Jaguar would obviously feel that as an operating division of a company doing something else, it would partially cocoon the business," Lawson said.

GKN and Jaguar are viewed within the industry as a good match. But the financial community last week largely dismissed the idea for two reasons: GKN could not match any GM and Ford bids and the company is anxious to reduce its dependence on the auto industry.

Two other possibilities — a management-led buyout and a corporate restructuring to keep predators at bay — are likewise viewed as unrealistic in view of the deep pockets of the U.S. giants.

"I think Jaguar knows it can't stay independent," said Dabysing.

Entry of other makers into the fray is possible. Jaguar has acknowledged talks with several carmakers during the past 18 months. Recent speculation has centered on Peugeot, Volkswagen and, in particular, Volvo. But those companies deny interest and Jaguar may be too rich for their blood. Sources in Turin last week said Fiat is unlikely to bid.

"I don't believe any of the Europeans can justify it financially," Lawson said.

SUIT

FROM PAGE 1

Nester said that in 1979, gasoline shortages caused prices to double at the pump, making Chevrolet Monzas, Chevettes and Citations hot sellers. But Nester said GM withheld them from his dealership.

"I received eight Chevy Monzas in the first seven months of 1979 but the first day Classic opened, it had 40 Monzas," said Nester. "Is it fair to put a competitor out of business just because they are opening a new dealership?"

In another example, Nester said he asked for 100 trucks in February 1979 for a May 1 promotion but never received them. Classic did, however.

"At one point, Classic received one-third of the total allocation of the Cleveland multiple-dealer area," he said.

Nester said he ordered 33 Citations from GM for customers in 1979. Some of his customers never received their vehicles or had to wait for them, yet Classic had 47 Citations in stock the day it opened, he said.

Moreover, the son of the Cleveland branch manager for Motors Holding worked at Classic, as did the daughter of the GM Cleveland zone manager, according to court evidence.

"The distribution system is hokey," Nester said. "There is no reason why a dealer in a multiple-dealer area should not know how models are distributed on a weekly basis."

The 1979 Monza was one of several vehicles a now defunct Chevrolet dealer acused GM of withholding.

Nester also was rankled by GM's slowness in making him a dealer.

He asked to be named a dealer on the Earl Evans Chevrolet franchise beginning in 1975 when he began purchasing it.

But GM held out until 1980 before granting its permission.

"The dealer-operator for Classic was named a dealer with only 14.1 percent share in the dealership," he said. "I owned 55 percent before they would name me a dealer."

Nor could he obtain factory official vehicles while Classic received 25-30 a year at 5 percent below factory cost, according to Nester.

He said GM testified that it shipped Classic 620 fleet cars in 1979 but the dealership had only 12 fleet sales. Classic used fleet allocation for retail sales, said Nester.

"If myself or another dealer tried to do that, you could lose your franchise," he said.

DeVito told the jury GM provided more and more cars to Classic from 1979 to 1981 while Nester received fewer cars, yet their planning potential was roughly the same at 1,000 vehicles.

He said the Evans dealership had profits of $300,000 to $400,000 per year in the five years prior to 1979. Profits dipped to $93,000 in 1980 and the dealership lost $122,000 in 1981 and $180,000 the following year before filing for bankruptcy. Nester filed the lawsuit against GM in 1982.

Nester, who now lives in Pompano Beach, Fla., has sold boats and real estate since the dealership folded. He has been invited to speak before a National Automobile Dealers Association 20 Group on the lawsuit and distribution.

Meanwhile, Classic ranked sixth among Chevy passenger-car retailers and ninth among Chevy truck retailers in the United States last year. Total dollar sales were $102 million with new-vehicle deliveries of 4,649 in 1988.

Says Nester: "Sure, it's one of the biggest dealerships in the nation, but half its sales are from Evans Chevrolet."

AUDI

FROM PAGE 1

"The dealers reacted very positively to the news," the dealer said. "And, honestly, I am very, very pumped about it."

Audi officials told dealers they plan to sell 2,500 cars per month during the 1990 model year, which began Oct. 1.

The sales incentive program outlined by Audi officials is meant to keep strong Audi salespersons within the ranks.

For sales of 60 cars from Oct. 1, 1989, to Sept. 30, 1990, the salesperson will receive a bonus of $12,000 in addition to regular commissions. Should the salesperson sell 120 cars, the bonus would grow to $24,000, plus a week's vacation in Europe.

Historically, Audi has continued to reward salepeople if they leave one Audi dealership for another. This new incentive plan will work in much the same manner.

"Audi is attempting to keep good salesmen," the Midwest dealer said, "and this may just help us get some of our competitor's salesmen to come in and visit us."

As for removing unwanted dealers, Audi officials said they will look at each dealer on a case-by-case basis.

"There was no finger pointing," the dealer said. "They are going to take a hard look at (removing) dealers who are making numbers that are not justified for their market. There was no rattling of sabres."

At the meeting, Audi officials also outlined a plan to distribute wholesale parts at lower costs to dealers, thereby allowing dealers to make a greater profit in the service area.

Allied-Signal prepares Tenn. plant for ABS

CLARKSVILLE, Tenn. — Allied-Signal Automotive has begun construction on a 104,000-square-foot plant for the assembly of Bendix anti-lock braking systems, part of the company's $70 million investment in ABS development.

The plant is scheduled to begin production in December for mid-1990 model year passenger cars.

Employment will start with about 60 employees and increase to approximately 250 in three years as the ABS market expands.

GM adjusts ’89 incentives; Ford joins ’90 parade

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors, which slapped incentives on many of its 1990 models before they were introduced, adjusted incentives on its 1989 models for four of its six vehicle divisions last week.

Ford Motor Co. added two 1990 cars and two 1990 trucks to its customer incentive list. The incentives on 1989 models remain in effect.

Meanwhile, auto analysts disagreed over whether import car companies will join the 1990-model incentive fray anytime soon.

Oldsmobile’s Option Bonus Program on 1990 models has been extended to include 1989 models. The amount of rebate depends on the option package selected. Included in the 1989 program are Cutlass Calais, $700 to $1,100; Cutlass Ciera, $700 to $1,000; Cutlass Supreme, $700 to $900; 88, $200 to $1,000; 98/Touring Sedan, $200 to $1,000; and Toronado/Trofeo, $2,500.

On 1990 Oldsmobiles, the incentives range from $200 to $1,000 and also are tied to the incentive package selected.

The GMC Truck customer incentives of $1,000 on 1990 S-15 pickups and $1,250 on 1990 S-15 Jimmy sport utilities have been extended to those 1989 models, and other 1989s also carry rebates.

They are: Safari compact vans, $500; Rally passenger vans, $500; Vandura cargo vans (excluding Magnavans, Vandura, Specials and Rally Campers), $500; Sierra two-wheel-drive full-sized pickups, $500; R/V full-sized pickups and chassis cab models, $600; full-sized Jimmys, $750; and Suburbans, $750.

Pontiac’s customer rebates on 1989 models include: Grand Am LE, $600; Grand Am SE, $1,000; 6000-LE, $600; 6000-SE $1,000; Grand Prix LE coupe, $750; Grand Prix SE coupe (including Turbo), $1,000; Bonneville LE, $600; and Bonneville SE/SSE, $1,000.

Pontiac dealer incentives on 1989 models are: LeMans, $500; Sunbird, $500; Firebird, $500; 6000, $750; and Grand Prix, Grand Am, Bonneville and Safari, $1,000.

Customer rebates on 1990 Pontiacs also range from $600 to $1,000. The new Grand Prix LE four-door sedan carries a $600 giveback.

Chevrolet’s First-Time Buyer Program offers $600 down-payment assistance on all 1989 and 1990 Geo models and 1989 and 1990 Cavalier, Camaro and Corsica/Beretta cars and S-10 pickups. The following rebates on 1989 models remain in effect: Geo Metro, $400; Cavalier, $500; Camaro, $500; Corsica, $1,000; Beretta, $600; and Caprice, $1,000.

Rebates on 1989 Chevrolet trucks are: Astro Van, $500; G-Van (excludes 03 and 32 models), $500; V-Blazer, $750; Surburban, $750; C-1500/3500 pickup and cab-chassis (2wd only), $500; R/V pickup and cab chassis, $600; S/T pickup, $1,000; amd S/T Blazer, $1,250.

Buyer rebates on 1990 Chevrolet cars are $750 on Lumina sedans and $800 on Geo Prizm and Corsica sedans. The payments on 1990 trucks are $1,000 on S-10 pickups and $1,250 on S-10 Blazers.

Cadillac offers no incentives on either 1989 or 1990 models. Buick has none on 1989s, but it has buyer and dealer incentives on 1990s. The buyer paybacks range from $200 to $1,000, depending on the option package ordered. Dealer incentives — until Nov. 30 — are $1,000 on Riviera and Park Avenue Ultra and $2,000 on Reatta.

While customers may still choose special financing through General Motors Acceptnce Corp. in lieu of rebates, the new rates on the 1989 and 1990 models are not as generous as in previous programs.

Rates are 6.9 percent for 24 months, 8.9 percent for 36 months, 9.9 percent for 48 months and 10.9 percent for 60 months. The previous rate scale started at 2.9 percent.

Incentives for all GM divisions, except the Buick dealer rebate, run indefinitely.

At Ford, the customer rebates are $600 on 1990 Ford Tempo and Mercury Topaz models, $1,000 on 1990 Ford Ranger and $1,250 on 1990 Ford Bronco II.

Instead of the rebate, buyers can choose finance rates of 6.9 percent for 24 months, 8.9 percent for 36 months, 9.9 percent for 48 months or 10.9 percent for 60 months. All except the 60-month rate are less favorable than on 1989 models. No dealer financial participation is required, and the Ford Motor 1990 offers have no cutoff date.

For the time being, import car firms have either stayed the course with their 1989 incentive programs or let them expire.

Dealer incentives on Audi, Mitsubishi and Porsche and special customer finance rates on the BMW 325i expired Sept. 30. Also, Mazda, Isuzu, Honda and Daihatsu did not renew incentives that expired in September.

Ronald Glantz, an auto analyst and general partner at Montgomery Securities in San Francisco, said the Japanese importers are getting ready for “an incentive war.”

“Toyota just raised prices 1.8 percent,” Glantz said. “Considering the dollar value of the yen has fallen 5.4 percent since Toyota raised prices on 1989 models, no price increase was necessary. That suggests that Toyota has the ability for a larger incentive in 1990 than in 1989.

“GM has already thrown down the gauntlet. It seem reasonable to believe that the imports won’t be far behind.”

On the other hand, Mike Kobayashi, an auto analyst for Paine Webber in New York, believes it will be a while before the imports announce major incentive programs. He, too, used Toyota’s price increase as an example.

“Toyota’s price changes amounted to a low price increase; they are pricing their cars more agressively than the Big 3,” Kobayashi said. “They are not prone to direct consumer rebates. They are more prone to dealer incentives. They are not likely to offer incentives right away.”

Chrysler gives up ‘Jeep’ Molnar chase

ALPINE, Wyo. — Fred “Jeep” Molnar can keep the nickname he has used for the last 52 years.

For months, Molnar has been battling Chrysler Corp. Earlier this year, the automaker demanded that he stop using the word “Jeep” as the name of his small tavern because it had purchased rights to the name when it bought American Motors in 1987.

There was a long battle of exchanged letters, telephone calls, lawyers and a trip to Detroit. But Molnar says he recently received a letter from Chrysler acknowledging he has the right to use the name and giving him $3,900 for his expenses.

Molnar said he can use “Jeep” on anything he wants — as long as he doesn’t go into the automotive business.

“I feel relieved,” he said. “I have just as much right to the name as they do.”

He says his father nicknamed him Jeep in 1937, after Eugene the Jeep in the Popeye comic strip and before the word ever became synonymous with the vehicle.

Molnar says he doesn’t know how Chrysler found out about his remote bar. When he got the letter from Chrysler telling him to change the bar’s name, he thought it was a joke.

11 plants idle as '90 sales begin

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Eleven Big 3 assembly plants are fully or partially idle as 1990 model year sales begin.

The Big 3 closed four truck plants, four car plants and the car part of a car-truck facility today. Eight of the nine shutdowns are due to sluggish sales and high inventory.

General Motors closed five facilities; Ford Motor Co. closed one plant and part of another; and Chrysler Motors closed two plants. GM shut two other truck plants last week and they are still idle, making a total of 11 facilities that are completely or partially down.

GM said it will idle its Bowling Green, Ky., Corvette plant for one week and its Wilmington, Del., Corsica/Beretta plant for two weeks due to bulging inventory while its Fairfax, Kans., Grand Prix facility will close for one week due to difficulty with its suppliers.

Also, the following GM truck plants are down because of slow sales: Detroit, until Oct. 9; Pontiac West in Pontiac, Mich., until Oct. 16; and Moraine, Ohio, and Shreveport, La., until Oct. 23. Detroit and Pontiac closed Sept. 25.

Ford idled its Louisville, Ky., medium- and heavy-duty truck plant for one week and also halting output of Cougar and Thunderbird at its Lorain, Ohio, plant for two weeks. Lorain also builds Econolines and Club Wagons.

Chrysler closed its St. Louis LeBaron J and Daytona plant along with its Warren, Mich., light-duty truck facility. St. Louis is slated to reopen Oct. 9, and Warren will resume production Oct. 16.

Automakers scheduled 149,526 cars last week, 1.84 percent below the prior week's 152,335.

Last week's estimated production was split as follows: GM, 45.91 percent; Ford, 24.97 percent; Chrysler, 13.71 percent; Honda of America Manufacturing, 3.67 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 2.90 percent; Toyota Motor Manufacturing U.S.A., 2.50 percent; New United Motor Manufacturing Inc., 2.41 percent; Diamond-Star Motors, 2.17 percent; and Nissan Motor Manufacturing Corp. U.S.A., 1.76 percent.

Truck assembly was 80,512 last week, 748 more than the previous week.

Canadian cars at 14-week high

While U.S. auto workers are being laid off, Canadian automakers scheduled their highest output in 14 weeks.

Last week's targeted build of 22,596 cars was the highest since the week ended June 24, when 22,836 cars were produced. Scheduled assembly last week rose 2.11 percent over the prior week's 22,130 and jumped 8.70 percent over the year-ago week's 20,787.

Truck production was estimated at 20,264 units last week, 0.73 percent below the previous week's 20,413 but 2.06 percent above the year-ago week's 19,855.

Pricing a major factor in '90 market battle

Toyota Celica, Lincoln Town Car and Chevrolet Lumina APV represent the different directions automakers will take as they try to build market share in a difficult 1990.

AUTOMOTIVE NEWS **JOE WILSSENS**

By Dutch Mandel
AUTOMOTIVE NEWS STAFF REPORTER

The automotive pricing game for 1990 is part of an intense struggle for market share in a down market that will include continued reliance on incentives.

The Big 3 face the hardest battle, having raised prices an average 4.7 percent, much of it to amortize legislated safety costs. Asian imports, helped by currency exchange rates, covered the cost of air bags and passive seat belts with a 2.7-percent increase, and some Europeans managed price reductions.

"Definitely, 1990 will be market-share driven," said Christopher Cedergren, senior market analyst for J.D. Power and Associates, Agoura Hills, Calif.

In 1990, all manufacturers must install passive restraints as standard equipment. For U.S. automakers, that can mean from $350 for the motorized belt system, as in Ford products, to as much as $1,000 for air bags. Chrysler intends to have air bags standard in all its U.S.-built cars.

The dollar's strength provides pricing advantages to foreign carmakers. "The dollar has picked up strength against major currencies, and it gives foreign companies margin to play with in their pricing," Cedergren said.

The exchange rate advantage has allowed German and Japanese automakers to include passive restraints without significant price increases.

Cedergren said that despite creditable efforts by Volkswagen to cut 1990 prices and eliminate rebates, it's likely other automakers will continue cash incentives in one form or another.

"I think everybody will continue with incentives," he said. "Incentives are almost like hard drugs: Once you get on, it's very hard to kick the habit."

He predicts the domestic, Japanese and European automakers will offer rebates. He said even European luxury makes will offer "more sophisticated incentive programs that don't diminish the nameplate," such as leasing programs and low-interest financing.

And those incentives will increase as inventories increase.

In 1990, transplants will come up to speed. They intend to build about 500,000 more vehicles in 1990 than in 1989, and the Japanese will likely maintain imports at 1989 quota levels. Meanwhile, J.D. Power anticipates new-car and truck sales in the 1990 calendar year will be total 14.4 million, down 300,000 from 1989.

The fight, said Cedergren, will be for market share. "The bottom line," he said, "is that this is a new era in selling cars."

Ford watchdogs will work with suppliers to cut costs

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — In its battle against rising material costs, Ford Motor Co. plans to set up a full-time cost reduction group in its North American automotive operations.

The group will work with suppliers to redesign and reformulate some of the components Ford buys.

The new program will be established by the end of the year. It is patterned after a similar program at Mazda Motor Corp. in Japan, called DRILL, or "drastic reduction innovation of all."

Spencer

The three-year-old Mazda program seeks a 30 percent reduction in material costs over a four-year period. Ford believes Mazda's target is "ambitious" and that a cut of that magnitude could frighten Ford suppliers.

The Ford action is "a drastic reduction program but it isn't a bludgeoning; we are looking to take costs out," said Alan Spencer, executive director of NAAO production purchasing. He said Ford has no specific cost reduction target as yet.

According to Ford, the program is not designed to cut suppliers' margins; it is simply an effort to help vendors reduce overall costs.

One Ford supplier, who spoke on the condition of anonymity, said the program is long overdue. He said Ford has not looked at costs as closely as its competitors.

In some cases, components may be redesigned or manufactured differently. The supplier may discover that the component can be made from different materials to reduce its cost.

Spencer admitted that redesigning or reformulating a part may cost the supplier extra time, but he claimed it will be beneficial in the long run because costs will be cut.

But one Ford supplier said that suppliers have suggested new ideas for components in the past but have been stymied by an enormous amount of red tape. Every new product, according to the source, must go through Ford's testing labs, but ideas often are killed before the lab sees them.

Spencer said Ford encourages its suppliers to work with their own vendors — or so-called "third-tier suppliers" — to reduce parts costs.

A key factor in deciding which parts can be redesigned or reformulated is the tear-down study, in which Ford and competitive vehicles are torn apart piece by piece. Each part is examined, weighed and measured. Ford estimates the cost of each part.

Ford is encouraging its suppliers to conduct their own tear-down studies to determine if changes can be made in the part they are producing for Ford.

Ford does not believe that every part on every vehicle can be redesigned to reduce cost. And it will take time to change parts that can be changed.

In some cases, Ford may have to wait until the next generation of a particular vehicle.

Ford has identified four areas that it believes are prime fields for cost reduction: wiring; bumpers, interior trim (seats and door trim) and instrument panels. A fifth may be powertrains, Spencer said.

Ford purchases its bumpers, interior trim and instrument panels from suppliers outside and inside the company. All wiring products are purchased from outside firms.

In addition to reducing costs, Ford continues to ask suppliers for a productivity improvement of 5 percent for each year of their contract with the automaker.

Supplier sources say Ford is putting more pressure on suppliers to sign the productivity pacts, but some suppliers with unique products (not available from any other source) have not signed the agreement.

Price increases for the products Ford purchases are based on productivity improvements minus inflation.

Audi 100 posts lowest injury score

By Diana T. Kurylko
AUTOMOTIVE NEWS STAFF REPORTER

WASHINGTON — The Audi 100 has registered the lowest head injury score of any vehicle used in NHTSA's 35 mph crash program.

The air-bag equipped luxury sedan had a driver head injury score of 185. That compares with scores ranging from 541 to 1,421 on eight other mid-sized and full-sized 1989 cars crashed by NHTSA — two of which also had air bags. The Audi's passenger head injury score, 710, was comparable to other cars crashed.

One of Audi's harshest critics, Clarence Ditlow, director of the Center for Auto Safety, praised the car's performance.

"It shows what we've been saying all along — that when you add an air bag into a car with good energy-absorbing structure, you'll get good scores," he said. "Other manufacturers should follow" Audi.

Federal rules that took effect last month require all 1990 model cars sold in the United States to carry either a driver's side air bag or automatic seat belts. Through 1989, few air bag-equipped cars have gone through NHTSA's program. For the 1990 model year, about 75 U.S. and import models have a standard driver's side air bag.

NHTSA crashed 35 vehicles during the 1989 model year in its experimental New Car Assessment Program. A two-door Dodge Daytona hatchback had the second-best head injury score, 399.

The Audi 100's predecessor, the Audi 5000, had a driver head injury score of 2,105 and a passenger score of 557 when it was crashed during the 1985 model year. It did not have an air bag.

Under NHTSA's program, cars are crashed into a fixed barrier at 35 mph. The impact is equivalent to a head-on collision between two identical cars traveling at 35 mph or a crash between a parked car and another moving at 70 mph.

The crash produces one-third more force than the 30 mph test used to certify all new cars sold in the United States. In that test, a head injury score of 1,000 or above and a G force of 60 or higher in the chest score is considered fatal to the vehicle's occupants.

The Audi 100 chest deceleration score was 35 G's for the driver and 31 G's for the passenger, also record lows.

NHTSA engineers would not comment on the significance of the scores. NHTSA calls the crash program experimental because it only measures the force of a car during a frontal collision into a fixed object.

Ditlow has been a critic of Audi's 5000 model, which he said is prone to unintended acceleration. A NHTSA study, however, concluded that the phenomenon is caused by drivers mistaking the accelerator for the brake pedal.

NHTSA 1989 NEW- CAR CRASH ASSESSMENT

AUTO ZEITUNG

The F-type Jaguar could be in production by summer 1992.

Jaguar F-type ahead of schedule

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Despite doubts about financially troubled Jaguar's ability to bring out a successor to the legendary E-type, supplier sources in Europe confirm that the sports car project is not only alive but ahead of schedule.

Component orders indicate that the so-called F-type is much farther along than once believed and could be in production by the summer of 1992 — 18 months earlier than expected.

Jaguar reported an operating loss of £2.8 million ($4.5 million U.S.) in the first half of 1989 and some analysts question whether it has sufficient resources to put the car into production without the backing of a new owner.

Jaguar Chairman Sir John Egan has said he is committed to going ahead with new-model plans despite financial problems, though he has said there may be adjustments.

Plans for a long-wheelbase version of the XJ6 sedan were delayed earlier this year to give the sports car higher priority, according to sources familiar with the project.

The long-awaited 2 + 2 will give Jaguar three lines and will fill the gap left by the XKE that was discontinued in the 1970s. Annual production of 15,000 to 20,000 units is expected.

A front-mounted twin-turbo, six-cylinder engine putting out 350 horsepower is said to top the power offering, though the F-type is designed to accommodate a Jaguar V-12.

Japanese transplants lead building boom in parts field

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

A building boom led by Japanese transplant parts makers is still in full swing in the auto supplier industry despite worries about auto plant overcapacity in the 1990s.

Due primarily to new business from expanding Japanese automakers in the United States, as many as 50 new parts supplier plants have gone up in the past year. At least 20 more will be opened in the next two years.

Most of the expansion involves transplant parts makers and U.S.-Japanese joint ventures. According to one estimate, transplant suppliers will have opened more than 360 facilities by 1991, constituting one-tenth of all U.S. parts-making facilities.

But the question being asked throughout the industry is whether the transplant invasion is over.

The U.S. Automotive Parts Industry Office, a Tokyo trade office operated by the Motor and Equipment Manufacturers Association and the U.S. Commerce Department, estimates that 45 Japanese suppliers will open wholly owned plants or joint ventures this year, down from 68 in 1988. Earlier this year, Automotive Parts International, a Washington research firm, also reported that openings of new foreign-owned parts plants had slowed from an early 1988 peak.

AUTOMOTIVE NEWS/JOE [illegible]

Macosko sees a slowdown in supplier moves.

"The accepted estimate for the last few years was that there were about 300 Japanese parts companies that wanted to open U.S. production facilities," said Gregory Macosko, a partner with Easton Consultants of Hopkinton, Mass., who monitors transplants. "At this point, most of those that are going to come have now done so. We really don't see too many more suppliers coming over."

The growth of the transplant auto-assembly sector continues to be the stimulus for the supplier industry expansion now in progress among both U.S. and foreign companies.

Subaru-Isuzu Automotive recently opened its 120,000-vehicle-a-year plant in Lafayette, Ind. Nissan Motor Manufacturing is embarking on a $490 million project to produce an additional 220,000 cars a year in Smyrna, Tenn.

Diamond-Star Motors, which started production last year, is gearing up to build 240,000 Chrysler and Mitsubishi vehicles annually in Normal, Ill. Honda has also just opened its second U.S. car plant in East Liberty, Ohio, to produce another 150,000 cars a year. It is also expanding production at its Anna, Ohio, engine facility.

Toyota began building Camrys in Georgetown, Ky., last year and will soon start up a

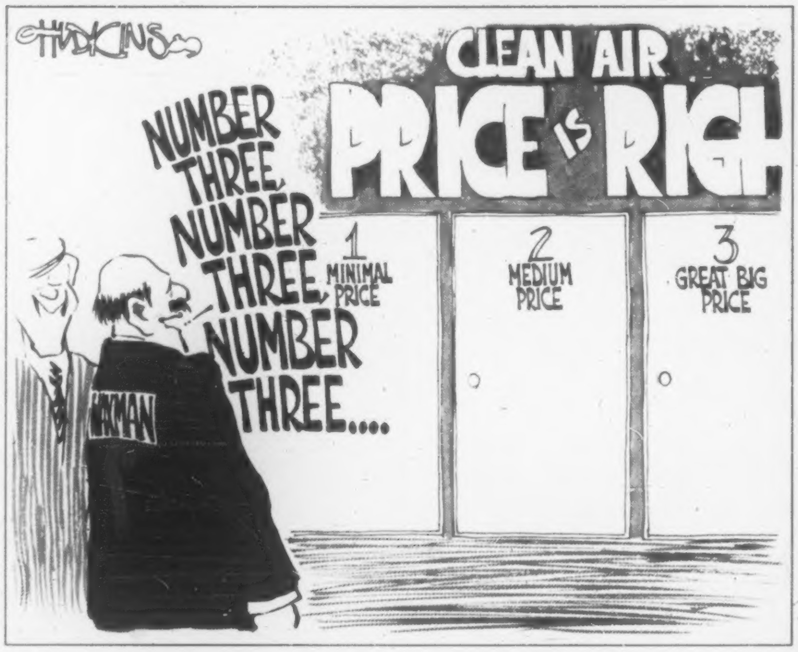
OPINION

A tough compromise on clean air



Rep. John Dingell, D-Mich., discovered the limits on permissible automotive pollution last week. In the political climate of late 1989, those limits are outside the comfort zone of the Big 3 automakers.

Dingell, Detroit's powerful point man in Congress, made a historic compromise with Democratic Rep. Henry Waxman, California's anti-smog point man in Congress. At first glance, industry watchers might ask: "What compromise?"

Amendments to President Bush's proposed clean-air bill have consistently been defeats for the industry position. The automakers weren't keen about the Bush plan, but they said they could live with it.

Now, the Dingell-Waxman agreement calls for tighter tailpipe standards, 100,000-mile warranties on emissions systems, extension of car standards to light trucks and a requirement for canisters on cars to trap fuel vapors now lost at the pump. (Vapor traps ought to be on gas pumps, not cars, so the problem can be eliminated in months rather than decades.)

In the post-Reagan era, Dingell had to consent to all those things or risk finding himself an irrelevant voice outside the mainstream.

If the compromise has a bright side for the industry, it is that clean-air legislation is moving forward more surely. There is no technological barrier to meeting any of the proposed standards. The barriers are economic — several hundred dollars per car. But the one thing the industry needs is a clear set of standards and a clear, realistic timetable to meet them. And the Dingell-Waxman accord suggests that the legislative process will come up with clear standards in a few months and that the timetables will be realistic.

The automakers' biggest concern about the events last week centers on the 100,000-mile emissions-system guarantee, which doubles the current time frame. How many millions of dollars might go down the drain on a recall of cars with 80,000 miles on them?

Unfortunately, new cars have a way of becoming old cars. And old cars spew a disproportionate amount of pollution into the air. The industry itself has been blaming old cars for most air problems.

Automakers need to keep on slugging to be sure Congress cleans the air efficiently and doesn't merely penalize the industry and its customers. The fuel-vapor canister issue, for instance, smacks more of "getting" the auto industry than of trying to clean the air.

The Big 3 criticized last week's changes as expensive rules that will have only a tiny effect on air quality. But the automakers didn't go overboard: They didn't say it can't be done, and they didn't predict the end of prosperous free-market economies.

Like John Dingell, they have learned to compromise.

LETTERBOX

VW did it in the '70s

Your article covering Mercedes-Benz's intent to open a California design center in 1990 was most interesting. The statement that it will be the first-ever U.S. studio that will be opened by a European carmaker is incorrect.

Volkswagen of America had a completely facilitized design studio operating in America from late 1976 until 1984 or later.

The studio was staffed by U.S. designers, clay molders and stylists under the direction of Bill Maypole, a previous member of the General Motors design staff. Maypole reported to Duane Miller, VW's vice president of engineering.

This group made major contributions to the longevity of the U.S. Rabbit, Golf and Jetta, including design of one-piece headliners and new instrument panels with integral air conditioning.

Other achievements included the first U.S.-made GTI, development of square headlights on the Rabbit and Jetta models, interior panel design and color coordination and the complete design and styling of the first small pickup truck made in the United States by any manufacturer.

This group also contributed to the development and advanced planning of the first Audi 5000 vehicle.

Unfortunately, the studio was dissolved as a result of a management change in Germany in 1982 that changed VW's previous policy to manufacture where they sell in major world markets.

J.W. McLernon
Bloomfield Hills, Mich.

J.W. McLernon was president of Volkswagen of America from 1979 to 1982.

We invite letters from our readers. Unsigned letters will not be considered, but you may sign your name with the assurance that it will not be used if you so request. Address letters to: Letterbox, Automotive News, 1400 Woodbridge Ave., Detroit, MI 48207. Our fax number is (313) 446-0383.

Never over sticker

As a California automobile dealer with 11 franchises, I would like to applaud your Sept. 11 editorial suggesting that dealers should be happy when they can sell cars for sticker price and not gouge the public above that.

Our company has had a policy since 1984 that we never charge over manufacturer's suggested retail price plus a reasonable charge for accessories, if any. We also will make a car available without accessories if the customer wants it that way and never force accessories on the customer.

Among the franchises we hold are Mazda and Porsche, and this policy has definitely had a negative short-term effect on earnings with cars like the Mazda Miata and the Porsche Speedster.

It has been aggravating at times when we discover that customers have purchased cars at the window sticker price, only to act as brokers and resell the cars for a higher price within a matter of days or weeks.

It is time that we, as dealers, start taking a longer-term view of our business, our industry and our image.

Although our current "no over sticker" policy gives us a competitive advantage against virtually every dealer around us, I welcome other dealers to join us in this position and hope to improve the public's perception of our profession and our dealerships.

Obviously, we believe that in the long term, we will be better off for not having sold over sticker.

John B.T. Campbell III
President
Campbell Automotive Group
Irvine, Calif.

Customers don't forget

I am replying to the letter from Jon Shultz in your Oct. 2 Letterbox.

Concerning the issue of whether to gouge or not to gouge the public when you have a chance to make a home run by boosting stickers on hot merchandise:

I am no longer a General Motors dealer, but the dealership I recently sold was in the family for 50 years, and I am happy to say that we did not take advantage of our customers by jacking up the window-sticker price. Many times, you never find out if you gained or lost in the eventual shakeout. But here is our experience:

All through the years, I had a customer who could buy the most expensive auto on the market, but he stayed with us, buying one Buick Electra after another.

One day I broached the subject of why

Winnebago's new front-wheel-drive route van

Winnebago moves into commercial field

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

Limited opportunities in the RV market, stemming from its maturity and cyclical nature, are leading Winnebago Industries to diversify into commercial-vehicle products.

Winnebago of Forest City, Iowa, established a commercial vehicle division to field new products such as the front-wheel-drive route van it will introduce in November.

Richard B. Carlson, the division's vice president and general manager, said the company has also begun signing dealers.

Midway Ford Truck Center in Kansas City, Mo., and Liberty Ford in Philadelphia, were the first dealers to sign sales and service agreements to handle Winnebago's route vans.

Carlson said the goal is to sign one successful truck dealer in each of the top 100 major metropolitan areas during the next two years.

Most are expected to be light- and medium-duty dealers, since Winnebago's commercial vans will be positioned at the high end of Class 2 and in Class 3.

Carlson added that the firm will not exclude heavy-truck dealers from consideration, particularly those with a good fleet business.

Winnebago's goal for its new route van is to capture 10 percent of a 20,000-unit market that consists chiefly of bakery, snack food, parcel package delivery and industrial laundry delivery vehicles.

Winnebago has designed and will produce its own chassis and van bodies for its route vans. That puts it in competition with General Motors, Ford Motor Co. and Oshkosh Truck Corp. of Oshkosh, Wis., which are the primary chassis suppliers to vehicle manufacturers in that market.

Winnebago also will compete with commercial body manufacturers like Utilimaster Corp. of Wakarusa, Ind., and Grumman Olson of Sturgis, Mich., which produce vehicles on chassis supplied to them.

The design of the Winnebago route van is geared to easy entry and exit and spacious, flexible interior cargo capacity.

The fwd design of the new W-series vans enabled the company to give them an 18-inch floor height. Competitive models have floor heights of 31 to 35 inches.

Four versions of the van will be offered. One, the W950, has a high ceiling that enables the vehicle to carry 928 cubic feet of cargo, about 150 cubic feet more than standard vans built on Detroit chassis.

Other versions are the W650 with 664 cubic feet of cargo space, the W750 with 721 cubic feet of space and the W850 with 856 cubic feet of space.

The heights of those models range from 84 to 110 inches. Where cubic space is not critical, an operator can select a model with a lower height, which reduces frontal area and improves fuel economy.

Winnebago's chassis is built on a heavy-duty 50,000-pounds-per-square-inch rail frame. It features a Cummins turbocharged 105-horsepower 4BT diesel engine, Borg Warner T19 manual four-speed transmission, ZF front-drive axle and ZF transfer case.

The Cummins 120-hp 4BTA diesel and Ford 5.8-liter gas engines are options.

Carlson said the vehicles have not been priced.

The company is providing service backup for the vehicles through GE Capital Fleet Services of Eden Prairie, Minn.

GE's nationwide emergency breakdown service complements the network of sales and service dealerships Winnebago is setting up. Winnebago has four regional parts depots to supply dealers.

RV shipments to dealers dip 2% for month

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

RV wholesale shipments to dealers totaled 31,900 in July, down 2.45 percent from 32,700 a year earlier, according to the Recreation Vehicle Industry Association.

Van conversions are largely responsible for the industry's high seasonally adjusted annual selling rate of 394,0000 units.

They were the only vehicle category to increase during July and for the first seven months of calendar 1989.

Van conversion shipments totaled 16,500 in July, a new monthly record, up 2.48 percent from 16,100 a year earlier.

Their seven-month total of 123,800 was up 2.57 percent from 120,700 last year.

Van conversions accounted for nearly half the industry's total 249,300 shipments during the first seven months. That total was off 4.30 percent from 260,500 a year earlier.

Raw chassis shipped by Detroit van manufacturers to converters indicated a slowdown of conversion activity for August and September.

General Motors, Ford Motor Co. and Chrysler Motors shipped 9,400 seat-delete vans to converters in July, 38.96 percent fewer than the 15,400 shipped in the 1988 month.

For seven months, Detroit shipped 127,200 seatless vans to converters, 0.55 percent more than last year's 126,500.

In July, the slowdown in raw chassis shipments was slightly greater for full-sized vans than for compact models.

During July, Detroit manufacturers shipped 7,200 full-sized vans to converters, 38.98 percent fewer than last year's 11,800.

It also shipped 2,200 compact chassis, 38.89 percent fewer than the year-ago month's 3,600.

Detroit shipped 98,500 full-sized chassis to converters during the seven-month period, up 1.23 percent from 97,300 a year earlier.

During the same period, it shipped 28,700 compact vans, off 1.71 percent from 29,200 a year earlier.

Non-van conversions help GMC set record

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

GMC Truck sold a record number of RV conversions during the 1989 model year, primarily because of increases in the number of Sierra pickups, Suburbans and Jimmys upfitted by its consignment pool accounts.

Increased conversions of those non-van products also helped four new companies make GMC's list of top 10 pool accounts, according to Keith Ball, GMC manager of special vehicle sales.

New to the top 10 are: Explorer Van Co. of Warsaw, Ind.; Van American of Goshen, Ind.; Trailmaster Vehicles of Fort Worth, Texas; and Chattanooga Custom Center of Chattanooga, Tenn.

Rounding out the top 10 are: Starcraft Corp. of Goshen, Ind.; Glaval (Autoform) of Elkhart, Ind.; Utilimaster/Holiday Rambler Corp. (Aviator) of Wakarusa, Ind.; Gulf Stream Coach (Monogram, Conquest) of Goshen; Bivouac Automotive and Bivouac Commercial of Vandalia, Mich.; and Sherrod Vans of Jacksonville, Fla. Sherrod's Victory Vans operation is in Fort Worth.

Even companies most traditionally linked to vans, such as Starcraft, are now heavily involved in converting Sierra pickups and Suburbans, Ball said.

GMC has been forced to seek its growth in those alternative vehicles because of a limited supply of van chassis.

"We had to turn down some people who wanted bailment because we didn't have enough product for them," Ball said.

> **"We had to turn down some people who wanted bailment because we didn't have enough product for them."**
>
> **KEITH BALL**
> **GMC**

He doesn't expect that to change in the short term. There are no extra van chassis on GMC's schedule for the 1990 model year.

"But as our sales rate does well, and others don't do as well, we'll receive more and more. You have to build toward getting more product," he added.

GMC reached a new model-year record for retail sales of upfitted vehicles in August, and every sale in September was that much over its objective, Ball said. He declined to provide specific numbers.

Ball said he thought 1990 would "a flat year." He said he continually analyzes GMC's pool accounts because of their volatility.

The disappearance of companies that run into trouble forces the division to bring in new accounts.

"I analyze companies' performances continually and talk to people daily," Ball said. He watches the retail sales of converters' products to see how fast they sell on dealers' lots. That is the primary basis on which additional allocation is decided.

"It's a very equitable system. Those that move it, get it. The bailment companies are very happy with that. Obviously, they're very aggressive," Ball said.

To some extent, he also watches how much product converters sell to dealers at the wholesale level, "but that's just building up dealer inventory. It's just a stage in the sales process."

GMC has signed some strategic new accounts. Since beginning its focus on pickup and sport-utility conversions, it has looked at new accounts from a regional standpoint, considering such things as freight and shipping costs.

"You may already have a real good pickup outfitter, but a new one, even if he's not quite as good as the original one, may have an edge because of the freight factor. You can't ship vehicles across the country. The cost is much too prohibitive," Ball said.

On the other hand, he concluded, "You can't keep adding new converters in a region. You get to a point of diminishing returns. On pickups, we're locked into geographic considerations."

RVIA re-elects five directors; technician training scheduled

RESTON, Va. — The Recreation Vehicle Industry Association re-elected five members of its 21-member board of directors to a second term that began Oct. 1.

The board members re-elected are: Allen Yoder Jr., president of Jayco Inc. in Middlebury, Ind., chairman; Melvin Adams, president of Coleman Co.'s RV Group in Wichita, Kan., vice chairman; H. Wayne Dahl, president and chief operating officer of Holiday Rambler Corp. in Wakarusa, Ind., second vice president; John Casey Jr., president of Shurflo in Santa Ana, Calif., secretary; and Stepen Decker, president of Skamper Corp. in Bristol, Ind., treasurer.

The directors will serve one-year terms. They, along with Don Cuzzocrea, president of Starcraft Corp. in Goshen, Ind.; RVIA President David J. Humphreys; and RVIA General Counsel Jerome C. Loftus, make up the association's executive committee for 1990.

RVIA said it plans to establish the National Recreation Vehicle Technical Institute next year.

The purpose of the nationwide program of education and training is to attract more and better-qualified service technicians to the industry.

The institute will offer a network of standardized, competency-based training courses for RV service technicians in community colleges and technical institutes.

Scheduled to begin in September 1990, the program is designed to help offset a widely predicted labor shortage that may reduce the number of qualified RV service technicians in the next decade.

The institute's first preparatory training courses will be offered in central Florida; Elkhart, Ind.; and Southern California.

Major decline in exports boosts auto trade deficit

WASHINGTON — The U.S. trade deficit for passenger cars and light trucks increased 7.7 percent in June because of a 39.8 percent drop in the value of exports. The value of imports declined 1.8 percent for the month.

The latest figures from the U.S. Commerce Department show the automotive trade deficit in June was $3.87 billion compared with a deficit of $3.60 billion in June last year.

The U.S. balance of trade in finished vehicles has been worsening throughout the year, despite a generally encouraging improvement for American trade overall. The total U.S. trade deficit was $8.2 billion in June, down 22.9 percent from a year ago.

The annualized U.S. automotive trade deficit grew 2.0 percent in June to $45.14 billion. The deficit for the 12-month period ended June 1988 was $44.27 billion.

June's big drop in the value of U.S. exports was reflected in a 46.5 percent decline in the value of passenger-car exports to Canada and a 32.9 percent drop in the value of passenger-car exports to countries labeled "others" by the Commerce Department. The value of passenger-car exports to Japan increased 2.2 percent in June.

The value of light-truck exports fell 30.7 percent in June, led by a 71.6 percent drop in the value of exports to countries identified as "others" and a 17.7 percent drop in the value of light-truck exports to Canada.

During the most recent 12 months, U.S. exports have fallen 10.1 percent, from 885,655 units in the year ended June 1988, to 796,416 in the year ended June 1989.

Imports of cars and light trucks also declined on an annualized basis, but from a much higher base. The number of vehicles imported for the year ended June 1988 was 5.41 million. That number fell to 5.20 million units for the year ended June 1989.

Imports in June 1989 totaled 339,116 cars. June imports of light trucks totaled 76,075 vehicles.

Imports of Japanese passenger cars in June were 168,631, up 0.9 percent over 167,077 a year earlier. Imports of Japanese light trucks fell 22.9 percent to 35,493 from 46,025.

Imports of cars from Canada were down 17.2 percent, while Canada's truck shipments to the United States jumped 37.1 percent.

West German car imports fell 29.5 percent in June to 11,395 units, after a 22.3 percent increase the previous month.

The number of cars shipped from South Korea increased 10.2 percent in June to 22,907.

Swedish car imports fell 29.5 percent to 7,409 in June, although Swedish imports were up 2.6 percent on an annualized basis.

Mexico sent 38.9 percent more cars to the United States in June, while Yugoslavia shipped no cars to the United States that month.

Car shipments from the United Kingdom were down 33.5 percent from June a year ago. Italy shipped significantly more cars to the United States in June, 921 compared with 199 a year ago. But Italian car imports were down 2.9 percent on an annualized basis.

In June, 655 cars were imported from France, compared with 768 last year. French imports were 15.6 percent below last year's annualized tally.

Brazilian car shipments were up 101.3 percent to 6,437 in June, but down 32.2 percent for 12 months.

Nations classed as "others" exported 1,346 passenger cars to the United States in June compared with 1,792 a year earlier. On an annualized basis, those shipments increased 32.7 percent.

Classic Caddy grille

E&G Classics, Columbia, Md., offers a custom grille for the Cadillac Brougham, model years 1980-1990. Estimated retail price is $767.

GM, Robotic Vision sign pact

HAUPPAUGE, N.Y. — General Motors has signed an agreement with Robotic Vision Systems that provides nearly $2 million in financing and extends and modifies a warrant held by the automaker.

The agreement provides Robotic Vision Systems with a $700,000 contract for work related to the company's newest product, a three-dimensional surface mapper. The surface mapper will be used in all phases of GM's manufacturing including design and assembly.

The agreement also provides the firm with $1.1 million in short-term financing.

As part of the deal, GM extended and modified its warrant that covers about 1.1 million Robotic Vision Systems shares. The warrant was to expire Dec. 12, 1989. The new agreement extends the expiration to Dec. 12, 1993. The $7 per share price was increased to $9.67 to reflect Robotic Vision Systems' current growth expectations.

GM owns about 19 percent of Robotic Vision Systems, a maker of inspection systems.

MAZDA

FROM PAGE 1

to schedule more overtime during the early production of the new 626 to repair a huge backlog of defective and unshippable cars. In exchange, Local 3000 bargainers held out for a new attendance policy and other changes they had sought for some time.

UAW members at Flat Rock are voting today on provisions that will give them 15 days of no-fault absences per year. Under one option, workers would receive 60 percent pay for all 15 days.

Under a second option, they would receive 60 percent pay for four days. The remaining 11 days would still be considered "no-fault" — that is, time off without a required excuse. The current good-attendance bonus of $500 would be tripled to $1,500.

The workers' third option is to retain the current policy.

A Mazda spokesman denied the buildup of unshippable cars caused the change. "There is no connection between the cars that are in the reprocess system and the current negotiations," the spokesman said. "That is tied to supply of parts and our policy of not letting cars out the door without having them in top Mazda quality condition."

Current negotiations are part of the launch process, the spokesman said. "Nobody is holding anything over anyone's head. There are a number of issues that needed discussion and this is part of the process. We have encouraged our employees to tell us what they think. We look at it as an improvement in the process — having employees tell us where improvement needs to be made," he said.

In the negotiations that led to the vote, Mazda also promised to hire temporary employees — the controversial "support members" — if they have been on the job for 90 days.

Some 135 support members were hired Oct. 1, and the company pledged to review the status of temporary employees monthly. Support members are paid less and have fewer union rights. They are deployed as needed throughout the plant.

Previously, some support members had worked overtime up to nine months without achieving regular status. That gave rise to bitter accusations that the union had caved in to management in allowing second-class status for support members.

Local union officials at Mazda who ran on the dissident New Directions slate credited their gains to the support of Bob King, the new director of UAW Region 1A. The international's support of the local officials, who won their posts early this year by defeating candidates appointed by the former regional director, Ernest Lofton, may be a sign the UAW is prepared to back stronger union demands at unionized transplants.

That the gains were won at a transplant with new local leaders make them "particularly interesting," said Harley Shaiken, professor of work and technology at the University of California at San Diego. "That combination raises important issues with the entire industry. This is not quite on the eve of the 1990 (contract) talks, but it's close," said Shaiken.

Shaiken said the new provisions are a breakthrough. "They reflect the strength of the local union and the fact that Mazda wants to have a constructive relationship with the local and is willing to provide the workforce an important level of flexibility.

"Flexibility is a term we've come to associate strictly with managerial prerogative, and here Mazda appears to be giving their workers an important degree of flexibility," he said.

Bargainers from UAW Local 3000 at Flat Rock won the new rights and others in exchange for "relaxed launch language" during the launch of the Mazda 626, said Greg Drudi, bargaining chairman.

Following a buildup at one time of nearly 4,000 carsthat needed repairs, Mazda sought and won the right to schedule overtime seven days a week for 250 repairmen until Thanksgiving.

Parts shortages and defective parts caused the buildup of unshippable cars, Drudi said. The situation recalls earlier problems Mazda experienced with suppliers.

In March 1988, Mazda President Osamu Nobuto, in widely publicized comments to the University of Michigan's International Automotive Industry Conference, complained about local suppliers, saying Americans have tolerated late deliveries as a way of life.

Nobuto also told the conference that the parts defect rate for local American firms "is anywhere from three to five times higher than among Japanese firms."

Drudi said the defective and missing parts included mirrors and visors.

It is not known if Ford Probe and Mazda MX-6 production at the plant has been affected by the parts problem.

Negotiators at Flat Rock originally settled on the first absence program option (15 days at 60 percent pay with no fault) early in September, which was to have begun Oct. 1. But in the intervening weeks the number of unexcused absences soared at the plant, as workers learned they would be starting with clean slates Oct. 1.

"There were so many absences they almost couldn't run the plant," said a local UAW official who did not wish to be identified. "People were blowin' off days. That's an indication of the morale here. Happy campers don't skip whenever they can," he said.

Management, including Nobuto, then pushed for the second option, which puts a premium on attendance by tripling the good attendance bonus.

The Mazda spokesman said, "The attendance level at the Mazda plant is better than or equal to industry standards. However, we aren't satisified with that, and I don't think anyone can be satisfied with industry standards. All employees understand that the success of the operation depends on their active participation. We have an ongoing commitment to carry on ongoing discussions. This absentee question is part of our negotiations."

Since the union contract prohibits strikes for any reason, the workforce's right to take days off without penalty could prove an alternative weapon during disputes. But Shaiken said, "Having the ability to take the days off doesn't necessarily mean they will be used in a disruptive way."

On the contrary, Shaiken believes Mazda's new program could actually improve morale and labor relations at the plant. Mazda's decision to change attendance policy "moves in a different direction than some of the changes we've seen in transplants and the Big 3 where the trend has been towards increased workforce discipline rather than some openness. This may work in Mazda's favor.

"The ironic result is it gives Mazda more stability with its workforce," Shaiken said.

Model year shows slight output gain

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. and Canadian car and truck production rose slightly in the 1989 model year from the 1988 model year.

The two countries' car and truck makers built 13,050,930 units, 0.36 percent more than the 13,003,848 built in the previous model year.

Both car and truck output increased 0.36 for the 1989 model year. Car output rose 28,516 units to 7,941,090 compared with the 1988 total of 7,912,574. Truck output was 5,109,840, compared with 5,091,274 in the 1988 model year.

In the 1989 model year, transplant and joint-venture companies accounted for 8.62 percent of the units or 1,125,636 cars and trucks. The figures jumped from 6.26 percent or 813,667 cars and trucks produced in the 1988 model year.

With the Big 3 and Navistar International reporting production decreases, the transplant and joint-venture makers posted the only increases for the model year.

General Motors' output of 5,628,153 cars and trucks in the United States and Canada fell 0.76 percent from 5,671,388 in the 1988 season.

Ford Motor Co.'s vehicle output totaled 3,891,925 units, 3.52 percent below the previous model year's 4,033,959, and Chrysler Motors' output of 2,147,974 dipped 2.75 percent from 2,208,711.

Navistar International's plants in Springfield, Ohio, and Chatham, Ontario, produced 93,491 trucks during the model year, 2.18 percent below the 95,571 built in 1988.

Honda, which assembles cars in Marysville, Ohio, and Alliston, Ontario, and is the largest of the transplant companies, built 418,952 cars during the 1989 model year, up 5.72 percent from the 1988 total of 396,284.

Mazda Motor Manufacturing (U.S.A.) in Flat Rock, Mich., built 228,756 U.S. cars in the model year, more than double the 1988 total of 105,616.

Nissan Motor Manufacturing Co. U.S.A., in Smyrna, Tenn., reported production of 206,427 cars and trucks in the model year, 6.87 percent more than the 193,160 built last year.

New United Motor Manufacturing Inc. built 153,080 cars at its Fremont, Calif., plant, 36.64 percent above the 112,034 cars assembled in the 1988 model year.

Toyota, which builds cars in Georgetown, Ky., and Cambridge, Ontario, assembled 118,421 units. Toyota did not produce cars at Georgetown in the 1988 model year and did not report Cambridge production that year.

Volvo built 6,611 cars during the model year at its plant in Halifax, Nova Scotia, up 0.58 percent from 6,573 in 1988.

Diamond-Star Motors, the Chrysler-Mitsubishi joint venture in Normal, Ill., reported no production for the 1989 model year. It has been building 1990 models since it started production late in 1988.

Chevrolet Corsica/Beretta was the car production volume leader in the 1989 model year with 411,409 units, followed by Ford Taurus, 395,261; Chevrolet Cavalier, 376,626; Ford Escort, 363,122; and Pontiac Grand Am, 246,418.

ing to Healy.

There was no ceiling on rebates, analysts said, noting that in the model year, the Big 3 spent $8 billion on incentives. It is estimated that GM spent about half of the total.

"Maybe they did spend too much in the third quarter," said Michael Luckey, Michael Luckey Consulting Group, Cresskill, N.J. "But the long-term objective is to maintain market share."

GM and Ford Motor Co. won bigger combined car and light-truck shares in the model year. GM's car and light-truck share rose from 35 percent to 35.6 percent, mainly due to truck sales gains. In the last two years, GM's truck share has risen five percentage points, according to GM President Robert Stempel.

Ford improved its car sales in 1989 and captured 24.6 percent of the car and light-truck market, compared with 24.1 percent in the 1988.

Ford's vehicle share gain was cemented again with the best-selling car and pickup truck. Escort was the top volume car for the fourth straight year with 366,354 sales, and for the eighth year, Ford's F-series full-size pickup took top honors as the leading volume vehicle with nearly 590,000 sales.

Sales charts compiled by Karen Detkowski

For the eighth year, Ford's F-series pickup was the best selling vehicle.

SALES

FROM PAGE 46

truck share fell from 14.3 percent to 13.7 percent. Nearly 48 percent of Chrysler's sales were trucks, compared with 46.08 percent in 1988.

Except for Mazda, Japanese companies with transplant operations reported car sales gains and better market shares in 1989. But Toyota, Mazda and Nissan also reported light-truck sales losses in 1989.

Toyota was the volume leader among Japanese vehicle makers in 1989. Its car and light-truck share rose to 6.4 percent, up from 6.2 percent in 1988.

Nissan and Honda continued to outpace their 1988 sales totals. Nissan had 4.4 percent of the car and light-truck market, compared with 4.3 percent last year. Honda's share rose to 4.3 percent, up from 4.2 percent.

Mazda sold fewer cars and trucks in 1989. Its share declined from 2.3 percent to 2.2 percent.

Other foreign car and light-truck makers sold 10.71 percent fewer vehicles. Their vehicle share declined to 8.8 percent from 9.6 percent in 1988.

It was a good year for U.S. light-truck manufacturers — particularly GM — and an anemic one for foreign-based light-duty truck producers.

GM's penetration jumped to 28.56 percent from 26.54 percent in 1988. It still trailed industry leader Ford, though, whose share slipped to 29.88 percent from 30.26 percent in 1988.

Chrysler's share, as represented by Dodge and Plymouth truck models, dropped to 15.26 percent from 15.74 percent in 1988.

GMC's share climbed to 7.57 percent from 7.17 percent, and Jeep's to 5.47 percent from 5.07 percent in 1988.

Foreign-based manufacturers' share dropped to 13.26 percent from 15.22 percent in 1988.

As a result of expensive rebates put in effect from mid-July, third-quarter car and light-truck sales rose 4.06 percent above the same period in 1988. There were 3,933,653 cars and trucks sold, compared with 3,780,181 in the third quarter of 1988. But third-quarter sales lagged behind the second quarter of 1989 by 2.71 percent.

Despite adversities like Hurricane Hugo hitting dealers in North and South Carolina, September car and light-truck sales rose 5.44 percent from last year.

U.S.-built and import-car sales climbed 4.09 percent ahead of September 1988.

Bouyed by a 6.13 percent increase in the final 10 days of September, the eight U.S. carmakers sold 5.75 percent more cars this year. GM, Ford, Mazda and Toyota reported higher U.S.-built car deliveries.

In September, U.S. light-duty truck sales, bolstered by special incentives, set a monthly record. Some 403,226 trucks were retailed last month, up 8.44 percent from 371,851 in like 1988.

Chevrolet's September light-truck sales rose 42.84 percent over year-ago sales, and Ford's light-duty sales declined 4.45 percent. GMC had posted a gain of 42.33 percent.

Imports continued their decline. Their sales dropped 23.23 percent from a year ago.

Truck output for quarter is 3-year low

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Third-quarter truck production of 887,175 was the lowest for that quarter since 1986 when 867,031 were built.

Last quarter's truck output was 5.06 percent less than the year-ago quarter's 934,439.

September's truck production of 309,388 was the lowest for that month since 1985 when 292,066 units were completed. Last month's output was 12.35 percent below August's 353,000 and 14.05 percent below the year-ago month's 359,981.

Last week's targeted truck production of 63,409 dipped 20.40 percent from the prior week's 79,658 and slipped 23.34 percent from the year-ago week's 82,712.

Car production in the third quarter totaled 1,393,099 units, 6.55 percent below the year-ago quarter's 1,490,730.

Last month's car output of 575,698 increased 7.14 percent over the August build of 537,308 but was 7.61 percent less than the year-ago month's 623,100.

Automakers scheduled 131,879 cars last week, 12.79 percent below the prior week's 151,228 and 13.20 percent lower than the year-ago week's 151,932.

Last week's scheduled production was split as follows: General Motors, 44.95 percent; Ford Motor Co., 25.34 percent; Chrysler Motors, 11.79 percent; Honda of America Manufacturing, 4.66 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.40 percent; Toyota Motor Manufacturing U.S.A., 3.07 percent; New United Motor Manufacturing Inc., 2.73 percent; Diamond-Star Motors, 2.37 percent; and Nissan Motor Manufacturing Corp. U.S.A., 1.69 percent.

GM's Wilmington, Del.; Linden, N.J.; Moraine, Ohio; Pontiac, Mich.; and Shreveport, La., plants remain idle due to slow sales.

Ford's Cougar/Thunderbird line in Lorain, Ohio, will be down until Oct. 16 due to sluggish sales.

Chrysler's Warren, Mich., plant will be closed until Oct. 16 because of high inventory.

Canada notches quarterly gains

Canadian automakers built 202,015 cars in the third quarter, 8.77 percent above the year-ago quarter's 185,721. September output of 83,324 cars was 23.66 percent more than August's 67,382 and 0.86 percent above the year-ago month's 82,611.

Truck output totaled 190,708 units during the three-month span, 18.65 percent more than the year-ago quarter's 160,735. Last month's truck output of 81,900 dipped 4.37 percent from the year-ago month's 85,640.

Ford Motor Co.'s Oakville, Ontario, plant was idle last week due to slow sales. The plant was expected to resume output today.

Chrysler Motors closed its Brampton, Ontario, plant last week to balance inventory. It is slated to reopen Oct. 16.

GM shifts production, 3 plants may close

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — General Motors last week began the wholesale shuffling of vehicle production among North American assembly plants, sending chills over next year's labor negotiations.

Job security will be the foremost contract issue in 1990. And with its production shifts, GM jeopardized at least two entire assembly plants and part of a third.

The shifts, which will ultimately lead to at least one plant closing, had been expected as the No. 1 automaker struggled with excess capacity born of lost market share.

In a series of announcements made Thursday at affected plants across North America, GM said:

- A Flint, Mich., truck plant will take on full-sized van production from two other plants, saving the Flint plant from closing;
- A part of the Lordstown, Ohio, complex that builds vans will close, idling 2,500 workers; and
- Plants in Scarborough, Ontario; Ste. Therese, Quebec; and Van Nuys, Calif. will have to await approval of future products before learning their fates. Scarborough and Van Nuys are potential candidates for closing.

The Scarborough plant will lose its van production to the Flint plant. GM has said a replacement product will be sought for the plant.

AUTOMOTIVE NEWS/JOE WILSSENS

UAW officials of Local 598 in Flint talk after learning that GM will move van production to their plant. "The place went wild" when word arrived, said financial secretary Charlie Phillips, center.

The Ste. Therese plant will produce the next-generation Pontiac Firebird and Chevrolet Camaro — if GM proceeds with the new-car program.

The vehicles would debut in the 1992-93 [illegible] Ste. Therese had been rumored to [illegible] closing list for as early as next Se[illegible] now builds the Chevrolet Celebri[illegible] or the Canadian market and the O[illegible] Cutlass Ciera, sold in Canada and the United States.

Selection of the potential manufacturing site for the F-car, as the Camaro/Firebird is known within GM, moves the vehicle program a step closer to corporate approval. GM sources now expect the redesigned F-car to be approved within six months. The new F-car has been on shaky-ground with GM's finance people.

GM PLANT SHUFFLE

Plant	Now	Next (when)
Flint trk.	Blazer +	Vans (91/92)
Janesville	Cavalier +	Blazer + (92)
Lordstown trk.	Vans	Closing
Scarborough	Vans	Waiting
Ste. Therese	Celebrity/Ciera	Camaro + (92/93)
Van Nuys	Camaro +	Waiting
Pontiac	Waiting	Waiting
Oklahoma City	6000/Ciera +	6000?/Ciera +

+ = More models

The current version of the Firebird and Camaro are built at the Van Nuys plant. Unless another product is assigned there, that plant could close when the new Firebird and Camaro debut.

GM has told plant employees to continue studying producing a variety of vehicles to be sold on the West Coast.

The shutdown at Lordstown and the previous closings of other plants, coupled with the prospect of more plant closings, will strain contract talks between GM and the UAW. Their contract expires next September, and early talks have begun.

UAW Vice President Stephen Yokich, who assumed control of the union's GM department last summer, said he is disturbed by the flurry of announcements.

"It suggests not only disarray but flagrant insensitivity and disregard for UAW-represented GM workers who are meeting the challenge of boosting GM's quality and pro-

GM, Ford, Renault broaden quest for small Europeans

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — The day of reckoning may be at hand in the European auto industry as three independent prestige carmakers — each with profits strained by tough U.S. competition — appear ready to merge with or be acquired by volume makers.

Several developments last week suggest the start of a long-awaited European shakeout that will affect the car and truck industries both here and in the United States. Among them:

Truck battle looms

Transplants building capacity for 525,000 units

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

NASHVILLE, Tenn. — While the domestic industry worries about its shrinking share of the U.S. car market, a gritty battle is shaping up in the important light-duty-truck market.

Truck imports have fallen sharply since 1986, and the Big 3 have developed the segment into a strong profit center. But Japan's major carmakers are positioning themselves to take a larger share of pickup, van and sport-utility-vehicle sales with increased U.S. plant capacity.

By the mid-1990s, transplants and joint ventures with the Big 3 could be supplying more than 10 percent of the U.S. light-duty-truck market. Transplant facilities will yield about 375,000 pickups and utility vehicles annually by 1992, an increase from 100,000 this year. By 1994, new plants and expansions could raise transplant truck capacity to more than 500,000 units a year.

"The light-truck market is really the only area in the industry where the Japanese have taken a beating," said analyst David Healy of Drexel Burnham Lambert. "Bringing more production to the U.S. can only improve their situation."

The stakes are high on both sides of the fence. For offshore manufacturers, light trucks represent a growing segment of a crowded industry. Although sales were flat for the first half of this year, the segment has

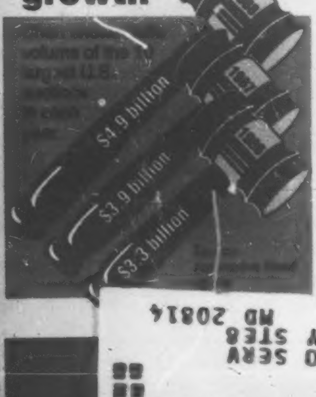
Auction growth



Auctions reach peak

Anglo, GE, Manheim own 10 biggest

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Auto auction officials are cheering 1988 as another record year for sales. It was a year that saw the three leading chains completely take over the list of the top 10 sellers.

The three chains are Manheim Auctions, GE Capital Auto Auctions and Anglo American Auto Auct

The industry's 10 leading auctions had combined sales of $4.7 billion on a unit volume of about 700,000 vehicles, up from $3.9 billion on a unit volume of 630,000 vehicles the previous year.

Cars from daily rental agencies plus fleet and lease vehicles continued to spur industry growth.

Although the industry does not compile its own statistics, 1989

2 more Ford programs over budget

Explorer and Escort/Tracer join Thunderbird in overrun column

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

In the face of a massive cost-cutting offensive, two more major Ford Motor Co. product programs are over budget.

John O'Connor, Ford Motor Co. vice president and controller, said both the Explorer sport-utility-vehicle project and the new Escort/Tracer program are coming in "slightly" above original projections. But Ford does not yet know how much over budget they are, he said.

O'Connor

They are the second and third over-budget major product programs at Ford in the last year. The other was Thunderbird/Cougar, which was introduced in December 1988. Ford's upper management sharply criticized Team Thunderbird product managers. Ford said at the time that many problems that beset the Thunderbird project were identified and would be settled in the future.

O'Connor said the cost overruns on the Thunderbird/Cougar project were much larger than those Ford is experiencing with the Explorer and Escort/Tracer.

Ford has said in the past that, like Chrysler Motors and General Motors, it is battling rising costs of vehicle production. Incentives, employee health care, more expensive materials and labor are contributing to the cost rise.

O'Connor blames the Escort/Tracer and Explorer cost overruns on the high price of meeting regulatory requirements — such as safety, emissions and fuel economy standards — as well as unfavorable exchange rates on parts and components sourced abroad and product competition.

Ford will work "right up to Job One" trying to reduce program costs, O'Connor said.

Ford has already established a full-time cost reduction group in its North American automotive operations to work with suppliers in cutting costs. The program, patterned after one at Mazda Motor Corp. in Japan, looks at all parts of the vehicle and determines if a particular part can be made less expensively or better.

Ford said it will work with suppliers to reduce costs on specific parts. Bumpers, interior trim, wiring and instrument panels will be the first four areas under review. A fifth area may be powertrains.

O'Connor acknowledged that North American automotive operations has several cost reduction efforts in effect, although many are not as "formal" as the supplier program. An automotive analyst

John Middlebrook has helped steer Pontiac down the road to success.

Pontiac chief Middlebrook has the job he hoped to get

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — With great anticipation, John Middlebrook approached the office of Lloyd Reuss, General Motors executive vice president, one day in late May.

Reuss had summoned Middlebrook, then GM vice president in charge of corporate marketing and product planning, to his office to detail personnel changes.

William Lane, Oldsmobile general manager, was moving to a newly created post to work on dealer issues, Reuss told Middlebrook. "My first thought was that maybe I was heading out to Oldsmobile," Middlebrook recalled.

Reuss continued. J. Michael Losh, Pontiac general manager, would replace Lane at Oldsmobile.

"You mean . . . " Middlebrook blurted out.

"Yes. You're going to Pontiac," Reuss told him.

"That's what I wanted to hear," said Middlebrook, who had long been rumored to be next in line for the top Pontiac post. He kids that he started those stories.

"Oldsmobile was my original home, and I'm from Lansing, but my heart is at Pontiac," he said. Patting his chest, he added: "I've got a Pontiac crest on my chest from all my years there."

In fact, Middlebrook had a hand in Pontiac's turnaround.

An engineering graduate of General Motors Institute, Middlebrook started his GM career in 1959 at Oldsmobile. He worked briefly in engineering, then moved to sales. After taking an educational leave to obtain a master's degree in marketing at Michigan State University, Middlebrook joined Pontiac where he worked in sales analysis and marketing.

In 1981, Middlebrook, as Pontiac manager of product planning and development, was charged by the general manager at the time, William Hoglund, with gathering the troops for a conference on what to do about the beleaguered division. Sales for once-strong Pontiac had plummeted to the point that there was even talk within GM of doing away with the division.

"We didn't know where we'd be then," recalled Middlebrook. "The thing that we knew back then was that we needed to pick a direction and consistently stay with it long enough to know whether it was right or not."

That was contrary to what Pontiac had done in the recent past. In the 1960s, Pontiac had gained a reputation for performance and styling. In those glory days, Pontiac owned 10 percent of the mar-

'90 Escort to stay after '91 bows in Feb.

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

To help meet fuel-economy standards and to maintain Escort's nameplate sales leadership, Ford Motor Co. will continue to build the 1990 Escort until next even though production of all-new 1991 Escorts will begin in February.

It is a touchy situation for Ford. Philip Novell, Ford Division general sales manager, said, "We are going to have to develop a strategy so the launch of the 1991 Escort will not affect sales of the 1990 Escort."

Next month's shutdown of Ford's Wayne, Mich., assembly plant for changeover to the 1991 Escort will begin a series of crucial production shifts for Ford.

Ford hopes to maintain Escort as the best-selling nameplate in the United States, a title it has held for the last four model years.

In the 1989 model year, Ford sold 366,354 Escorts to beat Honda Accord by 3,919 units.

Ford also needs the fuel-efficient Escort for its domestic corporate average fuel economy numbers. But the downtime for model changeover threatens both sales leadership and CAFE.

"In our conservative numbers, we get down to relatively low days' supply — like around 40 days — when we get out into April," said Thomas Wagner, general manager of Ford Division, at a press preview in Dearborn, Mich. "That's much lower than we typically would like to be, and there's some risk that we are losing some sales

Quebec fire cuts off supply of powder to inflate air bags

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

A fire at a Canadian chemical plant could play havoc with North American air-bag production at a time when U.S. automakers have begun to install the systems in unprecedented numbers.

Part of CIL Corp.'s explosives manufacturing compound in McMasterville, Quebec, was destroyed in an Oct. 8 fire.

The facility, which has been closed, is the Western Hemisphere's only producer of sodium azide, the volatile powder used to inflate air bags. Virtually all air-bag systems produced for North American-built vehicles use the plant's powder.

A CIL spokeswoman said the company has not determined how long production will be halted. She declined to say how severely the facility was damaged. No one was injured.

A source familiar with the situation said production would probably be curtailed at least until mid-November and possibly into December. That raises the possibility that the Big 3 could run out of air bags, one of the devices they are using to comply with federal rules requiring passive restraints in all cars built after Sept. 1.

The CIL spokeswoman said the surviving inventory is "very low" but declined to be specific.

Two key customers of the Quebec plant are the major manufacturers of air-bag modules in North America — TRW Inc. and Morton International. Each supplies approximately 50 percent of the U.S. air-bag market.

An estimated 3.3 million imported and domestic vehicles are expected to be equipped with bags in the 1990 model year, compared to 480,000 in 1989.

TRW made immediate arrangements to source sodium azide from smaller production centers in West Germany and Japan, the only other sodium azide plants in the world. A TRW spokesman said his firm has enough inventory to last through the end of October, not counting what is coming from other plants.

A Morton spokeswoman said it has a several-week supply of the powder and has not attempted to source overseas.

"Based on what we know of the situation, CIL hopes to start production again in several weeks, and Morton should have enough sodium azide that we won't have a problem," the spokeswoman said. Morton is the exclusive air-bag supplier to Chrysler Motors, while TRW supplies most of Ford Motor Co.'s and a large share of General Motors' air bags.

A TRW spokesman was more cautious in estimating the fire's effect. "We understand CIL is putting together a recovery plan, but we are far from being out of the woods yet," he said.

CIL was expanding the plant and had planned to double capacity by year-end. Production equipment for the expansion will now be diverted to bring the damaged plant back to production.

Late last week, Quebec authorities were still investigating the cause of the McMasterville fire, which started in the area where the powder is dried.

Sodium azide reacts violently in the presence of water and can become unstable with humidity or static electricity.

"Everybody's having problems in this area," the TRW spokesman said. "Air-bag demand is growing very fast, and the industry is having to learn about production very quickly."

In the past 10 months, fires and explosions have struck air-bag-module plants in Arizona and Utah, where sodium azide is mixed with other ingredients into production-ready metal-encased tablets.

TRW has been fined twice this year by the Arizona Industrial Commission for fires at two plants in Mesa, Ariz., one in June and another in July. Those accidents occurred as the sodium azide was being blended with other materials. Fires have also occurred at Morton's blending operations in Ogden, Utah.

OPINION

Chrysler-GM venture may lead to others, and that's a good idea

As startling as it sounded at first, the U.S. Justice Department should give quick approval to the proposed joint venture between two of Detroit's Big 3 automakers.

Chrysler Motors and General Motors hope to combine operations of two component plants. Just a few years ago, such a proposal would have been shocking, even outrageous. Two of the Big 3 ganging up? Don't even ask.

But the manufacturing world has changed, and government regulators ought to recognize that change. Early indications are that they do, and that they will bless the combination of GM's Hydra-matic Division manual transmission plant in Muncie, Ind., and Chrysler's New Process Gear plant in Syracuse, N.Y.

Competitors around the world have been doing similar and even bigger joint ventures for decades. GM's own joint assembly venture with Toyota was much more significant.

But the Chrysler-GM plan may pave the way for more such domestic joint ventures. For the most part, those ventures can only make American industry more competitive.

While the Big 3 are still the biggest three, they are now among 10 companies manufacturing cars in the United States. Many more companies sell vehicles in this most competitive market.

The shoddy, me-too cars of previous decades suggest that fierce competition in America was more illusory than real. But in the 1980s and 1990s, the competition absolutely forces companies to cut costs and improve quality.

The logic of the GM-Chrysler combine is compelling. Chrysler is struggling to hang on to a market share that barely qualifies it for Big 3 status. Its parts-making subsidiary is running full tilt at Syracuse in response to a booming market for four-wheel-drive systems, and the plant has more products coming on line, including products for GM.

Meanwhile, Hydra-matic's Muncie plant is underused. With the combination, everybody wins: the companies, the workers, the communities, consumers and American industry. The Muncie workers have shared the sad story of too many American workers. Since 1979, employment at the plant has dropped from 3,500 to 1,100.

Theoretically, of course, Chrysler could build an expensive new plant out in a cornfield. But the existing communities will be much better off if the companies use the existing Muncie plant.

Japanese automakers coordinate activities that can sensibly be done together. In this global economy, the GM-Chrysler plant makes productive sense.

GM
CORPORATE INDIVIDUALISM

You don't need to worry about BMW

He is handsome. He is young, just 40. He looks like a movie star. But he is nothing of the sort. He is an automotive engineer.

Wolfgang Reitzle is in charge of all development and research for BMW AG. In Munich, I had a chance to spend quite a bit of time with him after the recent Frankfurt Motor Show.

He is the most impressive automobile executive I have ever met.

We spent the better part of an afternoon talking about and wandering around his recently completed research and development facility. Simply put, the BMW center seems to make every other center obsolete. It is huge, something around 2 million square feet — about the size of Chrysler's new tech center in Auburn Hills, Mich.

The new BMW center is very impressive. more impressive is the way Reitzle has redefined the entire function of research, development, design and manufacturing of automobiles, all in one complex.

All traditional boundaries and job functions have been politely thrown out the window. The new R&D center consolidated as many as 20 scattered locations. Reitzle was given a clean sheet of paper for developing automobiles. From design through the pilot assembly lines, his group does everything from conception to launch.

The most significant aspect of this new center is the complete redefinition of who works together. The real work is not based on titles or even job descriptions, but on who should be communicating with each other. The basis for the layout is Reitzle's premise that when people are farther than 100 feet from each other, they will not interact. So he puts the right people in places where they will chat and be creative, even as they walk to the drinking fountain.

The BMW people also have the flexibility to put together work teams within hours or even minutes. They have the manpower, the physical space and the computer facilities to assemble a dozen or so problem-solving or opportunity-creating executives almost on the spur of the moment. Their pilot assembly lines are so close to the engineers and designers that changes can be made right up to launch.

After spending a few days with the new Lexus and Infiniti luxury cars, including high-speed time on the German autobahn, I wonder whether everyone realizes the impact that these Japanese cars will have on the automotive balance of power worldwide. I get nervous about a lot of companies and their resources. But after seeing Wolfgang Reitzle's center, I'm not going to worry about BMW.

The Audit Bureau

Study predicts changes in growing aftermarket of '90s

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

The successful quick-change automotive specialist will not service just one component — such as mufflers — anymore.

Even if the specialist operates a muffler shop or another outlet featuring a specific product, he will likely offer other services and repairs.

Quick-change specialists are only one facet of the rapidly evolving business of replacement parts and services in the U.S. automotive aftermarket, according to a survey by New York market research firm Frost and Sullivan.

Replacement parts and service was a $94 billion business in 1988 — $162.8 billion if motor fuel is included — according to the study, Automotive Aftermarket in the United States.

That $162.8 billion will grow to $172.2 billion by 1993, Frost and Sullivan predicted.

"Indicators for retail sales in many categories not only point up, but point up sharply," the firm said.

The study forecast that sales of accessories such as air conditioners and audio equipment will grow from $4.9 billion in 1988 to $6.1 billion in 1993.

Sales of electronic accessories, which amounted to $1.3 billion in 1988, are expected to top $2 billion in 1993.

Many factors — from the increase in theft sparking sales of security systems, to the rising consumer demand for special performance tires — influence the aftermarket.

The major factor affecting the aftermarket parts business, according to Frost and Sullivan, is the car itself — now typically four cylinders with front-wheel drive, rack and pinion steering, fuel injection, electronic ignition, multiple electronic sensors, front struts and halogen headlamps.

"The design changes, which began in the early 1980s, are already affecting the replacement market and the effects will increase in the early 1990s," the study predicted. "Fast movers will include such parts categories as constant velocity joints, MacPherson struts, electronic feedback carburetors, rack and pinion steering, electronic fuel pumps and serpentine belts.

"At the other end, negative growth can be expected for conventional carburetors, condensors and point sets, shock absorbers, spark plugs, pistons and piston rings," the study said.

In the service area, not all the traditional outlets have gone the way of the eight-cylinder engine, the firm said.

"Many oil companies are still committed to full-service gasoline stations and, much to the surprise of some observers, the ultimate service generalists, the independent garages, are surviving," Frost and Sullivan said. "Younger car owners, though, do tend to give their business to the well-advertised service specialists."

At the warehouse distributor and jobber levels, the generalists are having a harder time, the study said.

"Parts proliferation is just too great a problem and inventories have climbed 25 to 30 percent over the past four years," Frost and Sullivan said.

The 364-page study notes that specialization is not the only trend in distribution. It also looks at programmed distribution groups and the rapidly growing number of warehouse distributor-owned stores as warehouse distributors redefine their role beyond "making parts available." The study analyzes the aftermarket in all its facets, product by product.

AUTOMOTIVE NEWS / CHRISTINE BEEVER

Dyna develops test device for tires, wheels

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Dyna Industries of Chicago Heights, Ill., has introduced a portable, steerable diagnostic road-test simulator that is said to permit technicians to easily diagnose and locate the source of mechanical defects and tire vibration problems.

Developed by Gerald Gicewicz, president of Dyna Industries, the simulator is called Chassis-O-Meter. It is being promoted as an aid in diagnosing difficult-to-find constant-velocity-joint problems in front-wheel-drive vehicles.

The Chassis-O-Meter can be used to test each wheel of a vehicle, including those with two- or four-wheel drive, front-wheel or rear-wheel drive or four-wheel steering. The company said the simulator permits testing of vehicle's front and/or rear wheels individually or simultaneously.

Made of metal, the Chassis-O-Meter is 34 inches long, 31 inches wide and 17 inches high and rolls on casters. On top are two nylon rollers. The car is raised and the Chassis-O-Meter is placed under one or more wheels.

The vehicle is then lowered onto the Chassis-O-Meter with the tires placed between the top rollers.

Dyna's road-test simulator

Side rollers track the tire sidewall to prevent the testing unit from moving laterally away from the wheel. The top rollers prevent the vehicle from "climbing" off the Chassis-O-Meter.

By running the vehicle, a technician can diagnose whether the problem is tire- or mechanical-related.

Dyna Industries said the unit is self-contained and operates under power supplied by the vehicle; there is no need for electrical, pneumatic or hydraulic hookups.

Unlike large dynamometers, the Chassis-O-Meter does not require special chaining to prevent lateral runoff of the wheel. Dyna Industries said that is because the unit is the first such machine with a roller that adjusts to the contour of the tire.

As the tire rotates and changes positions, the device maintains its position relative to the tire to prevent lateral tire movement.

The price of the Chassis-O-Meter is about $6,000.

Avis finds an angel for fast-lubes

CHICAGO — Brauvin Real Estate Funds, a real estate investment firm, has entered into an agreement with Avis Service, an affiliate of Avis Rent-a-Car Systems, to provide financing for Avis Lube Fast Oil Change Center franchises.

According to Jerome J. Brault, managing general partner of Brauvin, the company will extend financing to Avis on a sale/leaseback basis, with Brauvin purchasing the franchise sites and leasing the properties to Avis franchise owners. Franchise owners are responsible for aspects of operations, property maintenance, insurance and taxes, he said.

Tom Cassidy, Brauvin vice president, said the firm's sale/leaseback financing program is designed for companies that want to avoid tying up capital in real estate.

Avis Service has 48 fast lube outlets located in 12 Northeastern and Southeastern states.

Scanner measures crash damage

By Patricia A. Kelsey
SPECIAL CORRESPONDENT

PINELLAS PARK, Fla. — MotorBody Scan, a computerized diagnostic tool that calculates collision damage back to factory specifications, is being marketed to body repair shops by Nova Enterprises, the product's first U.S. distributor.

Nova received distribution rights in 11 Southeastern states for the New Zealand-developed and manufactured product from MotorBody Scan North America, Milton, Pa., last March.

Nova President Richard T. Gallant said his distributorship will serve as a model for distributorships in other areas of the country.

Likening the MotorBody Scan to a CAT Scan given to humans, Gallant described it as an automotive measuring system that couples movement of a mechanical probe to a computer.

Unlike other scanners it eliminates setting gauge dimensions, targets or other apparatus to measure the car, he said.

Instead, Gallant said, a single probe or pointer attached to a rotating boom is placed on critical control or alignment points by the technician.

When a button is pushed to activate the system, the computer picks up and registers the damaged areas' length, width and height to serve as a reference to factory specifications.

Measurements are plotted on the computer and master drawings are made on disks from which comparisons are made to factory specifications allowing technicians to repair critical damage points according to specs. Printouts are available for company records, insurance companies and customers.

To market the unit, Nova is sending out videos and merchandising kits to new-car dealers and 80 top collision repair facilities in the Southeast. The company will also tour selected cities to demonstrate the machine.

As further incentive, the first dealer/independent in an area to purchase the unit will get a year's exclusive rights of the MotorBody Scan. The unit costs $50,000. Factory incentives will allow discount prices for the first six units sold, Gallant said.

As guidelines for scan fees, Nova suggests $50 to $70 for an underbody scan, $30 to $50 suspension, $30 to $50 full upper body and $110 to $175 for a full-body scan. The company expects to sell 10 MotorBody Scans by the end of the year and 24 to 30 units in 1990.

Service volume slips for August

By Francis J. Gawronski
AUTOMOTIVE NEWS STAFF REPORTER

Service and parts business in the shops of dealerships fell slightly in August, but results for the first eight months of 1989 remained above the year-earlier volume.

In August, shop business dipped 1.3 percent from the volume recorded in the same month in 1988 and was 6.0 percent below the business reported in July 1989, according to the Automotive News Service Index. The August decline was the first since March.

Year-to-date service and parts volume was 2.4 percent ahead of 1988's eight-month volume.

Gross profit on all labor, parts and accessories sales declined 0.2 percent in August.

Total labor sales (customer-paid and warranty) climbed 0.7 percent in August and 3.1 percent for the year-to-date period, while shop parts sales (customer-paid and warranty) were down 3.1 percent for August and up 2.3 percent for the eight-month period.

Sales of all parts and accessories declined 2.9 percent in August compared with the year-ago month, while year-to-date sales rose 1.1 percent from '88 volume.

SERVICE INDEX
98.7*

	Aug., '89 vs. Aug., '88	Jan.-Aug., '89 vs. Jan.-Aug., '88
Gross Profit on All Labor and P&A Sales	−0.2%	+3.8%
Repair Orders Written	Same	−1.8%
Total Labor Sales (Customer & Warranty)	+0.7%	+3.1%
Shop Parts Sales (Customer & Warranty)	−3.1%	+2.3%
Sales of All P&A...........	−2.8%	+0.2%

* Survey by Automotive News shows that dealers' service and parts business in August 1989 was 98.7 percent of business in August 1988. Service business in the first 8 months of 1989 was 102.4 percent of business in the corresponding period in 1988.

Customer check for Mitsubishi

CYPRESS, Calif. — Mitsubishi Motor Sales has launched a customer satisfaction program of telephone follow-up for its network of 319 U.S. dealers.

The program, which is being implemented by Sky Alland Research of Laurel, Md., and funded by Mitsubishi, involves telephone contact with all new Mitsubishi customers within 10 days of their purchase. Additional telephone follow-up on Mitsubishi service customers is also available for dealerships at the dealer's expense.

Inauguration of the new program is designed to ensure that customer satisfaction is maintained during Mitsubishi's projected expansion to 400 dealers by 1990.

Chrysler Motors has also contracted Sky Alland Research to create a national telephone follow-up program.

Chrysler, Mazda 'on-line' to woo computer hacks

Chrysler Motors and Mazda Motor of America are getting ready to join Audi of America, Ford Motor Co. and Buick in letting their customers do a bit of armchair car shopping.

Later this month, the two carmakers will open their new "on-line showrooms" as part of the Prodigy home computer service offered by Prodigy Services Co. of White Plains, N.Y.

Since 1984 Prodigy subscribers have had access to products and in-depth information, including stock market information and news. In 1988, the service expanded to include what it calls automobile on-line showrooms.

While subscribers cannot actually purchase a car via the service, they do have access to detailed color pictures of cars, dealer locations and a manufacturer's suggested retail price.

The service allows subscribers to order brochures and demonstration diskettes from the automakers to run on their home computers.

MARKETING AND MEDIA

ARLENA SAWYERS

Automakers are interested in services such as Prodigy because it offers yet another way of reaching an upscale market that doesn't have a lot of spare time to shop, said Robert Paltos, senior marketing director at Prodigy Services Co. The average Prodigy subscriber is 40, has an annual household income of $68,000 and is a homeowner.

"Our members are a bit more sophisticated — business owners, professionals and entrepreneurs," said Paltos. "They want to get information without going into the dealership."

Prodigy has 140,000 members. It expects its membership to increase to 250,000 by the end of this year and to 750,000 by the end of 1990. Prodigy costs $9.95 a month.

Ford Australia cars

In an effort to help Melbourne, Australia, in its quest to host the 1996 Summer Olympic games, Ford Australia presented eight Ford LTD cars to the Melbourne Olympic Committee.

The cars will be used by committee organizers for transporting members of the International Olympic Committee, which is scheduled to visit Melbourne during the next 18 months.

Jeep licensing

Jeep-Eagle signed three additional licenses to its Jeep Licensing program. Modern Shirt International, Modern Shirt Industries, Ltd. and KangaROOS U.S.A. Inc. will distribute Jeep-branded goods in the United States and Canada.

KangaROOS, a St. Louis-based footwear company, will produce and distribute athletic and casual

Auto spending on TV up 20% for first half

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

With General Motors leading the way, automobile manufacturers, importers and dealers spent almost $1.4 billion on television advertising in the first six months of 1989 — a 20 percent increase over the first half of last year.

Twelve of the top 15 carmakers and importers increased their expenditures, according to he Television Bureau of Advertising. Spending numbers from Broadcast Advertisers Reports data compiled in the top 75 markets are analyzed each quarter by the bureau.

Though the bureau's analysis shows large spending increases, advertising rate hikes accounted for about half — 8 to 10 percent — of those increases, said Fred Danzig, editor of the trade paper Advertising Age. He said it is difficult to pinpoint exact increases because manufacturers such as GM are able to wring discounts from the media in exchange for multimillion-dollar contracts.

GM's purchases amounted to $404.6 million, a 32 percent over last year's $306.4 million. Ford Motor Co. ranked second by spending $211.9 million, 26 percent more than last year's $168.5 million.

Chrysler Motors held onto third place, but it cut its spending by 1 percent. It spent $172.3 million, compared with $174.9 million a year ago. On the other hand, Plymouth's television purchases rose to $22.7 million, up 126 percent.

Danzig said that the somewhat distorted television spending picture at Chrysler is the result of its shifting money from other divisions to try to give Plymouth a "super television presence." The fact that Chrysler has been preparing some major print campaigns for its luxury cars also may have contributed to its decrease in television advertising spending.

Network purchases totaled $691.6 million for the first half of 1989. Chrysler Motors sponsored the miniseries, *"Lonesome Dove,"* and Ford Motor Co. was the sole automotive advertiser on the miniseries *"War and Remembrance Part II."*

Super Bowl XXIII advertisers included Volkswagen of America, Chrysler Motors, Nissan Motor Corp. in U.S.A., Hyundai Motor America and Toyota Motor Sales U.S.A.. Among the sponsors of Super Bowl pre-game and post-game shows were GM, American Suzuki Motor Corp. and Mazda Motors of America.

Toyota was the leading purchaser of television advertising among importers. It purchased $105.9 million worth of network and spot television in the first half of 1989, up 26 percent from $84.3 million last year.

Chevrolet remained the leading car advertiser at $72.3 million, up 12 percent over 1988. Pontiac was second at $71.5 million, up 10 percent. It was followed by Ford at $70.6 million, a dip of 3 percent.

Still, Ford led the way in the light-truck category with $76 million, up 86 percent.

Mitsubishi's stepped-up network spending brought it to $34.9 million, a 123 percent increase, partly because of the introduction of the Eclipse.

Individual dealer advertising for the six-month period totaled $174 million, down 9 percent from $191.2 million last year.

Richard O'Donnell, vice president of automotive marketing for the Television Bureau of Advertising, said he believes that the decrease probably was the result of the advertising charge levied on dealers by Chevrolet and GMC Truck. The charge — 1 percent of invoice — pays for dealer association local advertising, 90 percent of which, O'Donnell said, goes to television advertising.

The bureau does not break out dealer association spending; it is included in the factory total.

"The dealers have terribly strong Television exposure through the group; they spend their (advertising) money on other things," said O'Donnell.

The leading automobile dealer was Atlanta Toyota, which poured nearly $2.3 million into television advertising, a whopping 294 percent increase over the year-ago period. Its closest competitor was Foothill Nissan in Los Angeles, which spent $1.9 million — 17 percent more than during the same period last year.

Ron Pearlman, an owner of Foothill Toyota, said television advertising is no longer cost-effective. He said the cost of advertising on independent television stations in the Los Angeles area from 5 p.m. to 10 p.m. increased about 10 percent, but during the prime-time hours of 6 p.m. to 8 p.m., the increase was 25 percent.

O'Donnell's predicted that car advertising on television will remain strong for the rest of 1989.

THE TOP 20

Leading TV advertisers among U.S. auto dealers in the first half of 1989

TRUCKS

FROM PAGE 1

increased steadily since 1981. Next year is generally expected to see more expansion.

For the Big 3, light trucks have become a profit cornerstone, relatively impervious to import attack. Chrysler Motors has acknowledged that the bulk its ,rofits come from its minivans and Jeeps. And in June, for the first month ever, Chrysler sold more trucks than cars.

"Any addition of Japanese capacity in this segment can only have a negative impact on the domestics," said Wendy Beale Needham, auto analyst with Smith Barney, Harris Upham & Co. "The final result won't be as devastating as with the car market, but the Big 3 need the profits they're getting from their light-duty sales."

The Japanese automakers have focused most of their transplant activity to date on the low end of the segment — compact pickups. Six years ago, Nissan Motor Manufacturing Corp. U.S.A. began producing 100,000 to 120,000 pickups a year in Smyrna, Tenn. Isuzu began production of a light pickup at its Subaru-Isuzu Automotive joint venture in Lafayette, Ind., last month, with plans to produce 30,000 to 60,000 annually. Earlier this year, Toyota Motor Corp. confirmed plans to build 100,000 small pickups a year at its jointly owned New United Motor Manufacturing Inc. in Fremont, Calif., starting in 1991.

Analysts note that low-end pickups are the least profitable niche of the light-truck market. But in the mid-1980s, when the Japanese yen was still undervalued, light pickups could be imported into the United States and sold profitably in the $4,900-$5,500 range. They became an alternative to entry-level cars and were popular among first-time buyers.

When the dollar lost strength against the yen, pickups became less attractive to Japanese importers, especially in view of the 25 percent import duty on imported light trucks. Import prices rose in the late 1980s, and import truck sales fell 25 percent between 1986 and 1988.

Last year, while total U.S. light-truck sales rose more than 100,000 units, Toyota truck sales were down 46,000, or 14 percent. Nissan's sales dropped 22 percent; Mazda's dipped almost 20 percent; Mitsubishi's fell 8 percent, and Suzuki's slipped about 30 percent. Isuzu was the only Japanese importer whose truck sales grew last year, with an increase of about 3,415 units, or 4 percent.

For the first nine months of this year, truck sales for import nameplates were down 5.9 percent from 1988.

But the picture is changing. If price sensitivity limited pickup sales for the Japanese, cost improvements could reactivate them, Healy contends. By shifting production to the United States, Toyota and Isuzu will avoid the 25 percent tariff on two-door truck products and also protect themselves from future currency exchange fluctuations.

Nissan is weighing the possibility of producing the Pathfinder in Tennessee.

"The Japanese got out of that low-end market to a great extent because they couldn't compete on a price basis with that 25 percent tariff," Healy argues. "But when they produce the same vehicles here, they become competitive again."

At the same time, the transplants are moving into more profitable light-truck lines:

- Next spring, Isuzu will begin producing a new sport-utility vehicle called the Rodeo at the Indiana plant. The Rodeo has been designed and built specifically for the U.S. market.
- Fuji Heavy Industries, Isuzu's joint-venture partner, has alluded to the possibility of getting a sport-utility vehicle or a minivan from the Indiana facility for Subaru dealers. Plans call for an additional 120,000 units of annual production at the plant, but both partners say that future products have not been determined.
- Mazda Motors of America will begin receiving 10,000 to 20,000 two-door Ford-built utility vehicles a year in 1990. They will be based on Ford's new Explorer, which replaces the Bronco II. The company has not officially disclosed the planned allotment, but Ford's Louisville, Ky., light-truck plant is nearing completion of a $260 million expansion that will increase capacity by 40,000 units annually.
- Nissan Motor Corp. in U.S.A. will obtain 50,000 minivans a year from a new Ford plant in Avon Lake, Ohio, beginning in 1992. The $1 billion project will build about 135,000 minivans annually, to be shared by Nissan and Ford.
- Nissan's U.S. manufacturing arm is also weighing the possibility of building all its Pathfinders — both two-door and four-door models — in Smyrna.

The company will keep an eye on U.S. sales of the new four-door model this year to determine whether U.S. production is warranted.

- While Toyota is working out the details of its NUMMI truck production, the company is reportedly also weighing a second U.S. truck plant to build mid-sized pickups. Toyota is keenly aware of the need for more large vehicles. Its compact pickup sales are down about 10 percent this year, compared with a decline of only about 4 percent for its larger 4x4 truck.

Robert McCurry, Toyota Motor Sales executive vice president, said recently that Toyota remains dedicated to compact trucks but is continuing to study that larger truck market. At the same time, McCurry forecast flat sales for the small pickup segment for the rest of this year and 1990.

In another truck project, Suzuki will produce 40,000 Sidekick utility vehicles next year at its new CAMI Automotive joint venture with General Motors in Ontario. CAMI currently plans to produce 200,000 vehicles a year, of which 80,000 will be utility vehicles divided equally between Suzuki and GM. The company eventually plans to produce 400,000 units a year, including more light trucks.

Some analysts believe the transplants will find it difficult to penetrate the truck market further. One obstacle may be the Big 3's domination of the lucrative trade in large pickups, a market the Japanese have little incentive to master because there is little demand for large pickups outside the United States.

Nissan seriously considered designing and building a full-sized pickup for the U.S. market two years ago but rejected the concept as impractical, said Jules Clavadetscher, director of product planning for Nissan Motor Corp. in U.S.A.

He said he believes that Toyota is preparing to enter the full-sized pickup market in the early 1990s. Clavadetscher said Nissan decided there would not be room for one more player in the segment, let alone two.

"If we thought there was room for one, we'd be there," Clavadetscher said. "But it's hard to beat the domestics in that market."

Another issue could be dealer networks. The Japanese car companies have yet to penetrate the rural parts of the United States, which remain a bread-and-butter market for Big 3 trucks. More than a fourth of all truck sales are made in the more rural, Mid-America markets, where the imports have fewest dealerships. Toyota and Mitsubishi have targeted the regions for dealership expansion, with Toyota planning to add 15 to 20 dealers there in the next year. But the process could take years for the smaller importers, especially if sales remain sluggis'.

"The small truck market is very price-competitive and nobody makes much money in it," Healy said. "But it's become an important entry-level segment. I suspect you'll see the domestics fighting hard to hang onto it."

Nissan Motor Manufacturing Corp. U.S.A. has been building pickup trucks in the United States since it opened its Smyrna, Tenn., plant in 1983.

Canadian sales by Big 3 drop in August; imports up

By Bill Vance
SPECIAL CORRESPONDENT

TORONTO — Canadian new car and truck sales in August continued the slide begun in early summer, with domestic products again suffering the biggest decline.

Domestic-car sales dropped 12.8 percent. Chrysler Canada's sales was off 23.1 percent, and GM of Canada slipped 14.13 percent. Ford Motor Co. of Canada suffered a relatively light 5.03 percent decline.

Through August, Ford was the only make among the Big 3 in Canada to increase car-market share during the year. It held 19.75 percent of the total import and domestic car market, up from 18.1 percent a year ago.

While domestic sales fell, imports continued to show strength in August. Import sales were up more than 4,000 units, a 13.3 increase over August 1988.

The big gainer among imports was Volkswagen, up 76.9 percent. It was followed by Honda, up 43.4 percent; Chrysler, 23.5 percent; Hyundai, 21.6 percent; and Toyota, 8.85 percent.

Some imports in the upper end of the market suffered, however. Saab sales dropped 27.1 percent; BMW, 22.45 percent; Jaguar, 21.8 percent; and Mercedes-Benz, 17.6 percent. For the year, none of those companies has been able to keep up with last year's sales pace.

On a year-to-date basis, domestic car sales were down 5 9 percent, while imports climbed 1 percent.

As with domestic cars, domestic trucks also took a drubbing in August, down 15.6 percent overall. GM truck sales dropped 35.15 percent. Ford's truck sales, while down 9.73 percent, still were good enough for a rare first-place monthly sales finish over GM. For the calendar year, domestic truck sales were down 6.82 percent.

Import truck sales were up sharply for the month — 50.3 percent. Healthy gains were recorded by GM, Nissan, Mazda, Toyota and Suzuki.

For the first eight months of the year, import truck sales were up 31.2 percent. Total import and domestic truck sales were down 2.7 percent for the same period.

Fiat's pre-tax income rises 27%

NEW YORK — Fiat S.p.A. announced improved earnings for the first half of 1989.

Chairman Giovanni Agnelli said that pre-tax income rose to $1.986 billion, up 27.5 percent from the first half of 1988. Net revenue grew 19.5 percent to $19.177 billion.

Results were announced after the company's first-ever board meeting outside Turin, Italy. The meeting was held in the main boardroom of the New York Stock Exchange at the invitation of stock exchange Chairman John Phelan.

Fiat's shares have been traded on the Big Board since last February.

Fiat officials said 1989 year-end revenue should top $36.78 billion, up about 18 percent from 1988.

GM Lansing tops build of 1989 models

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

In the 1989 model year, General Motors' plant in Lansing, Mich., assembled more vehicles than any other car or truck plant in the United States and Canada.

Assembly of 417,849 cars at Lansing was a mix of the Oldsmobile Calais, Pontiac Grand Am and Buick Skylark.

The second highest output came from a transplant company. Honda of America Manufacturing built 347,432 Accords and Civics at its Marysville, Ohio, plant.

The third highest output came from a Canadian facility. Ford Motor Co. reported that it produced 273,016 cars at its St. Thomas, Ontario, plant. The plant builds the Mercury Grand Marquis and Ford Crown Victoria.

Ford also held the fourth and fifth positions. Its Atlanta plant reported assembly of 266,770 Ford Taurus and Mercury Sable models.

Fifth overall — and first among truck plants — was Ford's St. Louis plant, which produces the Aerostar minivan. St. Louis built 257,436 Aerostars.

The sixth highest total — and the highest for Chrysler Motors — was the Toledo No. 1 Jeep plant, which built 245,269 units. Toledo assembles the Cherokee and Comanche.

The lowest output came from the first transplant to set up shop in the United States or Canada. Volvo in Halifax, Nova Scotia, reported output of 6,611 740-series models.

Of the Big 3, the lowest output during the 1989 model year was at Chrysler's Kenosha (Wis.) No. 1 facility, which closed in December 1989. It assembled 29,070 Plymouth Caravelles and Gran Furys, Dodge Diplomats and Chrysler Fifth Avenues.

Eight transplant/joint-venture companies in the United States and Canada reported production for the 1989 model year. Mazda was second to Honda, drawing 228,756 cars from its Flat Rock, Mich., plant. Flat Rock builds the Mazda MX-6 and Ford Probe.

During the 1989 model year, 78 car and truck assembly plants reported production in the United States and Canada.

GM has 36 plants spread through the United States and Canada — 23 are car plants and 13 are truck plants.

Ford has 19 assembly plants. Ten build car, and nine build trucks.

Chrysler operates seven car plants and eight truck plants for a total of 15. The transplant/joint-venture plants bring the total to 78.

Joining the list of assembly plants for the 1990 model year are a second Honda plant, in East Liberty, Ohio; Diamond-Star Motors in Normal, Ill.; Subaru-Isuzu Automotive in Lafayette, Ind.; CAMI Automotive in Ingersoll, Ontario; and Hyundai Canada in Bromont, Quebec.

Diamond-Star, CAMI Automotive and Hyundai Canada started building cars during the 1989 model year, but they were listed as 1990 models and were not counted in 1989 production. Subaru-Isuzu started production of 1990 models in August. Honda's East Liberty plant will open in November.

TOP 10 AUTO AUCTIONS

NOTE: Figures were provided by companies. In some cases, figures were rounded or approximated.

AUCTION

FROM PAGE 1

sales promise to be robust despite a three-month industry-wide lag that began in June.

Auction officials say the summer downturn is past. "It caught the entire industry by surprise," said Michael J. Richardson, president and Chief executive officer of Anglo American Auto Auctions, based in Nashville, Tenn.

Florida and California are still the hottest markets for auctions due to the number of car rental agencies.

Estimates by leading auction officials peg 1989 sales as high as 6 million vehicles on registrations of 8 million cars and trucks, up from sales of 3.6 million vehicles 1988 and 6 million registrations in 1988.

The three chains' share of those sales is about 40 percent with independent auctions accounting for the rest.

Richardson said fleet-lease and manufacturer vehicles lead this year's sales activity.

He said dealer consignments at Anglo's 23 auctions are running about 9 percent behind 1989 projections.

But he said fleet-lease is 28 percent higher than expected, and manufacturer vehicles are 30 percent higher.

He predicts a strong fourth quarter and industry growth at less than 10 percent next year, again driven by fleet-lease and manufacturer vehicles.

Another source of cars for the auctions will be banks that entered the retail lease business in the last half of the decade. Those vehicles will begin coming to term next year.

Darryl Ceccoli, executive vice president of Manheim Auctions based in Atlanta, said the huge increases from rental companies and financial institutions have reached a plateau.

"There are probably 700,000 buyback cars in the system," he said. "How many more cars can the rental companies rent? We have reached a saturation point with buybacks."

Figures for Automotive News' survey of auto auctions were provided by the companies. In some instances, figures were estimated.

Manheim, with 24 auctions in the United States and Canada, owns the leading auction in the nation — Florida Auto Auction of Orlando.

Earlier in the year, the auction sold a record 4,927 vehicles in a single day, grossing $49.6 million with an estimated price per vehicle of $10,050.

In 1988, the auction had sales of $741.6 million on 84,968 units, up from $643 million on the sale of 70,000 units the previous year.

Average selling price in 1987 was $9,200. In 1988, the average selling price dipped to $8,800.

Joe Greco, manager of Florida Auto Auction of Orlando, said he couldn't explain why the average vehicle price dropped $400.

Florida Auto Auction of Orlando has a higher average selling price because 40 percent of its business is fleet-lease and buyback vehicles.

Automakers sell vehicles to daily rental companies at a guaranteed depreciation rate, or agree to repurchase them when they reach a certain mileage.

Those low-mileage, newer vehicles, often called "buyback cars," are then remarketed through auto auctions to dealers at closed sales.

The second largest volume auction in 1988 was Southern California Auto Auction in Fontana, Calif.

Owned by GE Capital Auto Auctions of Barrington, Ill., it had estimated volume of $519.3 million on 89,547 vehicles sold.

That was quite a leap for the auction, which had sales of $367.2 million on 72,000 vehicles in 1987.

Liese Spiegelberg, vice president of sales and marketing, said the auction's growth is due to a change in management and addition of customer service features like valet parking for dealers.

She also said the California market has grown dramatically in the last two years.

Anglo's Nashville Auto Auction moved from ninth to third place on volume of $493.2 million in 1988, up from $350.7 million in 1987.

Richardson attributed its growth to the number of factory sales it has every week.

Aptco Auto Auction in Detroit, another Anglo outlet, moved from eighth place to fourth with 1988 sales volume of $471.7 million, up from $353.9 million the previous year.

National Auto Dealers Exchange in Bordentown, N.J., slid to seventh place from second place in last year's survey on sales of $416.4 million, up from $408 million the previous year.

California Auto Dealers Exchange slipped to eighth place from fourth last year. Sales in 1988 were $400 million, up slightly from $395 million in 1987. Both auctions are owned by Manheim.

New to this year's list are Manheim Auto Auction in Manheim, Pa.; Metro Auto Auction of Kansas City (Anglo); Bay Cities Auto Auction (GE) in Hayward, Calif.; and Greater Chicago Auto Auction (GE).

Although independent auctions failed to make the best-seller list, they are healthy. For example, Auto Dealers Exchange of Indianapolis, had sales of $383.5 million on 66,000 vehicles in 1988, up slightly from the prior year. It ranked seventh in last year's survey.

And Southern Auto Auction of East Windsor, Conn., grossed $351 million in 1988 on the sale of 63,900 vehicles, up from $367 million on unit sales of 59,000 vehicles a year earlier. It ranked 10th in the survey last year.

GM

FROM PAGE 1

ductivity," Yokich said.

Yokich already has challenged GM on plant closings when GM recently said it would idle the Lakewood, Ga., plant next March. The discussions between GM and the union may progress to arbitration.

Under the GM-UAW contract, plant "idlings" are allowed only when dictated by declining market conditions. Yet GM has idled plants in Pontiac, Mich., Leeds, Mo., and Framingham, Mass., since the current contract was negotiated.

Dick Long, president of Local 653 at the closed Fiero plant in Pontiac, said GM now faces more trouble persuading workers to make the commitment that Fiero workers made.

The Fiero plant was touted as a model plant for labor-management relations.

Nevertheless, GM closed the plant in 1988 when sales of the two-seater fell.

"This establishes an adversarial atmosphere," Long said of upcoming labor talks.

Although no plants in Canada have been officially closed, the Canadian Auto Workers union was no happier last week than the some UAW locals in the United States.

CAW president Bob White said at a press conference Friday that the shuffling of vehicle production across the border could mean the death of the Scarborough plant as van production moves to Flint, with no specific product lined up to replace it.

Workers at other plants that had bid on the Firebird and Camaro project were disappointed.

Particularly bitter are laid off workers at GM's closed Fiero plant, which produced the plastic-bodied Pontiac Fiero until it was discontinued.

"We thought we had the best shot," said Fiero local President Dick Long. "To say we are very unhappy is to put it mildly."

GM's Oklahoma City plant also lost out on the Firebird/Camaro bid. The plant, the first of a series of new plants opened in the 1980s, had proposed building the F-car along with its present line, the Pontiac 6000, Oldsmobile Cutlass Ciera and Buick Century.

The plant is expected to continue to build the Cutlass and Century when they are redesigned in the 1993 model year. The future of the Pontiac 6000 is undecided; it may be re-designed with the Oldsmobile and Buick or could be dropped.

Nevertheless, the plant has room to build a lot more than the 300,000 vehicles it produces a year.

Only workers in Flint were elated with last week's announcements.

GM will consolidate full-size van production into the Truck & Bus Group's assembly plant in Flint.

The Flint plant now builds full-size sport utilities and full-size crew cabs.

It was to lose those products at the end of calendar 1991 but had been promised a product to replace them. The sport utilities will be moved to GM's Janesville, Wis., plant.

GM said no timetable has been set to move the full-size vans to Flint. Nor will GM guarantee saving all 4,700 jobs at the plant. GM did not say if the Flint plant will build the current version of the van or the next-generation, set to debut in the 1992 model year.

While Lordstown will lose van production, it will continue to produce the Chevrolet Cavalier and Pontiac Sunbird.

The Lordstown components and assembly complex employs 11,000.

INVENTORY

FROM PAGE 2

ported a slimmer 55-day supply.

In September, Mercedes-Benz and Audi reduced stocks and days-supply numbers, while Suzuki, Alfa Romeo and Merkur remained at more than 100 days.

Among the Big 3, only GM cut both inventory and days-supply numbers. It reduced its domestic and captive import stocks by 4.19 percent to 739,397, a 58-day supply. On Sept. 1, GM had a 66-day supply.

Ford deflated its domestic and captive car stocks by 2.71 percent to 444,600. But its days' supply increased to 64 days from 57.

Combined car stocks for Chrysler dropped to 233,473, equal to a 68-day supply. The total was 4.63 percent below last month's, which was a 67-day supply.

Honda built up its stock of unsold U.S.-built and imported cars by 17.17 percent. On Oct. 1, stocks totaled 58,305 cars and were equal to a 31-day supply, up from 21 days on Sept. 1.

Combined car car stocks for Toyota dropped 8.47 percent in September to 82,835. Toyota started October with a 37-day supply, up from last month's 28 days.

Nissan cut its inventory 1.10 percent to 141,497 on Oct 1.

In September, Mazda reduced its unsold car supply by 1.44 percent to 39,905 units equal to a 48-day supply. Mazda began September with a 48-day supply of cars.

Chrysler reshuffles spiffs on old models; adds '90s

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

Chrysler Motors last week announced new incentives on 1990 cars and adjusted incentives on 1988 and 1989 models.

Chrysler also altered its special finance rates twice within a week, making the rates on its three-year and five-year finance program the lowest among domestic carmakers.

Meanwhile, General Motors added a rebate for import owners who buy 1990 Geo Prizms.

The 1988 and 1989 cars covered by Chrysler's new program and the amount of incentives are:

Dodge Aries, Plymouth Reliant, $750; Dodge Lancer, Chrysler LeBaron GTS, $1,000; Dodge Spirit, Plymouth Acclaim Highline, $500; Spirit ES, Spirit LE, Acclaim LE, Acclaim LX, $750; Dodge Shadow, Shadow ES, Plymouth Sundance, Sundance RS, $500; Dodge Omni, Plymouth Horizon without air conditioning, $500; Omni, Horizon with air conditioning, $750;

Also, Dodge Daytona, $500; Daytona ES, $750; Daytona ES Turbo, Shelby, $1,000; Chrysler LeBaron coupe Highline, $1,000; LeBaron coupe Premium, GT, GTC, $1,000; LeBaron convertible Highline, $750; LeBaron convertible Premium, GT, GTC, $750.

Also, Dodge Dynasty, $500; Chrysler New Yorker, $500; Chrysler New Yorker Landau, $500; New Yorker Landau with Mark Cross package, $1,000; Eagle Premier LX, $1,000; Premier ES, $1,200; Premier Limited, $2,000; Eagle Summit DL, Summit LX, $750; Summit DOHC, $1,000; and Eagle Medallion, $1,000.

Rebates covering Chrysler's 1990 cars are as follows: Spirit, Acclaim Highline, $500; Spirit ES, Spirit LE, Acclaim LE, Acclaim LX, $750; Shadow, Sundance, $300; Shadow ES, Sundance RS, $500; Omni, Horizon without air conditioning, $500; Omni, Horizon with air conditioning, $750; Dodge Daytona, $750; Daytona ES, $1,000; Dodge ES Turbo, Shelby, $1,000; Chrysler LeBaron coupe Highline, $750; LeBaron coupe Premium, GT, GTC, $1,000; LeBaron convertible Highline, $750; LeBaron convertible Premium, GT, GTC, $1,000; Dodge Dynasty, $500; New Yorker Landau with Mark Cross Edition package, $500; Chrysler New Yorker Fifth Avenue, $1,000; Fifth Avenue with luxury equipment or Mark Cross package, $1,000; Eagle Premier LX, $700; Premier ES, $700; and Premier Limited, $1,000.

On Oct. 7, Chrysler announced special finance rates through Chrysler Credit Corp. of 6.9 percent for one to 24 months; 8.9 percent for 25 to 36 months; 9.9 percent for 37 to 48 months; and 10.9 percent for 49 to 60 months. Three days later, it reduced its rates to 7.9 percent on 25- to 36-month contracts and to 9.9 percent on 49- to 60-month contracts. Chrysler's program runs indefinitely.

Chevrolet is offering import vehicle owners a $1,400 rebate toward the purchase or lease of a 1990 Geo Prizm. Domestic vehicle owners receive an $800 rebate.

GALE

FROM PAGE 4

"We're going to have to figure out manufacturing methods and processes that give us the flexibility to do things differently," Gale said.

Chrysler is using its Diamond-Star Motors plant in Normal, Ill., as a test bed to study manufacturing methods needed to make future versions of the sport coupe built there distinct from one another. The plant, a joint venture of Chrysler and Mitsubishi Motors, builds the Plymouth Laser, Eagle Talon and Mitsubishi Eclipse.

Simplifying the vehicle lineup with strong, trend-setting products is the key to cutting through market clutter and retaining loyal buyers, Gale said.

He also indicated that Chrysler is working on concept vehicles that will debut at 1990 auto shows.

The company is developing a futuristic vehicle — possibly minivan-based — that may use alternative energy sources. It is designed to combat air pollution.

Also under development is a post-LH car designed to balance the company's federal fuel economy ratings.

The concept vehicle is being developed in anticipation of an increase in the corporate average fuel economy standard to near or above 30 mpg. It would be positioned between small fuel-efficient vehicles and larger less-fuel-efficient cars in a zone described by Gale as "CAFE neutral."

Currently, Chrysler is accelerating development of a new PL small-car platform because of mounting government pressure for fuel-efficient fleets. For the 1990s, the company is also planning the larger LH sedans and a forthcoming LX luxury series to produce greater profit per vehicle.

Gale said company staffers put on "their propeller hats" and began looking far into the future to conceive a futuristic concept vehicle — possibly minivan-based — that is expected to debut at the North American International Auto Show in Detroit in January.

"One of the exercises we've done is to ask the guys in California to get all the Los Angeles and San Diego papers and all the material that is very current to see what is going on," Gale said. "Put them on the wall. Let's just stand back and look at the environmental concerns, the emissions problems, the smog, the congestion, the gridlock on the freeway. These things are incredibly frustrating to anybody who lives there."

Gales said Chrysler as a manufacturer must respond to the future of transportation rather than just develop replacement vehicles for existing market segments.

"How can we as a manufacturer respond to the future of transportation as opposed to just looking at replacement vehicles in segments we know today? How do we make that leap?" Gale said.

"I think we have to take a look at what is on the other side of the hill for us," Gale said. He said it is necessary to do something so different that a proposed vehicle — in large volume — might radically improve the environment.

The show vehicle to debut in Detroit will use combustible fuels, but Gale said the company is investigating alternatives.

Shutdowns keep output below par

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. production remained well below normal last week as high inventories closed three car plants and three truck plants.

Automakers scheduled assembly of 139,359 cars last week, 5.43 percent more than the previous week, but 11.00 percent below the year-ago week. The previous week's output was also affected by plant downtime. Normal weekly output is about 155,000 in mid-October.

Last week's estimated production was split as follows: General Motors, 43.72 percent; Ford Motor Co., 24.91 percent; Chrysler Motors, 13.81 percent; Honda of America Manufacturing, 4.97 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.22 percent; Toyota Motor Manufacturing U.S.A., 2.87 percent; New United Motor Manufacturing Inc., 2.66 percent; Diamond-Star Motors, 2.33 percent; and Nissan Motor Manufacturing, 1.51 percent.

Scheduled truck production last week was 63,506, down 0.99 percent from the prior week and down 20.95 percent from last year. The mid-October norm is about 80,000 weekly.

Ford said it will halt output at its Wayne, Mich., plant, which builds the Escort, on Nov. 22 to retool for an all-new Escort that is scheduled for spring introduction. The plant is slated to reopen Feb. 26; during its downtime, the Edison, N.J., plant will continue output of the 1990 Escort.

The Thunderbird-Cougar line at Ford's Lorain, Ohio, plant resumed production today after a two-week shutdown to balance inventory.

GM idled its Oklahoma City plant today for one week due to bloated inventories.

GM's Linden, N.J., car and Flint, Mich., truck plants remain idle until Oct. 23. Its Pontiac West truck plant in Pontiac, Mich., and its Wilmington, Del., car facility resumed operations today.

Chrysler's Warren, Mich., truck plant returned to work today after a two-week shutdown. GM's Bowling Green, Ky.; Fairfax, Kan.; and Detroit plants returned last week.

Holiday's effect mixed in Canada

Despite downtime for the Thanksgiving holiday last week, targeted Canadian auto production topped the prior and year-ago weeks.

Last week, automakers scheduled 18,244 cars, 10.30 percent more than the prior week, and 8.17 percent above the year-ago week.

The prior week's output was affected by downtime caused by slow sales and the year-ago week's build was cut by the holiday.

Truck output showed the effect of the short week. Last week's assembly was slated at 15,923, 13.59 percent below the previous week, and 9.61 percent below the year-ago week.

Chrysler Motors' Bramalea, Ontario, Jeep plant was expected to resume production today after downtime due to slow sales.

Tokyo show showcases Japan design

This week's Tokyo auto show will be the center of the automotive universe as Japanese designers seek to dispel the notion that they merely copy Western designs.

Visitors from North America and Europe will gather at the biennial show to view the Japanese concept cars and production models they will face in the marketplace in the coming years.

Among new production or near-production models are the mid-engined Toyota MR2, Mazda Cosmo coupe, Mitsubishi Diamante sedan, Mitsubishi HSX coupe, Toyota Previa minivan and Nissan NX.

Exclusive photographs of cars at the Tokyo show, Pages 42 and 43.

Toyota's redesigned two-passenger MR2, top, and the rotary-powered Mazda Cosmo go on sale in the United States early next year.

Ford kills Merkur, cancels '90 Scorpio

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

Ford Motor Co. canceled its Merkur line last week, failing for the third time to sell a European car line in its Lincoln-Mercury showrooms. Ford announced it would eliminate Merkur's only remaining product, the German-built Scorpio.

Ross Roberts, vice president and general manager of Lincoln-Mercury Division, said falling sales did not justify the expenditure needed to bring Scorpio up to new passive restraint requirements.

"Given less than anticipated sales volumes and investment requirements to re-engineer the cars to meet federal standards, the decision was made to discontinue importation," said Roberts.

L-M dealers with a Merkur franchise are being encouraged to display Merkur dealer signs even though they will have no cars to sell. The signage program will be evaluated next year. L-M dealers who had franchises will continue to provide parts and service for Merkur vehicles and will honor the guaranteed resale program on the Scorpio.

If dealers want out, L-M will buy back any 1989 Scorpios a dealer does not want and will reimburse the dealer upon request for signage and parts at full cost.

The Merkur franchise was established in 1985 to appeal to a growing number of young, affluent luxury sporty car buyers who were shopping for cars in BMW, Audi, Saab and Volvo showrooms. The cars were sourced from Ford's European subsidiary, Ford of Europe, which had successfully sold the models in Western Europe.

But the product line failed to ignite sales interest.

Merkur was Ford's third attempt to bring Europe into L-M showrooms. Earlier, it offered Ford of Germany's sporty Capri coupe and the limited-edition Pantera sports car from Italy. They were short-lived.

Merkur died slowly. L-M in 1986 called back 50 of the original 700 Merkur dealerships. In 1987, the name Merkur was virtually eliminated from Scorpio and XR4Ti advertising to stress the products over the brand name. In 1988, Ford announced that it would commit no more television dollars to its XR4Ti model. Several months later it said it could not justify the investment to equip the car with required passive restraints and dropped it from the lineup.

L-M planned to introduce the 1990 Scorpio in January and executives talked freely about a Scorpio notchback arriving in the 1991 model year. The only public sign that the franchise was in trouble was an announcement in September that marketing dollars for Scorpio would be reduced and the number of Merkur dealers would be cut a second time.

Dealers and marketing experts point to a series of marketing oversights that led to Merkur's termination. Detractors say the cars were good products but were overpriced by $8,000 to $10,000.

"The Scorpio should have been a $15,000 car and it would have sold well," said David Byram, general manager of Elmhurst Lincoln-Mercury, Elmhurst, Ill.

Others say there was too much competition from other domestic

QUAKE: *Dealerships, NUMMI, Ford parts site damaged*

By Dutch Mandel and Timothy J. Dunne
AUTOMOTIVE NEWS STAFF

Last Tuesday's California earthquake brought havoc to the San Francisco Bay area, but the auto industry there fared reasonably well.

The quake was indiscriminant in its destruction, buckling and collapsing highways, bridges and buildings.

Feeling the temblor's effects were an auto manufacturing plant and high-tech Silicon Valley businesses, a Ford Motor Co. parts depot and countless auto dealerships and down Northern California's San Andreas Fault.

"I was on the third floor of this building, and I could hear glass breaking all around me," said Michael Damer, a spokesman for New United Motor Manufacturing Inc., the General Motors-Toyota joint venture in Fremont, Calif. "There was no panic when the earthquake was going on — there was just amazement from everyone."

Damer said that when the quake struck at 5:04 p.m., the second shift at NUMMI had been under way for 35 minutes. He said the facility was evacuated immediately, and operations ceased.

Damage included broken glass, water main and air compressor breakage and electricity loss. Damer said that of 10 people injured — with cuts and bruises, possible fractures and an asthma attack — three were released from the plant medical facility and seven were moved to a hospital.

Review: 'Roger and Me' is funny, sad and often absurd

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

DENVER — At nearly every public gathering lately, General Motors Chairman Roger B. Smith has had to defend himself, the corporation and the city of Flint, Mich., against their portrayals in the recently released film, *Roger and Me*.

The documentary by Flint native Michael Moore has taken the movie world by storm. The film chronicles the downward spiral of Moore's home town in the wake of GM plant closings that put more than 30,000 employees out of work, as well as Moore's efforts to track down Smith to convince him to visit Flint.

The film is funny — often absurd — and at the same time, sad.

The film is not yet available in commercial theaters, but movie houses hosting film festivals have packed in the audiences. At last week's Denver International Film Festival, all showings of *Roger and Me* sold out.

The film has won the prestigious Toronto Film Festival award and could be headed for an Oscar.

Movie critics have showered the picture with accolades. The New York Times called Moore a humorist in the tradition of Mark Twain.

Admitting he hadn't seen the film, Smith told reporters after the film won the Toronto award in September that from what he had read, the film does a great disservice to Flint and the thousands of workers there who contribute to the city and GM.

"It is unfortunate," he said, "that people who have pride in their community and the products they build are subjected to public embarrassment at a time when they are producing some of the finest products in America."

Other GM executives and members of the automaker's public relations staff also have spent much of their time standing up for Flint and GM since the film's release.

In an unusual move, GM recently

Ford keeps eye overseas:
Ford's talks with Saab-Scania are dead. But the automaker's No. 2 man, Harold Poling, says the company continues to look for joint-venture possibilities. Page 3

Poling says Jaguar won't end Ford hunt for partners

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Ford Motor Co. will continue to explore possible joint ventures and projects with other overseas and domestic manufacturers — beyond current links with Mazda and Nissan and a pending relationship with Jaguar.

Ford Vice Chairman Harold Poling said Ford — which has increased its stake in Jaguar to more than 10 percent — is hoping to expand Jaguar's present car lineup with the assistance of Ford's engineering and manufacturing expertise and the benefits of Ford of Europe's "volume sourcing."

Ford, according to Poling, wants to help the British firm be a stronger competitor in Europe and the United States in the ultra luxury market.

But cross-breeding Ford and Jaguar product lines is unlikely.

Ford, Saab-Scania end talks

DETROIT — Ford Motor Co. and Saab-Scania have dissolved their talks about closer collaboration.

A brief joint statement Friday said, "These discussions did not lead to a conclusion acceptable to both sides and therefore have been discontinued."

They said they were unable to reach an agreement that could make long-term business sense for both parties.

The companies confirmed the discussions early in September but would not identify the nature of those talks.

The talks were part of a broadly based realignment in the European vehicle industry. Ford and General Motors are bidding for Jaguar, and Renault and Volvo are discussing areas of "mutual interest."

"I think we have a unique position with our luxury car products in the United States. I see this as different," said Poling when asked if Jaguar products could appear in Lincoln showrooms.

Ford would likely provide assistance where needed, not key components. "They have their own unique engines and to the extent they have powertrains planned that would satisfy the demand of the products they have planned," Poling said.

Poling said General Motors' bid for Jaguar didn't surprise Ford, because Jaguar had discussions — solicited and unsolicited — with nearly every major automaker.

AUTOMOTIVE NEWS/JOE WILSSENS

Ford's Harold Poling wasn't surprised by GM's bid for Jaguar.

Jaguar's purchase price, he said, must make it a "viable venture" for Ford. He added that Ford will not pay an unreasonable price.

"We would expect a relationship such that it would develop into a strong, healthy, vibrant competitor in the area of the market they (Jag-

MG, Triumph may be part of Sterling's U.S. future

By Richard Feast
AUTOMOTIVE NEWS STAFF REPORTER

AUTOMOTIVE NEWS/JOE WILSSENS

Morris aims to turn Sterling around by 1992.

DETROIT — The prospect of an MG or Triumph returning to the United States has been dangled before beleaguered dealers by Sterling Motor Cars President Graham Morris.

Morris, listing the brand names still owned by the parent Rover Group, said, "We could bring back one of those badges, put it on a suitable vehicle and sell low volumes of 2,000-3,000."

While Morris would not identify the brand, the news represented a break with Rover policy of never discussing future products.

Sterling recently confirmed it will introduce a coupe derived from the sedan in the United States during the 1992 model year.

Sources also say the sedan replacement has been brought forward and that a convertible will follow the introduction of the coupe. Those cars are in addition to the niche model alluded to by Morris.

Rover is the name of the group that once successfully retailed MG, Triumph and Austin-Healey sports cars in the United States. The company, which presently sells MG versions of some of its sedans in Europe, also owns the Austin, Morris, Riley and Wolseley names.

The new products are part of a five-year plan to establish Sterling as a niche marketer in the United States.

Sterling directors discussed four strategies when they met three months ago: to pull out of the United States; to stick with incentives and remain as it is; to pursue a multimillion-dollar expansion plan; and — the course chosen — to go for what Morris called a "stabilizing strategy".

The plan calls for steadily reducing losses and a profit by 1992 for Sterling, Morris said.

One of the factors behind the decision to stay is the unification of European markets after 1992. Rover anticipates greatly increased competition in Europe and a pressure on margins as price equalization takes effect. The United Kingdom, where Rover sells most of its cars, has traditionally been a high-profit market.

"One of the main Rover Group objectives is an export-led expansion," said Morris. "We have to look elsewhere, and the United States is the obvious place."

One of Sterling's first steps is to ask dealers, "Have you got a future with Sterling?"

The question, in the form of a video dispatched to each of its 161 dealers, follows a quiet nine-month period during which Sterling has been getting its house in order.

"We want commitment," said Morris, who in January became the company's third president in as many years. "We're saying to them, 'Let's stay married, or let's get divorced.' "

Morris acknowledged past quality problems with Sterling, which went on sale in 1986. "We let the consumer down with some basic problems in 1987," he said.

But he said quality has improved dramatically. "The perception of quality lags behind reality, but we need a third-party endorsement."

Sterling expects results this week of a J.D. Power survey it commissioned on the subject. "Early reports are that we see a drastic improvement in every area," Morris said.

Big efforts are going into getting cars to market on time. The 1989s didn't go on sale until the spring of this year. The 1990s will not be on sale until November, but Morris promises 1991 cars will be ready for market next September.

Sterling has been steadily reducing stocks, which have been high almost from the introduction. It cleared unsold 1989s by providing free floorplanning to dealers. At present, there are no plans for incentives on 1990 models, Morris said.

He would not talk about sales projections, though he conceded there may be a further fall this model year. It would be on account of tougher market conditions, more competitors and the fact that Sterling is a year older.

Jaguar leader tells why Ford is unwelcome

By Daniel Ward
STAFF CORRESPONDENT

LONDON — As the rivalry between Ford and General Motors to be a successful suitor to Jaguar intensifies, Sir John Egan has spoken out about why Jaguar wants to rebuff Ford's "unwelcome" advances. Ford now owns 10.4 percent of the British firm.

The Jaguar chairman, speaking at the London Motorfair last week, said that in discussions with Jaguar, Ford has spent 90 percent of its time talking about eventual ownership of the luxury carmaker.

In contrast, GM has devoted 90 percent of its discussions over a nine-month period to establishing potential areas for partnerships and collaboration.

Egan

The quickening pace of tough emissions legislation in the United States is one of the major reasons the company's management concluded it needed a long-term partner.

"We have the technology to achieve these emissions standards, but we need a partner," Egan said.

Jaguar also realized that it must now have high-volume suppliers of "incidental parts" like wiring and switches.

GM is becoming a significant supplier to Jaguar. For more than a decade, Jaguar has used the GM400 automatic transmission for V-12 models.

GM's Delco operation will develop the engine management system for the revised V-12.

After Jaguar talked to "most of the carmakers in the world, GM emerged as the easiest to do business with as they were quite willing to help us," Egan said.

Ford would fund the expansion of Jaguar's model range with the addition of a car to compete with the BMW 5 series.

"We always wanted to expand our range, and it so happened that GM had an idea that was close to one we wanted to develop," Egan said.

Last week The Associated Press reported that Jaguar would build cars for GM.

Subaru-Isuzu expands ahead of schedule

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

LAFAYETTE, Ind. — Subaru and Isuzu will accelerate their U.S. production plans with a $90 million expansion of their Indiana plant, two years ahead of schedule.

Subaru-Isuzu Automotive officials said last week that by the third quarter of 1991, capacity at the $550 million plant will be boosted from its current 120,000 cars and trucks a year to about 170,000.

Tamon Yamamoto, Subaru-Isuzu president, said the plant will reach annual capacity of 240,000 vehicles by the fall of 1993.

That would be two years ahead of the schedule the parent companies originally planned but never announced, he said.

Subaru holds prices, Page 44

The early expansion reflects the company's optimism about U.S. sales prospects. Although Subaru's sales have declined this year, it is counting on increased demand for the Legacy, now being built by Subaru-Isuzu. Isuzu will rely on the expansion to help meet growing demand for sport-utilities.

Subaru-Isuzu began production in September. Fuji Heavy Industries (which owns Subaru) owns 51 percent of the venture; Isuzu Motors, the rest.

Half of the plant's output is Subaru Legacy sedans and wagons; the other half is Isuzu pickups. Next spring, Isuzu will also begin producing the Rodeo, a new sport-utility based on the Trooper.

Subaru has not specified what its next vehicle will be. But in an earlier interview, Yamamoto said the company was considering building its XT sports car at the Indiana plant.

The initial $90 million expansion, which is already under way, will boost production from 10,000 vehicles a month to 14,000 by mid-1991. That volume will also be divided evenly between the companies.

Akira Soejima, senior managing director of Fuji Heavy Industries, said Fuji is confident that, despite falling U.S. sales, expanded Subaru-Isuzu output in the United States is necessary. Subaru of America projects U.S. sales of 150,000 units for the 1989 calendar year, down from approximately 170,000 two years ago. Soejima said the company is currently selling 5,000 Japan-built Legacys a month in the United States and expects that number to increase.

The company dubbed its $90 million expansion an "accelerated Phase II" because it is a production stage that was not planned originally. Subaru-Isuzu had expected to go directly from 120,000 units in Phase I to 240,000 in Phase II.

James M. Woroniecki, Subaru-Isuzu vice president of human affairs and general resources, said the current expansion will include about $15 million in additional building construction and three additional stamping press lines.

NADA's Tonkin may raise automakers' ire with new ad

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

HILTON HEAD, S.C. — Ron Tonkin has raised a slew of controversial issues about auto dealers and their relationships with automakers since his term as president of the National Automobile Dealers Association began last February.

And now, he plans to reiterate many of those issues in a print ad to appear soon in industry trade magazines.

Tonkin declined to discuss specifics of the ad, but apparently it also includes advice — called "thought-starters" — to dealers on how to confront automakers.

Tonkin has railed against manufacturers on issues like elimination of carryover allowances, fleet subsidies, changes in dealer advertising costs and layers of incentives to sell cars.

One NADA director characterized the ad as "a punch in the face" to manufacturers, saying he couldn't discuss it further for fear of losing the element of surprise.

Tonkin unveiled the plan last week at NADA's board of directors meeting here. At the time, he asked directors for a vow of secrecy on the ad's contents.

Although there were concerns about whether the ad could create liability questions for the association, an NADA spokesman said late last week it will go forward.

At last week's meeting, NADA directors also elected Ray Green, president of Ray Green Holding Co., based in Jacksonville, Ill., as the next president of the 20,000-member association.

Green, currently NADA first vice president, will assume office Feb. 13 at the association's 1990 convention in Las Vegas, Nev.

He has been active in a variety of NADA programs including industry relations, NADA building committee, Project 2000 and NADA/American International Automobile Dealers Association.

He is also chairman of the Toyota line group and serves on the Dealers Election Action Committee among others.

Adcox

Green has stated that he wants an increase in dealer contributions to the Dealers Election Action Committee so it can maintain and improve its political clout.

Frank Anderson, president of Sir Walter Chevrolet Co. in Raleigh, N.C., was elected first vice president. Anderson will almost certainly succeed Green as president in 1991.

Anderson is chairman of NADA's finance committee, serves on the building committee and is executive committee liaison to the policy and bylaws committee.

Mark S. Herrmann, president of Mark Buick Corp. in Yonkers, N.Y., was elected NADA secretary for 1990, and Herbert Adcox, president of Herb Adcox Chevrolet in Chattanooga, Tenn., was elected treasurer.

Elected for two-year terms as NADA regional vice presidents were Edward L. Scuncio, president of Scuncio Chevrolet in Greenville, R.I., Region I; and Richard E. Strauss, president-general manager of Dick Strauss Ford-Isuzu-Suzuki, in Richmond, Va., Region II.

Dealers elected to the finance committee are James K. Lust, president of Lust Chevrolet-Buick Co. in Aberdeen, S.D., for a three-year term; and S.J. Schumacher, owner-manager of Schumacher's Inc. in Linton, N.D., for a two-year term. Robert E. Moody, president of Moody's Inc. of River Falls, Wis., was re-elected a three-year term.

Elected to the board of directors of the National Automobile Dealers Association Retirement Trust for three-year terms were Jim Clark, president of Jim Clark Motors Inc. in Lawrence, Kan.; and Jimmy C. Payton, president of Payton-Wright Ford in Grapevine, Texas. Howard J. Christensen, president of Motor Inn. Co. of Albert Lea, Minn., was re-elected for a three-year term.

Bob Maquire, president of Bob Maquire Chevrolet in Bordenton, N.J., was elected to the board of directors of the National Automobile Dealers Associaiton Insurance Trust. Moody was re-elected to the board.

Makers slash 68,000 cars from 4th-quarter schedules

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers have trimmed nearly 68,000 cars from their fourth-quarter production schedules.

The nine automakers now expect to assemble 1,656,046 units in the last three months of this year, 12.76 percent below 1988's total.

The updated fourth-quarter schedule indicates the lowest output for that period since 1982 when the recession slashed auto production to 1,308,774.

The Big 3 have scheduled 1,362,000 cars for assembly in the October-December period, 19.32 percent below last year's fourth-quarter output.

Transplants and joint-venture companies expect to produce 294,046 cars, 39.98 percent more than the 210,059 built in the final three months last year.

Ford Motor Co. was the only company to boost its schedule from its original forecast. Ford plans to assemble 400,000 cars, 6,000 more cars than it had initially slated, but still below last years output.

Ford's projected build is 10.55 percent below the 447,161 cars built in the period last year. Ford attributed this year's production dip to the Nov. 22-Feb. 26 shutdown of the Wayne, Mich., plant to retool for the new Escort.

General Motors cut 47,000 cars from its original fourth-quarter forecast. GM now plans to build 733,000 cars, 22.42 percent below its fourth-quarter build last year.

Chrysler Motors revised its schedule to 229,000 cars, 8,000 less than its original forecast and 22.67 percent below the year-ago total.

Diamond-Star Motors cut almost 15,000 cars out of its original schedule. The Chrysler-Mitsubishi joint venture now plans to produce 41,245 units. The company began reporting production figures last January.

Mazda Motor Manufacturing (U.S.A.) Corp. trimmed its schedule by 3,000 cars. Mazda now plans output of 52,000 units, 15.41 percent below the year-ago fourth quarter total.

Honda of America Manufacturing cut a mere 730 cars from its original schedule, bringing its new estimate to 84,455. That is 4.37 percent below 1988's fourth-quarter total.

Nissan Motor Manufacturing Co. U.S.A., New United Motor Manufacturing Inc., and Toyota Motor Manfacturing U.S.A. reported no changes in their fourth-quarter schedules.

Subaru-Isuzu Automotive in Lafayette, Ind., said last week that it was unable to supply a fourth-quarter auto production forecast.

FOURTH QUARTER AUTO PRODUCTION SCHEDULE, U.S.

	Projected 1989	Actual 1988	% change
GM	733,000	944,880	−22.42
Ford	400,000	447,161	−10.55
Chrysler	229,000	296,120	−22.67
Total Big 3...	1,362,000	1,688,161	−19.32
Diamond-Star	41,245	0	—
Honda ..	84,455	88,310	− 4.37
Mazda ..	52,000	61,473	−15.41
Nissan ...	26,046	25,510	+ 2.10
NUMMI .	43,300	16,239	—
Toyota ...	47,000	18,527	—
Total transplants/joint ventures	294,046	210,059	+39.98
Total	1,656,046	1,898,220	−12.76

Auto sales didn't tumble along with stock market

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Recent fluctuations in the stock market apparently have not yet caused a further sales downturn in the United States.

In a random Automotive News survey last week, dealers said sales were sluggish, but they could not attribute declines to stock market fluctuations since the Oct. 13 plunge of 190.58 points in the Dow Jones Industrial Average.

Several dealers said sales are down because customers are confused by the myriad of complex and diverse rebates on 1989 and 1990 models. A few said adverse weather reduced showroom traffic.

Conversely, some import dealers were surprised by an upturn in sales after the stock market upset.

After the Dow Jones average plunged 508 points on Oct. 19, 1987, dealers — particularly those in the Northeast and those selling upscale imports — reported an immediate, prolonged downturn due to consumer caution.

Dealers surveyed last week were monitoring inventories, and some said they have begun to cancel or freeze car orders. East Coast and Great Lakes dealers were most apprehensive about slower sales.

"Our traffic has been off the last few days. The buyer is totally confused. What we need now is something very simple and aggressive like 4.8 percent for 48 months," said Edward J. Butera, general manager of Warnock Chevrolet and Geo in Morristown, N.J.

"Used-car business has been good but new-car business has been horrible. We've canceled orders," said Steve Bird, sales manager of Courtesy Chevrolet-Oldsmobile in Shelby, Ohio. He said his stock is about 70 percent 1989 models.

Traffic has been down for Peter Griffin's Ford and Buick stores in Greenwich, Conn. But Griffin said he can't attribute it to stock market wariness. "The only traffic that has remained strong is Lexus," he said. "We're taking orders at list price. Buick has fallen off dramatically. Weatherwise, we've had rain for the last three days."

The stock market swings won't have the same impact as two years ago, according to Gregory Swartz, general manager of Randolph (Mass.) Chrysler-Plymouth. Sales were off last week, but he said it was more likely due to the vestiges of tropical storm Jerry.

A Boston luxury import car dealer said his grosses were way up last week and a lot of customers were paying cash for BMW and Mercedes-Benz models. He speculated that some might be taking equity loans. His dealership sold 10 cars the day the market dropped.

Sales have been sliding since early October for Sun Belt dealership Camelback BMW-Porsche in Phoenix, Ariz.

"Customers are more confused than cautious," said Camelback new-car manager Chuck D'Amato.

"I was concerned in the beginning," said Rene Areullo, new-car sales manager at Miami Lincoln-Mercury. "We had a decent Saturday and a slow Sunday (following the Friday Oct. 13 market plunge). Sales were nearly back to normal this week."

Stempel's view: 'minimal effect'

ST. LOUIS — General Motors President Robert Stempel told a group of engineers last week that the wild gyrations on Wall Street will have "minimal effect" on 1990 car and truck sales.

"The stock market gave us all a jolt in the closing hours of Friday afternoon (Oct. 13). But Monday's return to reasonable behavior indicates the basic business is sound," he told members of the North American Die Casting Association.

Basing his opinion on the University of Michigan consumer confidence survey, he said buying attitudes are still strong. "We are watching deliveries and stocks carefully," he said. "Car sales are still vulnerable. They've been strong for a long time — due in part to heavy incentives."

GMC ties ad series to success in survey

By Arlena Sawyers
AUTOMOTIVE NEWS STAFF REPORTER

PONTIAC, Mich. — GMC Truck Division hopes the one-two punch of J.D. Power and Associates and a new advertising campaign can do for compact trucks what it did for Buick LeSabre just three months ago.

GMC Truck is developing a new ad campaign touting its position as the No. 1 compact truck in Power's September New Car Sales Satisfaction Index.

"If I were a customer in the marketplace, I'd look at the SSI survey and think it was a good signal," said Sandra Dellinger, GMC Truck national advertising manager. "We are very excited. We will continue to express the quality in our products and our quality salespeople. We hope it will increase sales."

LeSabre's ranking as top domestic model in Power's June Initial Quality Survey helped Buick double last year's sales of LeSabre during the first 20 days of July.

The GMC campaign breaks in mid-November with a full-page ad in Automotive News congratulating GMC Truck dealers for earning top honors. Television ads — incorporating the Power Sales Satisfaction Index information — will begin shortly thereafter. Also, a billboard campaign is in the planning stages.

Dellinger said the ads will be "very direct, much like Mr. Iacocca's 'these are the facts' " messages in Chrysler ads.

To conduct the survey, Power polled owners three months after the purchase of their new vehicles about their sales experiences. Customers were asked, among other things, to evaluate salespersons on honesty, knowledge of model and features plus financing options.

This is the first year the survey included buyers of new compact trucks. There were 13 compact truck nameplates (counting Chevrolet and Geo as one) vying for top honors in one or more of the segments: pickup sport-utility and van.

GMC trucks included in the category are S-15 Jimmy, S-15 pickup and Safari compact vans. GMC sold 131,821 compact trucks from Oct. 1, 1988 through Sept. 30, 1989.

The second position was held by another GM product, Chevrolet/Geo, which scored 102 points in the survey. Ford claimed the third spot with 101 points, closely followed by Toyota which scored 100. The industry average is 82.2 points.

As a segment, compact pickups earned an overall Sales Satisfaction Index score of 100; compact vans scored, 36 and compact sport-utilities, 84.

OPINION

GM must improve its human relations when it shuts plants

General Motors will certainly close some assembly plants during the next few years. In plants across the continent, tens of thousands of employees know that GM can build far more cars than it can sell.

GM tries to be a humane corporate citizen when it closes a plant; while politicians campaign to require a few months' notice of impending plant closings, GM always gives far more notice than any politician ever talks about.

But the No. 1 automaker is going to have to do better if it hopes to achieve more productive relations with its workers, their communities and the North American population.

GM recently announced some plant shufflings. There was one winner, a plant in Flint, Mich., that will get van production that is currently done at Lordstown, Ohio, and Scarborough, Ontario. The people on the van line at Lordstown at least can start planning some changes.

But Scarborough employees and workers at two other plants are on the never-never-land list. They must wait to find out if GM will bless them with a new product.

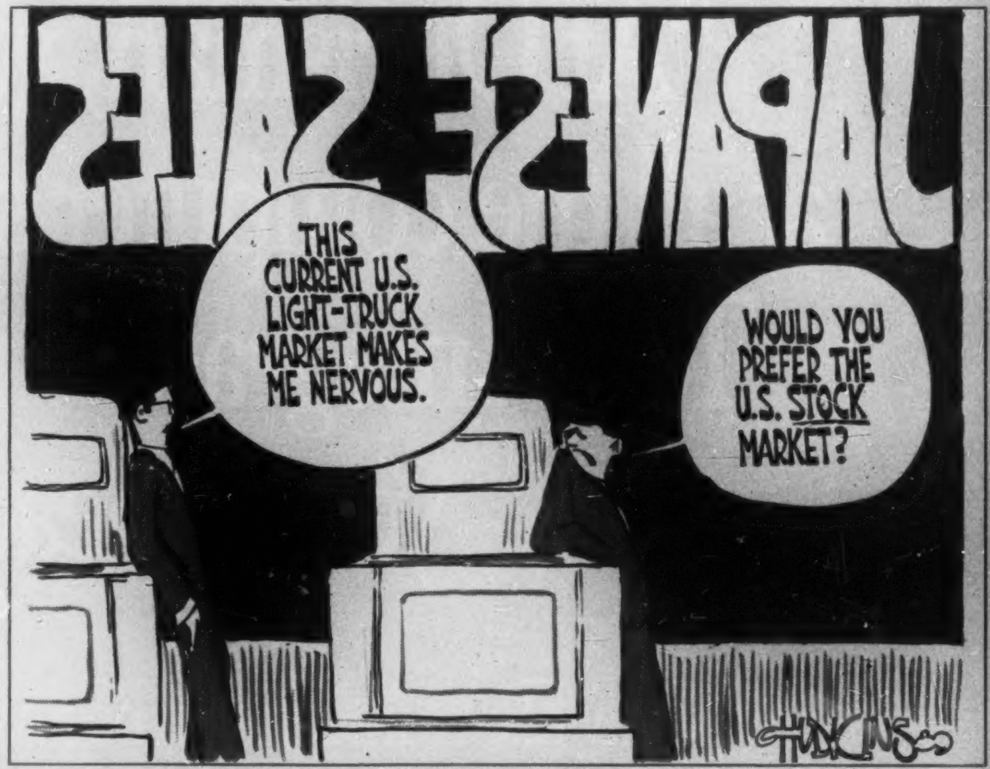
Look at the employees at the Van Nuys, Calif., plant, which builds the aging Camaro and Firebird models. Those workers were told that if those cars are replaced, the replacement will go to Quebec. Meanwhile, GM told the plant to continue looking at producing vehicles that might feasibly be produced for the West Coast market.

This comes from the company that couldn't make money on 40,000 Pontiac Fieros a year, and thus closed the plant whose workers did everything for the company but whistle the GM anthem while they worked. The Fiero workers — held up as the model of cooperative, productive American employees — didn't even qualify for the limbo that Van Nuys and Scarborough got.

After the announcement, the UAW is angry, the Canadian Auto Workers are angry, and workers at three plants have no particular reason to feel loyalty toward General Motors.

In a difficult market and with awesome responsibilities to people, GM has to do better. Its plan to achieve 100 percent utilization of capacity will inevitably mean closings and human misery.

But GM can shorten the time that plants are in limbo, while still giving plenty of time to prepare for a certain closing. And it can be honest with workers whose plants are on the hit list. Playing plants off against each other — and then making decisions that aren't really based on the cooperation of the workers — defeats an important piece of what GM is trying to achieve: better human relations.



JAPANESE SALES
THIS CURRENT U.S. LIGHT-TRUCK MARKET MAKES ME NERVOUS.
WOULD YOU PREFER THE U.S. STOCK MARKET?

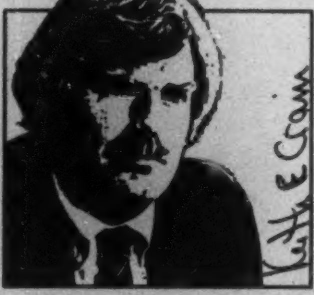
The fight for Jaguar is going to be bloody

The Ford Motor Co. executive promised his wife a Jaguar for Christmas. The General Motors executive promised his wife that she could have a Jaguar for her birthday. The automobile supplier promised himself a Jaguar any old time he could get away with it.

That is the real dynamic behind the attempted purchase of Jaguar plc by Ford or General Motors. Forget poor old Sir John Egan, the Jaguar chief executive. He doesn't count any more, and I'm not sure he knows it yet.

The British government's "golden share" will delay any takeover and will certainly influence the outcome for this well-regarded British marque.

But the real force, deep down inside, is that — customers aside, suppliers aside, even employees aside — every executive at Ford and GM wants to own Jaguar plc and maybe even drive a Jaguar. Throw away the keys to your Cadillac Fleetwood! Junk your brand-new Lincoln Town Car! Now, one of the two biggest companies in the automobile business is going to own a real jewel. Not something funny that nobody understands, like Ford's Aston Martin. Not a little engineering company that makes cars, like GM's Lotus.



This is big time, and the winner is going to be able to drive home with the prize.

No chance for second place. No ties. Winner take all.

If you're going to buy Hughes or some bank, then you analyze the finances and marketing, and you take your best shot. Those are simple business decisions: what is right financially for GM or Ford.

But when we think about Jaguar, we have passion and lust. Now we have something that every American schoolkid can get involved in with old Dad. They know what Jaguar is all about. They can almost smell that Connolly leather. They want to be the first on their block to have a really neat car — something special that will make the gasoline in their blood start to percolate.

In this battle of the titans, it is still anybody's guess as to who will win. In the next year and a half, Ford or GM is going to acquire what may become the plum of the 1990s.

Strange things happen when rational men become swayed by emotion. There are few things that will raise the blood pressure of an auto man like a Jaguar. Jaguar has that appeal.

It's strange: If Jaguar had figured out how to harness its own magic, then there wouldn't be a couple of suitors hanging around the front porch.

Mitsubishi Fuso seeks 20 dealers; has 122

By Joseph Bohn
AUTOMOTIVE NEWS STAFF REPORTER

INKSTER, Mich. — Mitsubishi Fuso Truck of America signed its 122nd dealer here — a diesel repair shop that sells Marmons.

Jim Graham's Garage sold only a half dozen Marmons last year, according to Bill Witzke, shop manager. It is what its name suggests — a garage.

But Mitsubishi Fuso of Bridgeport, Conn., has had good results in signing inexperienced dealers.

The company's No. 1 dealer, Tri-County Truck & Equipment in Pompano Beach, Fla., never sold a new truck until it took on a Mitsubishi Fuso franchise a few years ago, according to Thomas E. Reimers, Mitsubishi Fuso Truck of America executive vice president and chief operating officer.

Reimers

Last year, the dealership retailed between 140 and 150 Fusos.

Reimers said repair shops typically have good reputations in their communities and can influence a customer to purchase one of their trucks when they take on a franchise.

It plans to sign about 20 more dealers by early next year to reach its goal.

Reimers added that it usually takes $22,000 to $26,000 to get a Mitsubishi Fuso franchise. About one-third of that is for parts; one-third is for special tools to work on the product; and the balance is for signs and merchandising materials.

Mitsubishi Fuso's sales, along with those of other cabover truck models, have been growing slowly. They account for less than 20 percent of Class 4-7 sales.

Reimers sees the cabover, or low-cab-forward, segment of the medium-duty market continuing to grow in 1990.

He believes the overall medium-duty market will be flat next year, producing about the same 170,000 sales projected for this year.

He expects some customers to be drawn into the market next year in order to avoid the cost of stiffer emissions requirements on 1991 medium- and heavy-duty diesel engine models.

Hino Diesel Trucks introduces remanufactured parts program

ORANGEBURG, N.Y. — Hino Diesel Trucks has entered the remanufactured parts business to support its line of medium-duty diesel trucks.

The program's purpose is to provide readily available, reasonably priced quality parts for Hino owners, according to F. Guy Bradford, Hino's assistant national parts manager.

To kick off the program, the company is offering starters and alternators for its full line of trucks.

They are remanufactured by Nippondenso of Japan, the firm that produces the original parts for the truck making company.

Bradford said Hino is using the Japanese supplier to ensure that its remanufactured parts meet original quality standards.

Hino has about 100 dealers nationwide. They are supplied through parts distribution centers in New York, Atlanta and Los Angeles.

Bradford said the centers provide a same-day fill rate of more than 97 percent on all orders.

He added that the remanufactured starters and alternators carry a Hino parts warranty honored by all the company's dealers.

More power and torque slated for Navistar 466 diesel engines

CHICAGO — Navistar International plans to increase the horsepower and torque of its 466 series diesel engines next year to satisfy requirements of key markets.

Along with new power ratings on the 466, all Navistar engines will be in compliance with 50-state emissions standards. Special California ratings will no longer be required.

Navistar plans to come out with a new top-end rating of 270 horsepower at 2,400 rpm and a peak torque of 740 pounds-feet at 1,600 rpm on its 466 series, beginning in March 1990.

Those engines are geared for vehicles that require high peak in mid-range models. They include municipal vehicles, dump trucks, utility vehicles, short haul/urban delivery and materials delivery and refuse vehicles, according to Chris Benner, Navistar's manager of medium-duty drivetrain planning.

In January, the DTA 466 will also offer an engine that develops 220 hp at 2,400 rpm with a higher 590 pounds-feet torque rating at 1,600 rpm.

At the same time, the DTA 466 will also offer a 245-hp rating at 2,400 rpm, with a higher 635 pounds-feet of torque at 1,600 rpm.

The DTA 360, also available in January, will offer a new 185-hp rating at 2,700 rpm and 435 hp at 1,700 rpm, as well as its previous 170 hp at 2,700 rpm and 400 pounds-feet of torque at 1,700 rpm.

The DTA 360 and Navistar's 7.3-liter are targeted toward more cost-sensitive markets such as municipalities and school bus fleets.

Their choice is determined by power requirements, the engine's rebuildability and sheer operating economics, according to John Toole, Navistar manager of product planning, engine and foundry division.

AROUND THE WORLD

Lotus Elan U.S.-bound at $33,000

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

The Lotus Elan made its debut Wednesday at the London Motorfair.

HETHEL, England — Lotus Cars has unveiled its new Elan sports car that is headed for the United States. The car is the successor to the British firm's 1960s' vintage two-seater of the same name.

The General Motors subsidiary presented the car at last week's Motorfair in London and will exhibit it at the Tokyo auto show, which opens Thursday.

The Elan will enter the U.S. market late next spring at a base price of $33,000, according to Ronald Foster, president of Lotus Cars U.S.A.

Lotus plans to allocate only 1,000 units to the United States out of a total production of 3,000.

Foster said restricting volume protects against currency fluctuations by reducing the manufacturer's dependence on the United States. Lotus' strategy also calls for 1,000 Elans for Europe and 1,000 for the Far East.

The front-wheel-drive Elan uses an Isuzu-based drivetrain. The body is unusual: a multi-piece bonded, riveted and bolted fiberglass-reinforced plastic and steel composite structure. The single-piece floorpan is made of reinforced fiberglass.

The 1.6-liter engine is offered in turbo or naturally aspirated form, though only the turbo will be sold in the United States. American cars will have air conditioning and power steering.

Elan development costs are part of a £36 million ($56 million U.S.) investment program at Hethel (Lotus' headquarters) that is split between car development and new production facilities.

Group Lotus Managing Director Michael Kimberley said 1,400-1,500 Elans will be produced next year and 3,000 in 1991.

The additional 3,000 cars will bring total Lotus output to 5,000 units annually, compared with 1,200 during the 1989 model year.

Production begins in November and cars are scheduled to reach dealerships in the United Kingdom in January. The convertible will be offered first, followed by a hardtop three months later.

The Elan went through three incarnations before the final design was completed in November 1986. The result is a short, uncluttered shape, with a wide stance, minimal front and rear overhang and sharply raked windshield. The drag coefficient is 0.34 with the top up, 0.38 with the top down.

Though some cues from the previous Elan are retained, chief designer Peter Stevens said an evolutionary design was sought.

The new Elan is 3½ inches longer and 12 inches wider than the old model, measuring 149.7 inches long and 68.3 inches wide, excluding mirrors. The 88.6-inch wheelbase is 5 inches longer. And at 2,249 pounds, the new Elan is 490 pounds heavier than the old Elan Sprint.

Stevens said the fwd, transverse-mounted-engine package allows new proportions.

"The mechanical layout gave us the cockpit space for increased footroom," said Kimberley.

But Roger Becker, Lotus' ride and handling chief, said the move to fwd was "dynamically led, to establish new standards," not dictated by packaging needs.

"We were looking for something completely different," he said. "We could have easily done a rear-wheel-drive car with good results, but we are a technology-led company, and a '90s Elan has to be something special."

He said the torque-steer problem associated with fwd is controlled with a new suspension system dubbed "interactive wishbone" on the patent application.

Instead of a conventional wishbone arrangement, each front suspension assembly is mounted on a separate aluminum raft. The system offers wheel fore-and-aft compliance without sacrificing steering precision, handling and traction.

The 137-mph turbocharged Elan SE is powered by a 1.6-liter, 16-valve four-cylinder "Isuzu-Lotus" engine mated to a five-speed Isuzu manual gearbox. The powerplant develops 165 horsepower, and Lotus reports a 0-60-mph time of 6.7 seconds.

The naturally aspirated Elan produces 130 hp, with a top speed of 122 mph and a 0-60-mph time of 7.6 seconds.

Kimberley insisted there was no pressure from GM to use the powertrain from GM-affiliate Isuzu. "We looked at every cotton-pickin' engine we could find," he said. "We chose an engine that was an idea on a drawing board at the time. That way we could be involved in the development rather than take something off the shelf."

European sales drop after two-year wait

By Richard Johnson
AUTOMOTIVE NEWS STAFF REPORTER

FRANKFURT, West Germany — Evidence of a long-overdue downturn in the European new-car market is beginning to accumulate as the first monthly sales decline of the year occurred in September.

Sales fell 3 percent last month following a 3 percent rise in August, according to industry estimates compiled by Automotive News. Sales were virtually flat in two of the three prior months.

Industry experts have been predicting a slump for almost two years. Instead, new-car sales in Western Europe totaled nearly 13 million in 1988 and were 4.1 percent ahead of last year's record pace during the first three quarters of 1989.

"The market is tailing off, but it will still be an all-time record year," said John May, of Automotive Industry Data in Britain.

September new-car sales totaled 969,700. Nine-month volume was 10,432,700.

The West German and British markets — Europe's two largest — fell back in September, while sales in Italy and France topped the same month in 1988. Germany's monthly decline was traceable in part to a record September in 1988. Sales here last month also suffered from a shortage of catalytic-converter-equipped cars in dealerships due to vacation production shutdowns, industry analysts said.

"Germany will pick up again," said May. "It will do no worse in the fourth quarter than it did last year."

Three German firms heavily dependent on the domestic market — Volkswagen, BMW and Mercedes-Benz — declined by the biggest margins during the month. VW, which moved past Fiat Auto into first place in August, saw its lead shrink in September as Fiat outsold the West German group by about 7,100 units.

A Fiat spokesman, commenting on VW's first place in August, declared, "We are not giving up."

Indeed, some statistical sources say Fiat edged into the lead in September. Helped by an Italian market that rose more than 16 percent, Fiat Auto (including Alfa Romeo and Lancia) advanced 8.3 percent to 146,000 units in September. Through the first nine months, Fiat was up 3.7 percent to 1,519,900 in Europe, a 14.6 percent share of the market.

VW, which includes Audi and Seat brands, retailed 138,900 cars in September, down 13.3 percent from 1988. In Germany alone, where the market was off by just over 18 percent, VW declined 27 percent in September to 55,600 units. VW Group sales in all of Europe rose 5.5 percent to 1,544,700 for the first nine months of this year, a 14.8 percent share.

Peugeot S.A. was third in the European rankings with a 12.7 percent share for nine months on sales of 1,328,200, a volume gain of 5.2 percent. Ford was next with an 11.8 percent share on nine-month volume of 1,228,600, a 6.1 percent increase.

General Motors, this year's top gainer among Europe's six high-volume makers, was up 8.7 percent for 1989 on sales of 1,156,500 — an 11.1 percent slice of the market. Renault followed with a 10.1 percent share for 1989 on sales of 1,057,200, up 7.1 percent over its nine-month total in 1988.

Sales of Japanese cars dipped 11 percent to 114,200 units in September. After nine months, sales were 0.8 percent below last year's at 1,139,900.

West Germany, Europe's largest market, remained 0.2 percent ahead of last year with nine-month volume at 2,157,700.

Britain was 5.1 percent above 1988 for the nine months with 1,919,300 new-car sales.

Italy rose sharply in September, bringing nine-month volume to 1,794,900, 7.3 percent above 1988. French sales were up 7.4 percent through nine months at 1,678,400. Spanish sales after three quarters were 7.6 percent ahead of 1988 at 857,000 units.

Imports suffer in September; car sales decline 8%

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

September was a dreary month for most importers, with car sales off 8.1 percent from a year ago.

That brought import car sales for the first nine months of 1989 to 2.17 million units, down 6.7 percent from the first three quarters of 1988.

The only group doing well is the Japanese. Although September sales were down 4.5 percent and year-to-date sales were off 2.3 percent, that is a strong showing in view of the fact that six of the nine Japanese automakers are boosting U.S. production. Their declining import totals are being more than offset by gains from U.S.-built cars.

European cars were off 8.9 percent in September and 12.7 percent for the year.

September provided some solace to four European makes that had seen sales fall through the first eight months. Peugeot, Audi, Mercedes-Benz and Alfa Romeo posted sales gains ranging from 3 to 32.6 percent for the month.

The list of winners is rather short. Daihatsu, Nissan, Acura, Mitsubishi and Ford Festiva had sales gains for September and for the first three quarters. Volvo remains alone among Europeans in gaining ground for the year so far, despite a 7.2 percent decline in September.

Of those, September was kindest to Chevy, which gained 12.6 percent, and cruelest to Subaru, which was off 31.6 percent. But last month Subaru began producing its first cars in the United States, at a new plant in Lafayette, Ind.

Among importers with falling sales this year, Jaguar, Saab and Pontiac's Korean-built LeMans have suffered declines ranging from 6.9 to 12 percent.

Others have been hit much harder. Hyundai, Porsche, Sterling, Maserati, Merkur and Yugo all have posted nine-month loses ranging from Hyundai's 30.1 percent to Yugo's 68 percent.Merkur suffered an 80.8 percent drop in September, from 1,634 to 314 units.

Some companies don't fit into tightly drawn categories.

Honda and Toyota have posted import sales losses so far this year, but the figures don't reflect either the gains in U.S. production for their main brands or the shift in import allocations to their luxury brands, Acura and Lexus. In addition, last month's 23.7 percent drop for Honda can be attributed to a temporary shortage of Accords during a model changeover.

Mazda, which had a 1.9 percent decline for the first nine months of 1989, also is increasing U.S. production.

Chrysler imports were down 18.6 percent for nine months, but Chrysler is giving up some of its import allocation to Mitsubishi in exchange for increased production from the Chrysler-Mitsubishi joint-venture assembly plant in Normal, Ill.

Isuzu's 26.7 percent decline for mine months and 65.9 percent dropoff in September is misleading. Isuzu is replacing both its car models, but new cars haven't started arriving in showrooms. The company also is shifting emphasis gradually to trucks, which are not reflected in these figures.

Subaru holds most car prices — for now

By Lindsay Chappell
AUTOMOTIVE NEWS STAFF REPORTER

BLOOMINGTON, Ind. — Subaru of America will hold prices on many of its 1990 models this fall but expects to increase them after the first of the year.

The freeze, which applies to vehicles that were not upgraded for the new model year, is further evidence of the industry's caution as it starts the 1990 season. In recent weeks, several Japanese and European makers have held the line or cut prices on their 1990 models.

Subaru's entry-level, three-door Justy will be priced at $5,866, the same as the 1989 model. The company will also maintain prices on the Legacy models, which were introduced in April as 1990 models. Legacy prices begin at $12,499. The base sedan, priced at $11,299, has been dropped.

Two-wheel-drive versions of the XT sports car start at $13,071, also the same as last year.

While prices have been kept in check, "We anticipate there will be a price increase in the near future, after the first of the year," said Thomas R. Gibson, president and chief operating officer of Subaru of America.

Cars in the Loyale line — the new name for Subaru's previous generic sedans, wagons and coupes — are generally $400 to $800 higher than the models they replace, but the base sedan at $9,299 is $432 less than last year's closest equivalent, the DL sedan.

Prices on four-wheel-drive Justy and XT6 models also went up.

The price plan kicks off what is expected to be a flat sales year. Subaru is forecasting 1989 calendar year sales at 140,000 to 150,000 cars. Sales for 1990 will be "about the same as this year," Gibson said.

He said the company's expectations for 1990 are tied in part to a planned reduction in fleet sales. The company expects to sell 5,000 to 10,000 fleet cars in 1990, down from an estimated 30,000 this year.

"As we introduce our new Legacy, we don't want to put a huge number of cars through the fleet side and flood the resale market," Gibson said. "We believe that by reducing our fleet sales we can help our dealers' overall sales effort."

Gibson said the drop in fleet sales will offset sales gains made by new models, the compact Legacy and the subcompact Loyale. Legacy sales reached 5,200 in August but slipped to 4,883 in in September. The company said Legacy sales currently constitute half of its U.S. volume.

Gibson said the company has been surprised by a larger-than-expected demand for high-end Legacy LS sedans, which are positioned to compete against the Honda Accord and Toyota Camry. But he said Subaru is "scrambling" to get an adequate supply.

He also said the 1990 Loyale will not be available to U.S. dealers until November, when 1989 models are expected to be sold out.

POLING

FROM PAGE 3

uar) are in," said Poling.

Ford is also considering other joint ventures as it and other automakers look for overseas and domestic partners to share manufacturing and development costs.

Ford announced on Friday, Oct. 20, that it is no longer holding discussions with Swedish automaker Saab-Scania.

At the same time, Poling said Ford has no objection to the recent announcement that GM and Chrysler Corp. would form a powertrain joint venture.

Ford's relationship with Mazda and Nissan to develop vehicles in Europe and North America, and with Volkswagen in Brazil and Argentina are actions along the same lines, Poling said.

Ford could feasibly do another joint venture project with Nissan and/or Mazda, but Poling declined to be specific.

Ford is also looking at joint ventures with other manufacturers. Poling said Ford has been talking to representatives from the Soviet Union about the on-again/off-again joint venture in that country, but no decisions have been made.

Ford's own world car program — the Tempo/Topaz replacement codenamed the CDW27 — has recently had an extensive review by Poling, Ford Automotive Group President Philip Benton and Louis Ross, executive vice president international automotive operations.

Insiders report that the next Tempo/Topaz will be launched in the 1992 model year in the United States. Poling said he is pleased with the progress of the CDW27 and sees substantial benefits in such world programs.

Poling said that during the next five years, Ford will spend substantially more than the $19 billion it spent during the last five years on capital spending. A "substantial part" of that capital spending will be devoted to replacing all of Ford's current powertrains.

The increased spending for tools and facilities, plus the rising cost of retail incentives on its vehicles, are two of the biggest factors affecting Ford's earnings right now, said Poling.

He declined to predict whether Ford can top its record 1988 earnings of $5.3 billion.

Poling agreed that new products from GM divisions will make it more difficult for Ford to keep up its string of sales successes.

"We are not going to get the same improvement in share in the next eight years that we have in the last eight years," Poling said.

"If you just hold your own in this environment and continue to improve your quality and continue to improve your costs — you are going to have a very strong company."

Ford will likely end the 1989 calendar year with a 22.6 percent share of the U.S. car and truck market, but Poling would like to see more improvement. And the difficult sales environment will take victims as competition intensifies and overcapacity increases.

"I think the over-capacity situation is so serious that the number of companies you have competing in this market will not be able to exist for 10 years — if that long — in their present size and form," Poling said.

PRODUCTION

Car output 14,000 off weekly norm

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

Domestic automakers fell almost 14,000 units short of normal mid-October output last week with a schedule of 141,778 cars.

Slow sales and bulging inventories continue, causing automakers to cut back their schedules. Last week's estimate was 0.24 percent below the prior week's production and 12.58 percent below the year-ago week's total.

Last week's estimated production was split as follows: General Motors, 43.59 percent; Ford Motor Co., 26.56 percent; Chrysler Motors, 14.04 percent; Honda of America Manufacturing, 5.01 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.15 percent; Toyota Motor Manufacturing U.S.A., 2.86 percent; Diamond-Star Motors, 2.04 percent; Nissan Motor Manufacturing Corp. U.S.A., 1.48 percent; and New United Motor Manufacturing Inc., 1.27 percent.

Truck output was targeted at 69,842 units last week, 9.34 percent more than the previous week's but 14.71 percent less than the year-ago week.

GM will shut its Fairfax, Kan., plant for two weeks beginning Oct. 30 and will close its Wilmington, Del., plant for two weeks on Nov. 6 because of high inventory.

The following GM plants resumed output today after being idle due to sluggish sales: Oklahoma City; Moraine, Ohio; Shreveport, La.; Flint, Mich.; and Pontiac West in Pontiac, Mich.

GM extended downtime at its Linden, N.J., plant until Oct. 30 because of high inventory. The facility had been scheduled to reopen today.

Ford's Kentucky Truck plant in Louisville is closed this week because of slow sales.

Chrysler shut its Toledo, Ohio, Jeep plant today for inventory adjustment. The plant is scheduled to reopen Oct. 30.

Mack Trucks said its plant in Macungie, Pa., will return to full production Oct. 30. The plant has been idle since Oct. 16 due to a work stoppage at a facility that supplies truck cabs to Mack.

16-month high for Canada cars

Canadian makers' scheduled output of 24,201 cars last week, the highest since the 24,730 cars built the week ended June 18, 1988.

Last week's estimated production was 38.92 percent above the previous holiday week and 10.11 percent above the year-ago week.

So far this year, 782,208 cars have been assembled, 9.08 percent below last year's total at this time.

Truck production was scheduled at 20,778 units last week, 31.81 percent above the prior week but 2.68 percent below the year-ago week.

Year-to-date, 767,889 trucks have been produced, 2.87 percent more than the year-ago total.

Chrysler Motors' Brampton, Ontario, plant remains idle due to high inventory of the Premier.

Tough 15 months ahead

Recession is coming, Iacocca warns

By Mary Connelly
AUTOMOTIVE NEWS STAFF REPORTER

HIGHLAND PARK, Mich. — Chrysler Corp. Chairman Lee Iacocca said the company anticipates at least one assembly plant closing, product delays and limited white-collar layoffs because the U.S. auto industry is heading for a "tough" 15 months.

In an interview, he also said that Chrysler will sell only profitable vehicle lines and will not buy market share because such a strategy is "uneconomic" and leads to a "profit-margin recession."

"We will accept profitable share," Iacocca said. "If all cars are not profitable, we are not going to just build them for the hell of it."

Chrysler already is battling to hold share. Its U.S. car and light-truck share fell from 14.3 percent in the 1988 model year to 13.7 percent in the 1989 model year.

Iacocca said Chrysler is studying the closing of at least one plant because of production overcapacity in the U.S. market. Chrysler in 1988 closed its Kenosha, Wis., assembly plant, idling 5,500 workers.

"I've been saying for five years — and I've got to be right one year — that the recession is coming," Iacocca said. "I think we are going to have a downer. If I had to pick a year, I'd pick 1990 as more than a transition year. It is going to be a difficult year."

Iacocca said that during a visit to Washington last week, he planned to lay out the difficulties facing the industry.

"They don't know that there is a war on," he said. "They don't have the foggiest idea. If I take all of the GM and Ford plant closings and all of ours for six months, I can show the masking and camouflaging through job banks and unemployment how difficult it is. Am I saying the worst is yet to come? I don't think we've bottomed out yet. That is what I am saying."

Iacocca did not specify when the anticipated wave of plant closings in the United States will strike Chrysler. The company is holding meetings to consider which plants might be vulnerable for closure and the timing of the closings, he said.

"We definitely will have to close more than we have closed to date — which is a 100-year-old plant called Kenosha," Iacocca said. "There is a plant or two that probably will be closed.

Palmer group builds top dealer empire

By Edward Lapham
AUTOMOTIVE NEWS STAFF REPORTER

The Arnold Palmer Automotive Group is expected to complete additional dealership acquisitions this week, making Palmer the largest dealer organization in the United States with annual revenue of $1.3 billion and 100,000 new-unit sales.

The Palmer organization already has dealerships in Pennsylvania, North Carolina and South Carolina.

James O'Neal Jr., group president and partner of longtime professional golfer Arnold Palmer, confirmed last week that the group has acquired Gowen Oldsmobile-Jeep-Eagle in Charlotte, N.C.

O'Neal also confirmed that Palmer's holding company, APAG Holdings, has agreed to acquire the Coggin O'Steen chain, with 10 dealerships in Florida and Kentucky, and has agreed to acquire Jordan Volkswagen-Daihatsu, also in Charlotte.

Arnold Palmer, left, and partner James O'Neal Jr.

O'Neal Friday declined to confirm or deny reports that APAG Holdings also will acquire the Don Massey group, with dealerships in Michigan and Colorado, and the Brown group with dealerships in Florida.

"We are involved in talks with other groups, and I really can't comment at this time," O'Neal said.

He confirmed that APAG Holdings is talking to several "Wall Street institutions" about private financing for the conglomerate. "We are not talking about public financing," O'Neal said.

PROFITS SKID

Big 3 U.S. auto operations in the red

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

DETROIT — The automotive industry has dodged and weaved speculation of an inevitable downturn for years, flaunting robust earnings at doomsayers every quarter.

But its fortunes may have taken a turn for the worse. Last week General Motors and Ford Motor Co. reported huge declines in third-quarter profits, largely due to losses on their U.S. car and truck operations.

And though Chrysler Corp. showed a hefty earnings increase over the third quarter of 1988, it had to sell nearly 44.5 percent of its stock in Mitsubishi Motors Corp. to do it.

Earnings from overseas operations and subsidiaries appeared to be the Big 3's salvation in the third quarter, while profits at home were ailing.

Ford Motor Co. lost $37 million in its U.S. automotive operations, down from a profit of $341 million last year. The last time Ford reported a loss at home was in the fourth quarter of 1982.

And Chrysler lost an estimated $54 million in its North American automotive operations.

After 5 generations, family will drop its GM dealership

By Michelle Krebs
AUTOMOTIVE NEWS STAFF REPORTER

One of General Motors' oldest dealerships will be sold this week after five generations of family ownership. The family says it doesn't want to battle with the automaker any longer.

The sale of Carpenter Chevrolet of Durham, N.C. — a GM dealership since 1915 — to another North Carolina family will be finalized this week.

Marcus G. Carpenter Jr., president and fourth-generation owner, said he decided to sell after GM threatened to cancel his franchise under the automaker's controversial Dealer Improvement Program.

Carpenter said in May 1988, he received a letter from GM stating the franchise would be terminated if the dealership didn't sell 2,000 vehicles a year. It sells just over half that amount.

Carpenter said Chevrolet continually raised the dealership's sales target to an unrealistic level, not taking into consideration the strong recent competition in the area.

In the past two to three years, Carpenter said, strong dealers have purchased Chevrolet stores in the area, made multi-

The Ford 4wd battle:
Chevrolet ads say the Ford Ranger 4x4 loses the pickup race to 4wd S-10s because Fords should back up briefly when switching back to two-wheel drive. Page 3.

Ford readies campaign to get Chevy to back down on pickup ads, above

Ford calls Chevy ads unfair and threatens to get even

By Laura Clark
AUTOMOTIVE NEWS STAFF REPORTER

DEARBORN, Mich. — Chevrolet is misrepresenting Ford trucks in a new round of television spots, according to Ford Division General Manager Thomas Wagner, and Ford is threatening to get even unless Chevrolet stops.

Wagner said Ford is preparing story boards for its version of a competitive campaign comparing its products to Chevrolet's. Ford, which has said that it would not get into a mud-slinging contest with Chevrolet on advertising, threatens to release the campaign if Chevrolet continues to misrepresent Ford products in the comparison ads.

Ford Motor Co. and General Motors lawyers have been meeting for a month because of two Chevrolet spots that compare the two divisions' trucks. In one spot, a four-wheel-drive Chevrolet S-10 pickup and a Ford Ranger 4x4 are compared on 4x4 conveniences. In the other, the all-wheel-drive Chevrolet Astro is compared to two-wheel-drive versions of the

Electrically heated catalyst tested

Could do better job on HC and CO, EPA says; makers cautious

By Jack Keebler
AUTOMOTIVE NEWS STAFF REPORTER

Electrically heated catalysts that get hotter faster than standard catalysts could be the answer for stricter vehicle emissions standards, according to the EPA.

Tests at the EPA's emissions lab in Ann Arbor, Mich., indicate that an electrically heated catalyst could reduce hydrocarbon and carbon monoxide pollutants from gasoline-powered vehicles more than 50 percent better than current catalysts. And in methanol-powered cars, tests show the virtual elimination of formaldehyde pollutants.

But automakers and their catalyst suppliers are hesitant to call those unproven catalysts cure-alls for emissions requirements.

One industry source said the new catalysts could cost twice as much — or even the same — as current catalysts, depending on where emissions regulations go and how well the systems are optimized for specific model applications.

And although EPA tests indicated significant CO and HC cleanup, higher levels (still within current federal standards) of nitrogen oxide pollutants were measured.

Research efforts at the Big 3, Toyota and Nissan will focus on problems associated with the enormous power draw of a resistively heated catalyst, length of time for catalyst warmup, unit durability and cost.

Camet Co., a W.R. Grace & Co. affiliate based in Hiram, Ohio, has already submitted samples of its electrically heated catalyst to the EPA.

"We're playing ball with the EPA," said Richard Cornelison, Camet president. "And so far, it's worked out pretty well."

Cornelison said the device can reduce gasoline engine hydrocarbons as much as 50 percent when measured over the entire driving cycle of a gasoline engine, compared with existing 3-way catalyst systems.

Harendra S. Gandhi, manager of Ford Motor Co.'s chemical engineering department, said Ford had mixed test results.

"It's very early, and there are no clear-cut results," he said. "People know that their biggest advantage is during cold-start. But they must warm up. And then you have a diesel glow-plug waiting problem."

Chrysler Motors is also in the early stages of a research program on electrically heated catalyst technology.

"The first problem is they're going to be expensive," said Mike Brady, supervisor of catalyst development for Chrysler. "And the data that the EPA generates is from fresh catalysts. I worry about 50,000-mile durability."

General Motors' advanced engineering staff has been examining electrically heated catalyst technology since "late spring." Research technicians are testing three different units, according to David Singer, a master technician in advanced product engineering. GM's electrically heated catalyst efforts are focused on "energy requirements" and fuel efficiency.

"One of the things that could make this attractive would be some gains in packaging and durability," said Singer. "But the size of the catalyst will mostly depend on where emissions standards wind up."

Energy used to heat the catalyst would have to be replaced, said Singer, explaining the company's fuel-efficiency concern. Replacing the additional battery draw will mean driving the alternator, and thus the engine, harder.

Karl Hellman, chief of control technology and applications at the EPA's Ann Arbor emissions lab, said catalyst makers are walking a tightrope.

"On the one hand, they like us to conduct the tests on their units because we do real FTP (federal test procedure) emission tests on their concepts," Hellman said.

"Of course, there's a risk. If it stinks, we say so. And automakers don't like their suppliers stealing their thunder or suggesting possibly more expensive and complicated emissions controls to the EPA. There's a whole breaking ranks thing."

Chicago suburb divided over truck ordinance

By Charles M. Thomas
AUTOMOTIVE NEWS STAFF REPORTER

Like police officers everywhere, those in tiny Flossmoor, Ill., warily patrol neighborhood streets at night protecting homeowners from evil denizens of the underworld.

But in this Chicago suburb, they also protect the 8,200 citizens from a different kind of scofflaw — the pickup truck owner.

For more than two decades, the community has had an ordinance essentially banning ownership of pickup trucks in the village.

Until May of this year, residents owning a pickup truck had to park it outside the village limits at night, or face parking tickets and fines from local police.

Then Jim Minx, a state law enforcement officer, moved into town bringing his 1984 black Mazda pickup truck with him. He was ticketed several times for parking it in his driveway overnight.

"Village officials told me I couldn't park my pickup truck anywhere in town," he said.

"I couldn't park it in my driveway or even my garage. They said it would ruin the aesthetic beauty of Flossmoor."

He complained at village board meetings and even organized a citizens' group to protest the ordinance. It divided the sleepy village of Flossmoor at board meetings and in the local press where residents on both sides waged fierce letter-writing campaigns.

Finally, trustees amended the ordinance in May. Now pickup truck owners can hide their vehicles in the garage overnight without being ticketed.

But that isn't enough for Minx, who says some truck owners do not have garages and still face $10 parking fines handed out by police.

He is suing the village in U.S. District court in Chicago to have the whole ordinance overturned as unconstitutional.

"Village officials say pickup trucks denote blue-collar citizens," he says. "Pickup trucks have come a long way from just being used in the trades."

On the other side of the controversy stands Richard Rosenthal, a Flossmoor resident since 1957 and a commercial real estate agent. He staunchly defends the ordinance.

Rosenthal concedes pickup trucks have a different image today than 20 years ago.

But he said when the ordinance was adopted, the community felt the use and appearance of pickup

Mitsubishi shifts sales emphasis to higher volume

By Jesse Snyder
AUTOMOTIVE NEWS STAFF REPORTER

CYPRESS, Calif. — Mitsubishi Motor Sales of America's focus on core products in 1990 advertising is part of a long-range marketing strategy aimed at higher volume models by 1992.

Mitsubishi's spate of introductions will continue with four all-new models and a high-performance variant of the Galant in the next 24 months.

But while two cars will be repositioned in their segments, Mitsubishi will not expand into additional segments and "may begin to trim its garden," said Richard Recchia, executive vice president of general operations.

Mitsubishi is shifting its product strategy away from niches to higher volume, mainstream vehicles as the company increases dependence on U.S. production. The move is similar to changes Toyota and Nissan executives revealed earlier this fall.

Replacement models start arriving next fall with emphasis on performance, Recchia said.

Starion will be replaced by the 1991 3000 GT next fall, a $25,000-$31,000 range sports-touring car with all-wheel drive, four-wheel steering and four-wheel independent suspension in a 2 + 2 layout.

A prototype of the car, known as HSX, was at the Tokyo auto show last week.

The car will be powered by a twin-turbo, 24-valve 3-liter V-6 producing about 300 horsepower. Bigger and wider than the aging Starion, the 3000 GT is a touring car with a ride tuned for comfort, Recchia said.

A high-performance VR-4 Galant variant "with an engine we've never sold before" also is coming. The engine is believed to be a V-6 that will later show up in the 1992 Sigma.

The next-generation Sigma will arrive in the spring of 1991 as a 1992 model. It will represent a significant move upscale into a range Recchia described as "Toyota Cressida to the lower end of Lexus" in size and price. It will be much more oriented to U.S. market requirements than the current model.

It will debut with a V-6 producing about 160 to 170 hp in the base model and 200 hp or more in top trim. Recchia called rumors that it eventually would get Mitsubishi's first V-8 engine "good speculation." He added, "it all depends on how well it sells."

Also scheduled for the spring of 1991 is a tall wagon to replace the van. It will be front-drive and based on a passenger-car platform. It will be similar to, but larger than, Nissan's Axxess.

The new-generation four-door Montero sport-utility will debut in the fall of 1991. A two-door version is unlikely unless there is a change in U.S. import taxes, which subject two-door sport-utilities to a 25 percent duty.

Mitsubishi advertising this fall has evolutionary changes, but retains the "Mitsubishi. Suddenly the obviously choice" theme.

National advertising funds are increased "in line with (Mitsubishi's) sales goals of 200,000 vehicles in 1990," Recchia said. He expects 1990 calendar year car and truck sales to total 180,000, compared with 113,791 in 1988.

Recchia is hoping for a 1992 volume of 300,000 vehicles, with 500 to 600 dealers in operation. By year's end, Mitsubishi expects to have added more than 100 dealers, bringing the total count to 400.

If national advertising is proportional to projected volume, the 1990 budget would near $100 million. Only eight automakers — four Japanese — passed the $100 million level in 1988.

National and local advertising will tout core vehicles — Mirage, Eclipse, Galant, pickups and the Montero. Sigma, Starion, van and the Korean-built Precis will get very little advertising support in 1990.

Ford revamps Asia-Pacific unit with Booker as chief

By Timothy J. Dunne
SPECIAL CORRESPONDENT

Booker

Citing enormous growth potential for the auto industry in the Far East, Ford Motor Co. last week announced that it has established an organization to coordinate its activities in Asia and will place an officer in Japan for the first time.

The new organization, known as Ford Asia-Pacific for now, will begin operations Nov. 1. It will coordinate the Northern Pacific business development group based in Dearborn, Mich., and the Asia-Pacific organization based in Melbourne, Australia. Ford Asia-Pacific will coordinate operations of Ford subsidiaries in Japan, Australia, Taiwan and New Zealand.

Ford Chairman Donald E. Petersen made the announcement during a news conference in Tokyo. He cited anticipated growth in the region as the reason for the restructuring.

"Sixty percent of the automotive growth during the next 20 years is expected to be in markets where Ford has little or no manufacturing presence today. These markets include many nations in Asia," Petersen said.

W. Wayne Booker will head the Tokyo-based Ford Asia-Pacific operations. He has been elected a vice president of the company. Booker succeeds Mervyn H. Manning, president of the former Melbourne-based Ford Asia-Pacific organization, who will stay on to assist Booker in setting up the new organization.

Booker has been executive director of Ford's Latin American automotive operations since 1988.

Booker's responsibilities include coordinating the activities of Ford subsidiaries in Australia, New Zealand and Taiwan as well as Northern Pacific business development, which is responsible for Ford's relationships with Mazda in Japan and Kia in South Korea and other business activities in the Far East.

Ford exports the Ford Taurus and Probe and Lincoln Continental to Japan.

In calendar 1988, Ford shipped 7,460 North American-built vehicles to Japan, including 6,500 Probes and 33 trucks, a Ford spokesman said.

Ford was the leading exporter of North American-built vehicles to Japan last year, he said.

In 1987, Ford sent 1,106 cars to Japan.

Ford owns 25 percent of Mazda Motor Corp. in Japan. Mazda Motor Manufacturing (U.S.A.) Corp. builds the Ford Probe at its Flat Rock, Mich., plant.

The 1991 Ford Escort and Mercury Tracer will be built on the Mazda 323 platform.

Sales plunge 20%; cars, trucks slide

By Philly Murtha
AUTOMOTIVE NEWS STAFF REPORTER

Sales of U.S.-built cars and light trucks dropped 20.57 percent in mid-October because of payback from incentive-driven sales in August and September.

Two transplants were the only makers to report increases. Nissan scored gains in car and truck sales due to incentives and fleet deliveries; Toyota sold four times as many cars as in the year-ago period — before its Kentucky plant opened..

Market wariness hurt Oct. 11-20 car sales, according to an Illinois Buick dealer. A Florida light-truck sales manager said customers are waiting for more impressive incentives.

In mid-October, 253,112 domestic cars and light trucks were sold, down 20.57 percent from last year. Both periods had nine selling days.

General Motors' combined car and light-truck sales plummeted 28.90 percent. Ford Motor Co. sold 22.41 percent fewer vehicles than last year, and Chrysler Motors' domestic-vehicle deliveries fell 20.68 percent.

Following an early October downturn, the eight U.S. carmakers reported mid-month sales of 158,863 units, a 19.03 percent decline from last year.

Mazda sold 33.41 percent fewer MX-6s in mid-October and Honda's U.S.-built car sales dropped 14.12 percent below last year's total.

Each of the Big 3 sold fewer cars in the Oct. 11-20 span.

GM was down 24.82 percent with all five divisions reporting losses.

Ford delivered 21.17 percent fewer cars than in 1988, and Chrysler sold 23.69 percent fewer.

Nissan was the only light-truck maker to report an increase; sales rose 7.08 percent.

Chrysler's light-truck sales fell 17.52 percent. Ford's were off 24.22 percent, and GM reported a 26.53 percent decline from a year ago.

INTRODUCING VALUE GUARD USED,℠ THE NEW MECHANICAL REPAIR PROTECTION PLAN FOR USED CARS

VALUE GUARD USED provides you with customer satisfaction opportunities that will turn into additional profit opportunities for your dealership.

With VALUE GUARD USED, you can offer your customers terms up to 48 months/48,000 miles. An advanced tech option for electronic and luxury components. Coverage for wear and tear on custom plans. And all with one deductible per repair visit.

VALUE GUARD USED enhances the value of your used vehicles and also brings customers back to your dealership for repairs and service… even after warranties and other guarantees expire.

So if you want to see more profit, see your GMAC Branch Representative for details and availability.

Merkur death marks another failure for Big 3 captive imports

It has become one of the great fallacies: "I'm from Detroit and I can sell your cars in America."

Ford Motor Co.'s decision to stop importing and selling Scorpios was tough, but it was steeped in reality. It was obvious to everyone that the time had come to pull the plug on the Merkur franchise.

Ford's failure to properly market Merkurs — even with a separate franchise — was just the latest example of the inability of the Big 3 to successfully sell captive imports in their dealerships.

Recent automotive history — dating from the 1950s — is cluttered with failed captive import efforts. At Ford, the body count includes the English Ford Anglia, Pantera from Italy, Toyo Kogyo-built Courier from Japan, Fiesta from Spain, Taunus and Capri — plus Scorpio and XR4Ti — from Germany.

Ford is by no means alone. The General Motors list of defunct captive import ventures includes Vauxhall from England, Isuzu-built LUV from Japan, Opels from Germany and Japan.

The Chrysler fatality list includes Chrysler Simca from France, Sunbeam Imp and Sunbeam Tiger from Rootes Motors in England and Crickets from Britain.

Currently, Ford sells the Ford Festiva from Korea and Mercury Tracer from Mexico, while GM sells Pontiac LeMans from Korea and Geo from Japan, and Chrysler sells Plymouth and Dodge Colts from Japan plus Chrysler's TC by Maserati from Italy. Chrysler is also scheduled to get a Hyundai soon.

Chrysler's Mitsubishi-built Colts seem to be the most established of the remaining captives. LeMans, Festiva and Tracer are less than overwhelming successes, and Chevrolet has yet to convey exactly what a Geo is — short of implied claims that it is a latter day Honda or Toyota.

It is true that every captive import sale in a Big 3 showroom means revenue for the dealer and the factory. But it certainly is not clear that captive import sales represent incremental business; some captive import sales undoubtedly are conquests, but many seem to simply transfer sales from domestic models to captive models on the same showroom floor.

After the Merkur debacle, it should be painfully clear that a Big 3 showroom is not the ideal place to sell an import, because import buyers don't shop there.

Perhaps after three decades of repeated failures, the Big 3 should reassess the situation.

Tokyo: an interesting place for a show

Just about everyone who is involved with building, designing or selling automobiles — in fact, just about everyone who has anything to do with cars — should show up sooner or later at the Tokyo Motor Show.

To understand Japanese cars and the Japanese, we should see Japan and the show every now and again and see how the system and the culture really work. Putting it simply, it is mind-boggling.

People who have a frame of reference for motor shows around the world realize just how awesome the Tokyo Motor Show is. The Japanese producers display more show cars, concept cars and new products than can be believed.

If you have any doubt about the resolve of the Japanese to be not just a player but the biggest player in the automobile business, then a week in Japan during the auto show will relieve you of that doubt. They are good, and they continue to get better.

A few years ago, I said that the competition with the Japanese auto companies is like the Indianapolis 500. All the Japanese are bunched together on the back straight, and the rest of the world is bunched together on the front straight. The Japanese are going like crazy trying to catch up with the rest of the world — they don't realize that they are a half lap ahead.

Keith E Crain

The race is considerably closer today than it was a few years ago. But anyone who believes that the Japanese are slowing down so the rest of the world can catch up is sadly mistaken. They continue to innovate, and their execution of new products is nearly perfect. They continue to rewrite the rules on management style. And the product development time continues to shrink.

And yet with all the strengths the Japanese enjoy, there is a growing discontent with their own lifestyle. A week in Tokyo gives the visitor some small concept of the challenges that lie ahead.

The cost of living in Japan is still one of the highest in the world. As the executive moves up the ladder, it grows increasingly difficult to enjoy that increased income. The cost of living hits the visitor right away: The cab from the airport sets you back about $150.

I have a friend who went down to have breakfast in one of the downtown hotels. When he saw how much breakfast was going to cost, he decided to buy a watch instead.

But save your money and plan to come to the Tokyo show one of these days. You may or may not like what you see, but you will be a lot wiser for being there.

The Audit Bureau ABP

Auto trade deficit up as exports plunge 42%

WASHINGTON — The U.S. trade deficit for cars and light trucks increased 12.5 percent in July due to a 42.4 percent drop in the value of exports. The value of imports increased 4.2 percent for the month.

The latest figures from the U.S. Commerce Department show the automotive trade deficit in July was $3.57 billion, compared with $3.18 billion in July 1988.

The annualized U.S. automotive trade deficit grew 4.8 percent in July to $45.54 billion. The deficit for the 12 months ended July 1988 was $43.44 billion.

The number of cars imported during July declined 2.1 percent from a year ago, falling to 298,396 units with an estimated value of $3.28 billion. Imports of light trucks increased 15 percent for the month to 66,972 units with an estimated value of $614.6 million.

The number of cars exported during July fell 61.3 percent from a year ago to 17,587 units with an estimated value of $230.8 million. Exports of light trucks dropped 24.3 percent to 7,294 units with an estimated value of $92.95 million.

July's big drop in the value of U.S. exports was reflected in a 66.7 percent decline in the value of car exports to Canada for the month, a 25.2 percent drop in the value of car shipments to Japan and a 14.5 percent drop in the value of car exports to countries labeled "others" by the Commerce Department.

The value of light-truck exports to countries identified as "others" fell 65 percent. The value of light-truck shipments to Canada increased 10.7 percent for the month.

In the 12 months covered in the report, U.S. exports fell 15.2 percent, from an annualized total of 903,352 units as of July 1988 to 766,219 in July 1989.

Imports of cars and light trucks also declined on an annualized basis, but from a much higher base. The number of vehicles imported for the year ended July 1988 was 5.31 million. That number fell to 5.2 million for the year ended July 1989.

Imports of Japanese cars were down 1.6 percent in July, while imports of Japanese light trucks almost doubled, to 37,861.

Imports of cars from Canada were up 8.0 percent, while Canada's truck shipments fell 26.4 percent.

West German car imports dipped 14.1 percent in July, to 15,597 units.

The number of cars shipped from South Korea fell 47.4 percent in July, to 13,640.

Swedish car imports increased 0.4 percent to 9,821 in July. Swedish imports were up 3.4 percent on an annualized basis.

Mexico boosted car shipments to 18,795 during July. Mexico shipped 12.2 percent more cars to the United States in the year ended July 1989 than it did the previous year.

Yugoslavia sent two cars to the United States in July.

Car shipments from the United Kingdom were down 28.8 percent from July a year ago.

Italy has been shipping significantly more cars to the United States. In June, 921 cars were imported, compared with 199 a year ago. In July, 1,006 vehicles were shipped to the United States, compared with 414 in July last year. Italian car imports grew 8.8 percent on an annualized basis.

France shipped 68 cars to this country in July, compared with 2,029 a year ago. French imports were down 34.5 percent on an annualized basis.

Brazilian car shipments were down 4.8 percent to 4,976 units in July, and were down 34.2 percent on a 12-month basis.

Countries classed as "others" sent 2,529 cars to the United States in July, up from 2,338 a year earlier. On an annualized basis, those shipments increased 27.2 percent.

Canada's automotive trade edge over U.S. moves up in first half

OTTAWA — Canada's automotive trade surplus with the United States rose to $2.8 billion ($2.4 billion U.S.) during the first six months of 1989, a $1.4 billion ($1.2 billion U.S.) increase over the same period last year.

Statistics Canada reported exports of cars, trucks, parts and other motor vehicles to the United States were up only 1 percent, to $19.4 billion ($16.6 billion U.S.) between January and June, but imports dropped 7 percent, to $16.5 billion ($14.1 billion U.S.).

Exports of cars from Canada to the United States dropped to $8.2 billion ($7 billion U.S.) this year, but truck exports rose to $4.1 billion ($3.5 billion U.S.). Parts exports went up to $6.7 billion ($5.73 billion U.S.).

The United States was the source of 65 percent of all cars imported by Canada, while Japan contributed 27.7 percent and West Germany 1.7 percent.

Adding in its business with other countries, Canada's balance of automotive trade dropped to a surplus of $1.5 billion ($1.28 billion U.S.), down from $2.7 billion ($2.31 billion U.S.) in the first half of 1988.

Hughes buys electro-optics unit

LOS ANGELES — Hughes Aircraft and Perkin-Elmer Corp. have signed an agreement whereby Hughes will purchase Perkin-Elmer's electro-optics technology division.

Hughes, a subsidiary of General Motors, designs and produces electro-optical sensors, laser systems and associated data processing systems used by the military. The electro-optics technology division is a provider of electro-optical systems used in science and the military.

The division built the optical telescope assembly and fine guidance system for NASA's Hubble Space Telescope, scheduled for launch aboard the space shuttle in 1990.

Terms of the agreement were not disclosed.

million-dollar investments in the operations — located as close as five miles — and stolen sales from Carpenter Chevrolet.

Chevrolet refused to comment on Carpenter Chevrolet because of its policy not to discuss specific dealerships. The division said only that the market has become very competitive, and some dealers have to decide if they want to stick with the business or move on.

Carpenter, who will retire when the dealership is sold, said he consulted with an attorney and with National Automobile Dealers Association representatives well versed in GM's Dealer Improvement Program. He concluded it wasn't worth the battle because GM could automatically cancel the franchise next year anyway.

GM's franchise agreement with its nearly 10,000 dealers expires next fall. GM can opt not to renew a dealer's franchise at that time.

"We felt there was nothing we could do about it — nothing but sell," said Carpenter. "We decided to sell it while we could still get something out of the business."

GM reactivated the Dealer Improvement Program in 1988 after a steady drop in sales and market share. GM has said only its lowest performing dealers were put into it.

Nevertheless, many dealers have argued the same points with GM that Carpenter did.

They say GM's formula for determining how many vehicles a dealer must sell is baffling and not always fair. It fails, they say, to reflect changing local conditions.

As NADA's GM line group chairman, Dick Smith of Royal Oldsmobile in Charleston, W.Va., had been an outspoken critic of the Dealer Improvement Program. But he said the pressure he and other dealers put on GM to better implement the program has paid off. He said he hears fewer complaints about it now than a year ago.

"The way they implemented it early on is what I was opposed to," he said. "It looked like a hammer."

At a recent meeting of top representatives of dealer groups, participants agreed that GM now seems to be helping dealers correct their problems rather than threatening them with the loss of their franchise, he said.

Smith said a weeding out of the GM dealer ranks is inevitable. And, when the GM franchise agreement expires a year from now, GM likely won't renew some franchises, and some dealers may opt not to renew.

"GM had nearly 10,000 dealers when they sold 50 percent of the market," he said. "And they still have 10,000 now that they are selling 35 percent."

Meanwhile, Martin L. "Sonny" Hancock Jr. will take over Carpenter Chevrolet, a downtown Durham, N.C., fixture since it opened. His son, Martin L. Hancock III, will be general manager. The dealership will be named Sonny Hancock Chevrolet of Durham.

In 1893, brothers J.E Carpenter and J.W. Carpenter with their father, Duane Carpenter, formed a partnership to deal in a variety of businesses, including wagons and buggies. In 1910, they began selling cars and trucks. The family became the first Ford and Dodge dealers in Durham, adding the Chevrolet franchise in 1915. Throughout the years, the family sold Reo, Pullman, Oakland, Oldsmobile, Liberty and Elgin vehicles.

The fifth generation Carpenter, M.G. Carpenter III, said he will move on to other business ventures after the sale of the dealership.

PROFITS

FROM PAGE 1

Excluding the one-time, after-tax gain of $309 million on the sale of 75 million shares of Mitsubishi stock, Chrysler had $22 million in net earnings; its Chrysler Financial Corp. subsidiary earned $76 million for the quarter.

"We had a moderate loss on car and truck operations in the third quarter," conceded Robert S. Miller Jr., Chrysler Corp. executive vice president and chief financial officer.

He said the loss was the first since Chrysler's turnaround, following its brush with bankruptcy earlier in the decade.

Analysts speculate that GM lost $300 million in its North American automotive operations. The automaker is mum on the subject.

"For the first nine months of the year, GM is definitely in the black," said a spokesman.

The decline in third-quarter earnings apparently was kindled by the high cost of incentives.

Miller said Chrysler's average $1,000-per-vehicle cost for retail and fleet incentives was double the cost of incentives for the third quarter of 1988.

Ford pegged its average per-vehicle incentive cost at $800 for the quarter, adding that reduced production also was a factor in its earnings dip.

GM denied that its average per-vehicle cost for incentives hovers around $1,500, a figure suggested by competitors. "That's way out of line," said a GM spokesman. He declined to be more specific.

The auto industry's fourth quarter may turn out to be just as lackluster. Although better than the third quarter, it will be worse than a year ago, say analysts.

"It's clear the economy is slowing down and competition is intensifying," said David McCammon, vice president finance and treasurer of Ford Motor Co.

Chrysler is even more uncertain about the future. "We don't know where it is going because we are scheduling on a week-by-week basis," Miller said. "We have to play it very short term."

Ford earned $477 million in the third quarter, down 44 percent from last year's record $856 million.

Worldwide sales and revenues were $20.2 billion, down $139 million from third quarter 1988.

Ford's worldwide automotive operations earned $287 million in the third quarter, down $377 million from last year, on sales of $17 billion. Outside the United States, automotive profits were $324 million, up $1 million from a year ago.

The company's U.S. automotive profits for the first nine months of the year were $1.2 billion, down 36 percent from 1988.

Ford's third-quarter earnings form its financial services group were $190 million, down from $193 million for the 1988 period.

Chrysler had third-quarter earnings of $331 million, compared with $113 million last year. Worldwide sales and revenues totaled $7.88 billion each year.

Chrysler Financial Corp. reported third quarter earnings of $76 million, up 29 percent from $59 million in 1988.

GM reported a 40 percent decline in profits to $517 million in the third quarter on sales and revenues of $28.8 billion, compared to $859 million on sales and revenues of $28.2 billion last year.

General Motors Acceptance Corp. had profits of $234.5 million, down 3 percent from $241.9 million for the 1988 quarter.

Electronic Data Systems, GM's Dallas-based computer and communications subsidiary, had net profits of $110.9 million in the third quarter, up 16 percent from $95.9 million a year ago.

Sales climbed to $1.37 billion for the third quarter from $1.22 billion for the third quarter in 1988.

GM Hughes Electronics Corp. earned $148 million on revenues of $2.6 billion during the third quarter of 1989, down 18 percent from $180 million on revenues of $2.6 billion last year.

Automotive News Staff Reporter Mary Connelly contributed to this report.

and employee lease-vehicle volume, said Wayne Snyder, used-vehicle sales and marketing manager.

Toyota's goal is to triple its daily rental fleet sales from 20,000 to 60,000 vehicles in 1990 by using buybacks, Miller said.

Toyota hopes to avoid dealer protests about "subsidized prices" for daily rental fleets by channeling the buybacks to its own dealers, giving them a source of late-model used Toyotas.

Volkswagen, the only European importer involved in buybacks, expects to increase its involvement next year.

"It's a little difficult to forecast volume because we don't have as much control over production as domestics," said Edward A. Ray, remarketing manager for Volkswagen Credit. He said VW daily rental fleet sales increased to 5,500 in 1988 from 2,500 in 1987.

Wholesale used-car auctions have achieved double-digit percentage growth, fueled by manufacturers selling off buybacks and employee lease vehicles and by banks and other lenders selling returning leased vehicles.

National Auto Auction Association members sold six million vehicles for more than $25 billion last year, said Larry Brasher, outgoing president of the association and owner of Brasher Sacramento (Calif.) Auto Auction.

That volume will grow 7-12 percent in 1990, he forecast.

Auction chains are dominated by three companies that own 18 to 24 auctions apiece — General Electric Capital Auto Auctions, Manheim Auctions and Anglo American Auto Auctions. They are starting to compete more directly against independents instead of among themselves.

GE Capital intends to take the initiative among chains in launching a series of new financial products aimed at new-car dealers, said Liese Spiegelberg, vice president of sales and marketing.

GE Capital is testing a floor-planning program for new-car dealers at several auctions. The program is offered through Commercial Automotive Financing, a GE subsidiary.

Plus 10, a GE line of credit that allows dealers up to 10 days to pay for auction purchases, is being expanded for smaller customers.

Auction Plus, a new program that helps small fleet operators place used cars at advantageous auctions, started this month.

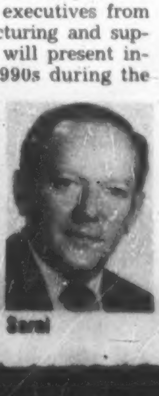
National Auto Auction Association officers for 1989-90 are Omar Landis, president; Tony Wolfe, president-elect; Larry Hedrick, vice president; Ray Clanton Jr., secretary-treasurer; and Brasher, chairman of the board.

CONGRESS

FROM PAGE 1

The 14th Automotive News World Congress will be held in conjunction with the North American International Auto Show and is expected to attract automotive leaders from around the world. Internationally acclaimed automotive experts and executives from both the manufacturing and supplier community will present insights into the 1990s during the four-day event.

Poling



Sarni

Poling has been one of the chief architects of Ford's turnaround in the 1980s. He became executive vice president of Ford's North American automotive operations in 1980 after serving as president and then chairman of Ford of Europe in the late 1970s. He was Ford Motor president and chief operating officer from 1985 to 1987. As vice chairman, Poling oversees all of Ford's main business groups — automotive, financial services and diversified products.

Sarni was elected chairman of PPG Industries in November 1984. He was vice chairman of the Pittsburgh-based company from January to November of that year.

He joined the company in 1968 as vice president of marketing in the former industrial chemical department.

PRODUCTION

BEST AVAILABLE COPY

Car output climbs 2% o 146,971

By Kathy Boyer
AUTOMOTIVE NEWS STAFF REPORTER

U.S. automakers scheduled production of 146,971 cars last week, 2.42 percent above the prior week but 9.46 percent below the year-ago week.

So far this year, 5,788,528 cars have been assembled, 1.21 percent below last year's total at this point.

Last week's estimated production was split as follows: General Motors, 44.71 percent; Ford Motor Co., 26.82 percent; Chrysler Motors, 11.19 percent; Honda of America Manufacturing, 5.08 percent; Mazda Motor Manufacturing (U.S.A.) Corp., 3.05 percent; Toyota Motor Manufacturing U.S.A., 2.76 percent; New United Motor Manufacturing Inc., 2.59 percent; Diamond-Star Motors, 2.37 percent; and Nissan Motor Manufacturing Corp. U.S.A., 1.43 percent.

Targeted truck assembly last week totaled 72,360, up 1.84 percent from the previous week but down 19.01 percent from the year-ago week.

Last week, Chrysler idled its St. Louis (No. 1) plant for one month due to lagging sales.

The St. Louis facility builds the Chrysler LeBaron J and Dodge Daytona models and is scheduled to reopen Nov. 20.

Chrysler's Toledo, Ohio, Jeep plant is slated to reopen today, but the Grand Wagoneer line is not scheduled to resume output until Nov. 6.

The plant was closed due to high inventory.

GM's Arlington, Texas, plant is down this week because of high inventory. It will reopen Nov. 6.

GM idled its Detroit truck plant last week because of slow sales. The plant is expected to resume operations Nov. 6.

GM's Linden, N.J., and Fairfax, Kan., plants resumed output today. Slow sales forced the company to idle the facilities. The Wilmington, Del., plant remains closed until Nov. 6.

Ford's Kentucky truck plant in Louisville was expected to reopen today. The plant was down because of bulging inventories.

Canadian cars show strength

While U.S. automakers trailed last year's output, Canadian automakers planned to crank out the highest weekly production since mid-1988.

Targeted car output last week was 26,306, the highest for any week since the 27,192 units built the week ended June 11, 1988.

Truck production was scheduled at 20,998 units, 1.87 percent above the prior week but 2.20 percent below the year-ago week.

Year-to-date, 788,722 trucks have been assembled, 2.73 percent more than last year's production at this point.

Chrysler Motors' Bramalea, Ontario, plant resumed output of the Premier last week. The plant was closed for two weeks due to slow sales.
